## To Put on Flesh and Increase Weight

GOOD ADVICE FOR THIN PEOPLE  
"I'd certainly give most anything to be able to gain a few pounds and stay that way," declare many thin men and women. Such a result is usually not impossible despite past failures. Most thin people are victims of mal-nutrition, a condition which prevents the fatty elements of food from being taken up by the blood as they are when the powers of nutrition are normal. Instead of getting into the blood much of the fat and flesh producing elements stay in the intestines until they pass from the body as waste.  
To correct this condition and to produce a healthy, normal amount of fat the flesh making elements must be so prepared in the digestive processes that the blood will accept and distribute them throughout the body. There is a preparation called Sargol, which works on this basis and which is sold by nearly every druggist on a positive guarantee of weight increase or money back. Hundreds have testified to weight increase from its use.  
Sargol does not itself make fat but is simply a combination of ingredients of acknowledged merit that, taken with meals seems to better enable the digestive organs to separate the fatty elements of the food and to prepare them in a form which the blood can readily absorb. Sargol comes in tablet form, is pleasant and easy to take and its action is perfectly natural and harmless. Sargol is sold by George A. Gorges and druggists everywhere who are authorized to refund the full purchase price if weight increase is not obtained.  
NOTE—Sargol is recommended only as a flesh builder and while it has produced excellent results in cases of nervous indigestion and general stomach disorders care should be taken by those using it who do not want to increase weight.—Advertisement.

The Next Advance in Coal Prices Will Be on September 1  
Don't neglect this opportunity to get your fuel at a lower price while, at the same time, you are able to get better quality.  
Usually lower prices means lower quality of goods.  
Not so with coal. Prices are lower in summer to stimulate buying when there is no natural demand.  
The first cold day will send a rush of orders to the mines. This will mean less time given to the preparation of the coal, the slate will not be as carefully picked out, the coal will not be screened as nicely and frequently the size is smaller.  
Better order to-day before you forget.
