You Are Wise To Buy Coal Now

Investigations show that throughout the nation a shortage of 12,000,000 tons of Anthracite is threatened.

It is a curious fact that the shortage is in sight despite the fact that the output of coal so far this year has been in excess of last year's production.

However, on January 1, 1916, there were in storage, as a reserve supply for the country 6,500,000 tons of Anthracite. On January 1, 1917, there was in storage not one ton.

If you want coal, remember that to produce and distribute it the mines must have miners and cars. If a serious coal famine is to be avoided next winter the relatively few miners and cars must be worked to the maximum this summer. This can be done only if the coal consumers take part of what they need this summer when the miners have time to mine it and when the railroads can transport it.

Last year the mines ran 230 days. This year to produce sufficient coal all the mines in the nation will have to run twenty-three more days in the next nine months than they were able to run in the corresponding period last year.

This means further that they will have to get, somewhere and somehow, the added cars to carry the coal. And Daniel Willard, President of the B. & O. R. R. says the nation will require 75% of the railroad facilities to win the war.

The job seems almost hopeless. Next Winter's fuel famine will likely be far more severe than last year unless you buy part of your coal this summer.

CANNING RULES ARE EXCHANGED BY HOUSEWIVES

YOU with hundreds of other housewives have successful methods of canning, preserving and drying foods and fruits, which have either been handed down to you from generations of your ancestors or which you have evolved. The feature of the HARRISBURG TELEGRAPH is designed to help you exchange your ideas with other housewives. Send your favorite receipts and methods to the editor and they will be placed before other housewives. In this way they can be placed before the public and do the maximum amount of good.

PRESERVING — CANNING — DRYING

without previous experience, and with no other equipment than that to be found in almost every home, anyone, adult or child should be able to can food satisfactorily by the methods which follow.

They are a combination of the best methods found by the Government and the housewives of Central Pennsylvania. By the methods various vegetables, soups, meats, fish and practically any other food or combination of foods can be canned, as well as fruits and tomatoes, the products most commonly canned.

The simple, general rules necessary for successful canning, by the one period, cold pack methods will be given.

Homemade Outfits

Homemade outfits are constructed of such utensils as wash boilers, tin pails, milk cans, metal washbaths, and lard pails. Such canners should have well-fitting covers and false bottoms of lifting platforms of metal or wood.

Hot Water Bath Commercial Outfits

Hot water bath commercial outfits are constructed usually for door work, and have a sterilizing vat, lifting trays, firebox and smoke pipe, combined in one piece. They are light and convenient and are planned as portable outfits.

Water Seal Outfits

Water seal outfits consist of a double bath and cover which projects down into the water between the outer and inner walls, thus making a tight seal.
