Madagascar's Two Climates.
The island of Madagascar has two distinct climates, two classes of natives and two classes of fauna and flora. The island is about the size of France. Along the coast it is tropical and malarious, and the natives are darker than in the interior. The interior is a high tableland and mountainous. There the climate is cooler and the natives smaller and lighter in color than on the coast. But in the interior they are more intelligent, and they rule the island.
