Use Your Old Jars and Bottles

Jars and large-necked bottles can be capped with paper and paraffin, or, in the case of Jellies and stiffs, with wax. Small-necked bottles, for use in putting up fruit juices, can be sealed in the following manner: Make a cotton stopper, press it into the neck of the bottle and leave during the sterilization or boiling period. To sterilize, set the bottle in boiling water up to the neck and let it remain for 40 minutes at a temperature of 165 degrees F. Then remove the bottle, press the cork, which has been baked in the oven for one hour, in the top over the cotton immediately and dip the top into melted wax or paraffin.
