CONGRESS SITTING ON NEEDLES AND PINS

Administration Forces Insist on Immediate Passage of New Tax Bill.

(International News Service.)

Washington, May 14.—Congress today was sitting on needles and pins waiting a decision on the revenue question.

Senator Simmons, of North Carolina, chairman of the finance committee, and Representative Claude Kitchin, democratic leader of the house, were scheduled to confer today with Mr. McAdoo in an effort to persuade him to abandon his demand for immediate revenue legislation.

Despite the general desire for an early adjournment, many members of both houses today made it clear that Senator Simmons and Representative Kitchin were not voicing their attitude and expressed the hope that the secretary of the treasury would stand pat in his insistence on the enactment of new taxes.

"This was the sentiment of that element of congress which last year demanded the imposition of higher levies upon war profits to meet the financial burden of the war. It was the view also of Senator Lewis, of Missouri, democratic whip, newly elected to the finance committee.

"There are two strong reasons why congress should stay on the job and enact a revenue bill at this time. The first, and all important, is, of course, that the government needs the money.

"The second is that congress ought to keep the revenue question out of politics. If we pass the bill this summer, sufficient time will have elapsed before election to permit thorough explanation of the new taxes to the people. If we leave the revenue bill to go over until fall, it is almost sure to become a special issue and it will be framed partly for politics and partly for business.

Reports were afloat today that when the new measure comes in the country may be surprised at the increase of the levies upon war profits. The line-up in congress may be changed and some of those who championed the moderate rates upon war profits in the last revenue bill will find "the shoe on the other foot."

Reports were afloat today that when the new measure comes in the country may be surprised at the increase of the levies upon war profits.

TRI-STATES GOOD ROADS MEETING HELD AT MOBILE

BORGLUM, CAUGHT IN OWN NET, WILL NOW HAVE GREAT DEAL TO EXPLAIN

Letters Reveal Man Who Stirred Up Aircraft Charges as Disgraced Inventor.

(By David Lawrence.)

Washington, May 14.—Gutzon Borglum, the sculptor, who stirred up all the present fuss about the aircraft industry, will have a great deal to explain when confronted with documents now in the possession of the government.

A mass of letters and documents received by Mr. Borglum first as a disgraced inventor whose designs were provided unsatisfactory by official tests and second as a promoter of a private enterprise which he was organizing at the very time that he had in his pocket the letter from President Wilson giving him the right to look into the aircraft situation and make a report thereon.

This evidence has been brought to the attention of President Wilson and Secretary Baker and has been placed before the United States senate. It explains why President Wilson "backed down," so to speak, in April 1917, when he signed the bill which Mr. Wilson took the matter of investigation away from the sculptor and put it in the hands of men who, he was sure, were disinterested.

"First—That in all of the relations concerning the matter of promotion of the aircraft industry, during which I was present at several conferences with the projectors of this enterprise, as a consulting engineer, I desire to state that there never was any other understanding of this project than that Mr. Borglum was to be represented in the corporation by Mr. Harris and that his sole asset in the transaction was to be first, his personal friendship and association with President Wilson, whom he stated he could do anything he wanted with.

"Second—As a further asset in this commercial venture, Mr. Borglum stated and gave every one concerned in the matter to understand, that his position with the aircraft production board and the aerial section of the signal corps, U. S. A., was such that he could obtain the use of plans and technical details which his company could use and thus save considerably both in time and money in beginning operations.

"Third—That one of the partners of this concern was to have been Mr. Hugo C. Gibson, who is connected with the British ministry of war, in the United States, offices at No. 120 Broadway, New York city, who proposed that certain patents which he controlled would be used by this company and who also stated that he would be able to influence orders for airplanes in such a way that this company might receive the benefit therefrom.

"Fourth—That I was given to understand by Mr. Borglum that the present personnel of the aircraft board was highly dissatisfied to him and he was constantly criticizing their work, that he definitely proposed to change this personnel by virtue of his friendship with President Wilson and he wanted me to suggest members for the new board which would be more friendly to him in his projects. That I avowedly giving him any definite answer along this line. That in the event of a newly constituted aircraft board being formed there would then be no difficulty in securing advantage to the proposed organization.

"Dated Jan. 30, 1918. (Signed) HENRY HARRISON SUPLEE. The above is a true copy made by my own hand of the original statement which I dictated and signed on Jan. 30, 1918, of which statement only two copies were made and signed: One of these being delivered to the military intelligence section, United States army, and the other to Mrs. F. Hardesty, consulting engineer of Washington, D. C. Dated May 7, 1918. (Signed) HENRY HARRISON SUPLEE. Hardesty's Consulting Facility.

To understand the above it is well to remember that President Wilson gave Mr. Borglum a letter on Jan. 2, 1918, placing at his disposal facilities for investigation, and then, on April 15, the president specially repudiated Mr. Borglum as an official investigator.

Mix Gives Valuable Data. It is from Kenyon W. Mix, Jr., who, with his father, practically controls the Dodge Manufacturing company, that the real story of Mr. Borglum's attempt to use his friendship with the president to promote a private enterprise has been obtained.

Mr. Mix makes a sworn statement and submits documentary proof to show that Gutzon Borglum was to be represented in the new company by Benjamin Harris, president of the Standard Smelting and Refining company, of New York.

NATION'S INDUSTRIAL MANPOWER NORMAL

First Year in World War Has Not Depleted Ranks of Labor.

(Associated Press.)

Chicago, May 14.—The nation's industrial manpower has not suffered very serious depletion as a result of the United States' first year in the world war, so far as indicated in recent surveys of the general labor situation, conducted by the United States employment service and the Illinois free employment bureau.

The labor turnover so far this year has been greater than in previous years. This is attributed to some extent to unusual opportunities for individual betterment offered by plants working on war contracts.

On an average, 100,000 persons are obtaining employment through the Chicago district office of the federal bureau as compared with a total of 495,000 during the last fiscal year. The huge increase is accounted for by the receipt reorganization of the bureau for the mobilization and distribution of the country's labor. As such it has handled the applications of hundreds of thousands of workers registering with the public service reserve, including more than 250,000 mechanics for shipbuilding.

A system of daily surveys shows the bureau where the greatest shortages or surpluses exist and with this formation it is able to make economic distribution. Manufacturers are being urged to use the government agency as far as possible in order to reduce the labor turnover and uneconomic competition between industries essential to the war.

At the state employment bureau 4,000 persons sought work in March and there, too, the demand is in about equal balance with the supply, except in a few trades. Positions were found for nearly all the applicants.

The demand for women workers is said to be about normal. Only a few isolated cases have they replaced men called to the colors. A few plants engaged on war contracts have employed large numbers of women without difficulty.

Many women teachers are said to be leaving the schoolrooms for more remunerative employment and the draft has drawn so heavily upon the already scant supply of men teachers that several states report the situation alarming for next year. A survey of thirty-seven states just completed by the professional service division of the federal bureau shows that during the present school year West Virginia was forced to close between 150 and 200 schools because of the scarcity of teachers. In Montana and Wyoming about two dozen schools were closed for the same reason, while New Hampshire, North Carolina, Delaware, Mississippi, Alabama, New Mexico, South Dakota, Wisconsin and Indiana report a marked shortage. The bureau has 700 teachers' applications and 600 vacancies listed, and the percentage of those seeking positions, it is pointed out, are not qualified for work in the departments where the greatest deficiency exists.

Washington, May 14.—Disclosures of delay in the production of heavy ordnance for the American army will awaken the country in the same way as did the airplane fiasco, according to senators who are in touch with the secret investigation now being made by a senate subcommittee on military affairs, headed by Senator Hitchcock.

"The state of the quantity production of artillery for the United States will stifle the country, in my estimation," said a senator today who has looked into the disclosures already made in the inquiry. "The state of affairs that has been permitted to develop in the quantity production of artillery for the United States will stifle the country, in my estimation."

"The investigation now going on is already productive of information which, to say the least, reveals inefficiency."

Program Delayed for Months. Disclosures made show that, as in aircraft production, there has been useless and costly experimenting with established and known designs for guns and gun carriages with a view to turning out something that would be exclusively American and "beat the world."

This policy which at last has been abandoned, it is shown, was delayed for months, with the result that very few guns have been completed and quantity production will not come until the late summer on some designs and not until next spring on the heavy 9.2-inch howitzers.

The committee has discovered that up to the present time the actual production of 9.2-inch howitzers, 4-inch howitzers, and 6-inch howitzers, for which there is such pressing demand, has been practically negligible. It is worse with respect to the "heavies" than with regard to the 6-inch pieces, which, it is declared, is deplorable enough.

SAVES WOMEN FROM TORTURE. Put a few drops on a touchy corn, then lift corn out with fingers.

Your high heels have put corns on your toes and calluses on the bottom of your feet, but why care now? For a few cents you can get a quarter ounce of the magic drug freezeone recently discovered by a Cincinnati genius.

Apply a few drops upon a tender, aching corn and instantly, yes, immediately, all soreness disappears and shortly you will find the corn so loose that you lift it out, root and all, with the fingers.

Just think! Not one bit of pain before applying freezeone or afterwards. It doesn't even irritate the surrounding skin.

Hard corns, soft corns or corns between the toes, also hardened calluses on the bottom of the feet, to lift up and fall off without hurting a particle. It is almost magical. It is a compound made from ether, says a well-known druggist here.—(Adv.)

TELLS PITIABLE TALE OF WANT AND PRIVATION

Mississippi Minister for Twelve Years Had Eaten Hardly Enough to Keep Body and Soul Intact.

(Associated Press.)

Rome, Miss., April.—The Rev. R. B. Longford, D. D., a well-known minister of this city, recounts a deplorable tale of privation and misery. For twelve years he has been able to eat little or nothing and fell in weight from 180 to 155 pounds, owing to a severe case of indigestion due to a lack of proper assimilation of organic iron.

After having tried many remedies without any apparent relief, he was induced by a friend to try Acid Iron Mineral. After the second bottle, he reports he was entirely relieved. He yesterday said: "I took great pleasure in recommending A-I-M for both indigestion and pellagra. I suffered from both these diseases for many years, and am well on the road to recovery. I can now eat anything I like without any sign of indigestion whatever."

What Dr. Longford has to say of A-I-M is more repetition of that cited by many thousands of individuals throughout the United States, who during the past thirty years, have used this natural iron mineral water with marked success, and many of whom have frequently reported complete recovery after having tried every conceivable remedy on the market.

While its cost is mere trifles, the distributors of this marvelous remedy, the Ferrudine Chemical Corporation, are so confident of its success that they guarantee a refund of the purchase price.

A-I-M is in no sense a patent medicine or secret remedy. It is a natural mineral water, containing all the health-producing, tissue- and blood-building properties of a purely organic iron. Messrs. Froehling & Robertson, the well-known chemists of Richmond, Va., after a thorough analysis of this product, officially certify that the following ingredients compose A-I-M: Ferric Sulphate, Aluminate Sulphate, Magnesian Sulphate, Calcium Sulphate, Sodium Sulphate, Sodium Iodide, Sodium Phosphate, Silicic Acid, Free Sulphate Acid.

Acid Iron Mineral is on sale by all progressive druggists in the United States, Canada and Great Britain. The Fritts & Wicht Co., wholesale distributors for Chattanooga and vicinity.—(Adv.)
