## Make More Than a Dollar a Year Net From Each After Paying For House and Everything

## Money-Making Opportunities Open to Those Who Will Give Chickens Good Care

By Prof. Harry B. Lewis, Head of the Department of Poultry Husbandry at the New Jersey State College of Agriculture and Agricultural Experiment Stations.

COPYRIGHT, 1915.

Many schoolboys are making spending money by keeping poultry, and almost any student can add to his income in this way. In this article Professor Lewis tells the actual experiences of two boys who in one year got \$95.03 for the eggs produced by 18 pullets.

**A**SHER ALLISON and his brother Henry wanted to earn money of their own, so last year they proposed to their father that he help them to start keeping poultry. He agreed and the boys, one 15 and the other 12 years old, went to work with a will and under the guidance of their father with the help of many circulars and bulletins which they received from the New Jersey Experiment Stations, they made their work a marked success. The following facts pertaining to their management and results may be helpful to others who are about to start keeping poultry.

It was about the middle of July, 1914, that Asher made a small plan of the poultryhouse which he wanted to build and sent it to the Experiment Station for suggestions. The plan was looked over and a list of the material needed in building it was forwarded, together with a few minor criticisms.

The lumber was bought from a local lumber dealer at a cost of \$14, and the boys built a small shed, about eight feet wide by ten feet deep. They put a large muslin curtain in the center and a glass sash in the west end of the house, to let in sunlight and to give plenty of fresh air. The house was built on posts, the floor being two feet above the ground. A small yard ten by twenty feet was built of ordinary poultry netting at small cost. The area enclosed was a fine green grass sward, which gave the birds lots of green food.

Upon the completion of the house the boys visited a farmer, about a mile from the small city where they lived, and after explaining their plan, bought from him eighteen Barred Plymouth Rock pullets, which were nearly mature, at a cost of 70 cents each. These were placed in the house on July 25, and on August 1 the boys began to keep an accurate record of what they fed to the birds and the eggs laid.

**Method of Feeding.**  
The feeding practice which the boys used consisted of keeping before the birds at all times a dry mash and giving them a ration of a small amount of grain in litter every morning and night. A commercial dry mash hopper was purchased and a ration containing equal parts of wheat bran, wheat middlings, ground oats, corn meal and gluten meal, together with 10 per cent. of meat scrap, was placed in the hopper. This ration the boys bought ready mixed from a local grain dealer.

In the morning about 7 o'clock the birds were given about 1 1/2 pounds of wheat, and usually about 4 o'clock, as soon as school was over, 2 1/2 pounds of a mixture of half wheat and half corn was scattered in the litter of straw and leaves, which was always kept thick and coarse over the entire floor.

Plenty of clean water was kept before the birds and they were fed all the green grass and sprouted oats that they would clean up quickly. Scraps from the kitchen, such as also, and made it possible to cut down at times on the grains.

Asher kept the records and handled the accounts, while Henry collected the eggs and made most of the deliveries to customers. Both boys attended to the feeding and the care of the yard and house. All of the eggs which were used by the family were paid for at regular store prices. Considerable trade was built up in the immediate neighborhood, as the community knew of the boys' project and was eager to get first class eggs, strictly fresh, at a most reasonable price.

**Record of Year's Egg Yield.**  
The pullets were well-bred birds, strong and vigorous so that they responded well to the good care and attention which were always given them. The daily record was kept carefully together with the selling price and the cost of all material purchased. The following is the monthly egg record as sent to me by these amateur chicken men:

Month	Eggs
August	98
September	182
October	189
November	251
December	291
January	308
February	401
March	401
April	420
May	380
June	348
July	210

Total for the year ..... 3354 eggs or 279 1/2 dozen.

This is a remarkable yield and in fact is much above the average. It could not have been secured unless the birds had been first class and the boys had taken the best of care of them. The flock averaged 184 eggs per bird for the year, their best month being April, when they laid an average of 14 eggs a day. One pullet died in June, but this was the only loss in the year. A wet spell in February resulted in a few colds, but these were soon checked before damage had been done.

The average price received for the eggs was thirty-four cents a dozen, which netted the boys \$95.03. For some eggs they received as high as 55 cents a dozen, while in April and May they had to take as little as 21 cents for a few.

**Expenses For the Year.**  
The money paid out on account of the house and care of the flock was as follows:

All material for house	\$17.00
Fencing and posts	4.10
Hoppers, pails, hoe and shovel	4.89
Electric light	12.60
Feed purchased (not including table scraps)	28.80
Litter	1.40
Miscellaneous, string, egg boxes, etc.	4.18
Total expenses	\$72.97

Subtracting this amount from the gross returns of \$95.03 I was surprised to see that the boys had cleared a net profit for the year of \$22.06 or a lit-

### THE RUSSIAN RETREAT—AS RUSSIANS SEE IT

Russia has no intention of letting Germany keep the upper hand in this matter of weapons and munitions. Already from three directions new supplies are pouring into her battle fronts; from the north, the port of Archangel, which will very soon be supplemented by a new ice-free port on the Lapland coast, kept open all the year by the warm current of the Gulf Stream which bends round the north of Norway, and in process of being joined by railroad to central Russia; from her Pacific ports, whence a continuous supply—interrupted at a critical moment for Russia by the threat of trouble in China—is once again pouring along the Trans-Siberian railroad, a supply steadily increasing in volume, under the stimulus of Russia's former rival and present ally on the Pacific; and from the third source, the machine shops and factories of Russia herself, which are being pressed to the utmost possible output by the very remarkable movement

which is popularly called "the mobilization of the Russian nation." Whether yet a fourth source will shortly be added, coming through the gates of the Dardanelles, is a secret which lies in the lap of the gods.  
A concluding word: Such is the retreat, as Russians see it. How, in their hearts, do the really wise and far-sighted men in Germany see it? What face does it bear to them, with the early winter already upon them, the first frosts announcing the time close at hand, when iron ground will make the digging of trenches well-nigh impossible, when snow-drifts will pile near the bottom of the purse. Do they foresee already, with startling clarity, that their army of invasion has come to stay?—that the world-war, as they prophesied is really being decided on the eastern front, though not in the sense of their prophesies? If there be men in Germany with genuine

foresight and wisdom, I think they regard the retreat of Russia's armies with a dismay akin to terror.—Charles Johnston in the North American Review.

### HOPE FOR ALLIES' SUCCESS

Paris, Oct. 16.—Earnest hope for the hope of the allies was expressed by former Premier Venizelos of Greece, who asked for the Athens correspondent of the Matin to express his opinion of the refusal of the new Greek government to send an army to the assistance of Serbia.

### CARSON SAID TO HAVE QUIT

London, Oct. 16.—Notwithstanding the recent denial of Sir Edward Carson, the attorney general, that he had resigned, the assertion is made by the parliamentary correspondent of the Daily News that he has given up his office. Announcement to this effect is withheld by the government, the correspondent says, because of its hope that in the interests of unity he may be persuaded to withdraw his resignation.

# Majestic's Chimpanzee Is An Expert on the Motorcycle

Don't get it into your heads that in these days of modern progress the monkeys are falling behind. King, the chimpanzee with the human brain, who is to be one of the features at the Majestic theater the first three days of next week, is an expert motorcyclist. King is the first monkey that ever accomplished this feat. And there are many other things in King's repertoire that will strike the audience as amazing! During his stay in the city King plans on going riding on his motorcycle in the streets, also taking jitney rides and shopping in the city stores.—Adv.

Regularity of quality for 24 years is surely a reputation that hits home every time.

Your wife asks for the things she knows are good in the store—why don't you?

Regularly Good For 24 Years

## Where Do YOUR Table Scraps Go?

You can turn them into eggs and chicken dinners by keeping poultry in your back yard.

The International Correspondence Schools will show you how to make more money with a home poultry flock. Or they will fit you to conduct a large and profitable poultry farm, by training you in the methods used by the most successful poultrymen.

### \$2 a Year Profit From Every Hen

Fresh eggs are higher in price every year. Poultry raisers who know how to sell the year around—at top prices. Broilers and roasters pay big profits when grown, fed and sold right. Poultrymen who use scientific methods make every fowl earn \$2 a year.

Hundreds of money-making amateur poultry raisers owe their success to I. C. S. training.

**"To the I. C. S. Course in Poultry Farming I attribute my success in raising 1,000 fine pullets," writes Mrs. Jean E. Weaver, Vineland, N. J. "From the I. C. S. Course I learned how to handle hens with the least labor and best results. My pullets began laying when 5 months old and have continued to lay well. If all women interested in poultry would enroll for your course, poultry profits would increase 50 per cent the first year. The knowledge that I gained enables me to make my business highly profitable."**

### Poultry Book Sent Free

A 56-page book, full of information valuable to every one who owns or expects to own poultry, will be sent on request. This book tells how the International Correspondence Schools can protect you against failure and make your success in poultry keeping quick and sure.

# Out in Indianapolis

LAST week one of her large department stores remembered the birthday of James Whitcomb Riley with a gracious tribute to that old, young poet, in the most prominent place of its advertisement.

Those words were the song of a big Hoosier heart; proud to live "where the world is so wealthy"; proud of Indianapolis; proud of its neighbor—Riley.

When you read of such community pride floating over the backyard fences of that great city, doesn't it make you feel like reaching out and patting the backs of our own whole-soul, unselfish citizens and neighbors who have toiled and are still toiling to elevate and make Harrisburg a wonderfully fine place in which to live!

We'd feel out of order if we weren't dressing up our store to conform with the improved beauty of our city; and make it a useful medium through which the desires of her citizens may be fulfilled.

GOLDEN C AMPINES

COPYRIGHT, 1915.

The Campines have been bred in Belgium for centuries and have achieved wide popularity throughout Europe because of their heavy egg production. There are Silver and Gold Campines, and both varieties lay white eggs of good size, and, like the Leghorns, seldom become broody.

The Golden Campine is a handsome fowl, about the same size as our Leghorns. It is alert and active and its

brilliant golden body and color, contrasting sharply with the intense greenish black barring, is much admired. Its lobes are white and combs single, falling over to one side on the female. The Campine male is hen-feathered; that is he does not possess the long-flowing, sharp-jointed hackle and saddle feathers usually seen on a male, nor the long curving sickles of a cock, and he is colored exactly like the hen.

THE SUPER-WIRELESS

"It is a wonderful thing when God lays his hand upon a man's shoulder and says, 'I want you.'" There is

more than one dollar per bird. This is especially gratifying in view of the fact that the house is paid for out of the first year's receipts and the purchase price of the birds is covered as well. The birds can be sold later as meat and will thus swell the income.

These are excellent results and somewhat exceptional, but they will serve to give you some idea of what is possible in your case if you have a personal liking for poultry, and if you are willing to put in considerable time in caring for them and to study them constantly to see that they are given every care. Results in our boys' work about the State show many cases the reverse of this and others nearly as good, so that I cannot but point out the danger of being too optimistic. Success will accompany your efforts and you will have a mighty fine time at it if you make sure that the following conditions are present:

First, that you really want to do it and are willing to put in time and study on it.

Second, that you secure strong, healthy birds with which to start.

Third, that you secure good sound advice as to the housing and feeding of the birds. These are the two fundamental factors in their care.

Lastly, such work will get you out doors with its many attendant advantages, fresh air to breathe, plenty of sunlight to make you strong and best of all a business in which you are interested and which is preparing you for a bigger business later in life. And this all in the spirit of play.

**How to Win Prizes at Poultry Shows**  
Success at the poultry shows depends upon the conditioning of the birds as well as upon their breeding. Next week Michael K. Boyer will tell how to prepare poultry for exhibition. The illustration, by Louis Paul Graham, will show Single Comb Diamond Jubilee Orpingtons.

**Pratt's Poultry Regulator** and Remedies prevent loss, increase production, enlarge profits. Standard for 44 years. Guaranteed satisfactory or money back. Our Poultry Information Bureau will help you solve your poultry problems. Take advantage of this expert free service. Valuable poultry book mailed free. 427 PRATT FOOD CO., Philadelphia.

# Pyorrhea—the disease nearly everybody has

No matter how sound your teeth may seem to be, no matter how you may scoff at the idea of your having this disease, it is a positive fact that the germ which causes it is working now in your teeth.

The appalling discovery of this fact—that the germ which causes pyorrhea is one which inhabits every human mouth—was made over a year ago. Since then dentists have been urging everyone to take special precautions in their daily toilet to prevent this disease from developing in its acute form of bleeding gums, tenderness in chewing and loose teeth.

To meet the need for such a daily treatment and to enable everyone to take the necessary precautions against this disease, a prominent dentist has put his own prescription before the public in the convenient form of Senreco Tooth Paste.

Senreco contains the best corrective and preventive for pyorrhea known to dental science. Used daily it will successfully protect your teeth from this disease. Senreco also contains the best harmless agent for keeping the teeth clean and white. It has a refreshing flavor and leaves a wholesomely clean, cool and pleasant taste in the mouth.

Start the Senreco treatment tonight—full details in the folder wrapped around every tube. Symptoms described. A 25c two oz. tube is sufficient for six or eight weeks of the pyorrhea treatment. Get Senreco at your druggists today, or send 4c in stamps or coin for sample tube and folder. Address The Senreco Remedies Co., 505 Union Central Bldg., Cincinnati, Ohio.

# Buy GOOD Coal & LESS Coal

The better the coal you buy—the less you have to buy—and the less you have to buy, the lower becomes your aggregate coal expenditure.

Since all coal—good, better and best—costs the same per ton, don't you think it the part of wisdom to get the best for your money, and keep the total expenditure down?

Buy Montgomery Coal—its quality has been known for years—there is none better.
