

BOARD ISSUES REGULATIONS FOR PURE-BRED HERDS

Order Provides That Breeders Complying with Certain Rules May Ship Cattle Without Listing.

RANGE HEIFERS ALSO TO BE ADMITTED

Regulations regarding the establishment of the classification of pure-bred cattle herds that are tuberculosis-free have been announced by the state live stock sanitary board.

This step of the board will simplify much the exchange of pure-bred stock within the state, as well as the shipments to other states. A similar measure has been in force in Minnesota for six months with excellent results. Illinois, Wisconsin and Missouri have also adopted the idea.

Another move of the board that will be a boon to the live stock industry of the state is the adoption of the regulation admitting range heifers under certain conditions without the tuberculin test.

To Encourage Live Stock.

"We wish to do everything possible to facilitate exchange of live stock and to thus encourage the raising in North Dakota of more domestic animals," said W. F. Crewe, executive officer of the board. "But at the same time anything that would increase the risk of disease would not be advantageous. The establishment of the tuberculosis-free herds and admission of range heifers without the test we feel will not encourage contagious diseases, while it will make much easier dealing in live stock. It will give breeders of pure-bred stock who are careful of their herds state approval."

The regulations regarding tuberculin-free herds follow:

All cattle exceeding the age of six months in a herd eligible to official registration shall be subjected to physical examination and the tuberculin test administered by a veterinarian authorized by the state live stock sanitary board.

The owner must make application to the state live stock sanitary board in accordance with the provisions of Article 17, Political Code C. L. 1913.

Each herd will be classified according to the result of the initial and each succeeding test and designated as "Free Herds Belonging to Classes 'A', 'B', 'C'."

Free Herds—Class "A"
Shall consist of cattle, all of which exceeding the age of six months must successfully pass the initial tuberculin test and physical inspection, which shall be repeated annually.

Free Herds—Class "B"
A herd in which not to exceed 10 per cent of the animals react to the initial tuberculin test (provided all reactors are immediately removed from the herd and proper disinfection requirements complied with) shall be designated as a "Free Herd—Class 'B'", and thereby become eligible to Class 'A' after being subjected to and having passed an additional negative tuberculin test and physical examination within a period of not less than three or more than twelve months between the administration of the first and second tests.

Free Herds—Class "C"
A herd in which not to exceed 25 per cent of the animals react to the initial tuberculin test (provided all reactors are immediately removed from the herd and proper disinfection requirements complied with) shall be designated as a "Free Herd—Class 'C'", and thereby become eligible to Class 'B' under the foregoing provisions prescribed for that class.

In order to have continued official recognition herd must be tested annually by a veterinarian authorized by the state live stock sanitary board.

Cattle coming from outside the state cannot be given official recognition until tuberculin tested under the direction of the state live stock sanitary board.

It is recommended that all cattle added to "Certified Free Herds" should come from herds known to be free from tuberculosis.

Health certificates for cattle in "Certified Free Herds" will be issued as provided for in Chapter 64, Session Laws 1915.

Admission of Range Heifers.
The regulations regarding admission of range heifers follow:

strictly range bred heifers under the age of one year may be admitted into the state of North Dakota without requirement of the tuberculin test if accompanied by a permit issued by the state live stock sanitary board of North Dakota, and a certificate of health issued by an inspector of the United States bureau of animal industry or a graduate veterinarian, endorsed by state veterinarian in state of origin.

Provided purchaser waives his right to a tuberculin test chart health certificate.

Further provided that said cattle may be held at destination and be subjected to the tuberculin test under the direction of the state live stock sanitary board.

CROPS NEAR WILTON WILL BE EXCELLENT

Oats, Barley, Flax, and Corn Will More Than Make Up for Loss in Wheat.

(Special to the Tribune.)
Wilton, N. D., Aug. 29.—The crops in Wilton and vicinity, with the exception, of course, of the wheat, will be excellent this year. Beautiful fields of flax can be seen on the farms in this section of the state and the majority of the farmers will realize \$25 an acre on this crop alone. Oats and barley are fine and 1916 will be one of the banner years for these grains.

The wheat has been greatly affected by the ravages of black rust and the farmers will not realize from their crops of wheat what they have in the majority of the past seasons. Some will get as high as 12 bushels to the acre, which is not bad for the poor season experienced and the high cost of wheat this year.

Grain experts have visited the various fields of grain in this neighborhood and are firm in their opinion that the farmers will not suffer this year, inasmuch as the crops of flax, oats, corn, barley and others will more than make up for their loss of the normal crop of wheat that was expected. The corn is exceptionally good and many farmers have already commenced cutting. It is estimated that in one more week all of the corn will be ready for the market.

SCOUTS INVADE CAPITAL CITY

RL Emissaries Are Well Received When They Announce New Product.

Citizens who have been awakened from their siestas by bugle calls and have seen khaki clad figures with the letters RL stamped on their breasts rushing around the neighborhood are not to suppose that the Mexicans have arrived. The "martial looking" troop which some overly war-residents greeted with a fusillade from their salt and pepper guns as well as a demoralizing blast from the garden hose, has only the friendly purpose of announcing the arrival of a new product in this city.

The letters RL stand for Royal Lemon Washing Powder and the Scouts who induced the severe palpitation of the heart on the part of Eryanistic citizens are distributing samples of the new cleanser throughout the city. The new cleaning compound is said to be used on the well known cleansing properties of lemon. Now that the war scare is over and the trepidation of the greaser-fearing populace has subsided, the Scout samplers and the product they are distributing are receiving a royal welcome from the grocers and jobbers as well as from the housewives.

WEATHER FAVORABLE DURING PAST WEEK

The weather of the week was favorable for harvesting, haying and threshing. Harvesting is nearly completed, except flax. Haying is well advanced and the yields are above the average. Threshing made good progress, but the results were very disappointing, the yields ranging from four to twenty bushels per acre. The quality also is poor as a rule. Some fields were too poor to cut, while others were either out for hay or were used for grazing of livestock. Oats and barley are producing good yields, and flax is an excellent chop. Considerable flax has already been cut, and most of the crop is out of danger from frost. Many fields of corn are so far advanced that they are practically out of danger from frost. With two weeks more of temperature above freezing and the greater portion of the corn crop will have matured. The temperature for the week was nearly normal, but the precipitation was light. Grafton, Jamestown and Napoleon reported 0.20 inch of rain each; Wabpeton, Lisbon, Larimore, Pembina, Langdon and Minot 0.10 inch each, while Grand Forks, Fessenden, Bottineau and Bowbells reported amounts of 0.05 inch or less.

The nights of the 26th-27th and the 28th-29th produced exceptionally fine displays of aurora borealis (Northern Lights). This was especially true of the display on the night first mentioned. It is seldom that arcs of such magnitude are produced in this latitude, and especially so at this season of the year. Those who were fortunate enough to be out on Saturday night about midnight were treated to a sight that is seldom seen.

CROPS AROUND STEELE BETTER THAN EXPECTED

H. A. Welhitz, merchant of Steele, declares that the farmers around Steele are surprised at the good reports coming from the threshing machines which started work there Monday.

All of the small grain, he declares, are turning out better than expected. Your doctor will order you to smoke mild cigars. Try a Castellanos, 10c

CITY NEWS

J. P. La Grange, Ill., was here yesterday.

William Ewall of St. Paul is here on a business mission.

A. W. Bjorkman of Wilton was a business visitor of yesterday.

T. J. Ruff of Lahr, this state, spent yesterday in the city on business.

E. L. Olson of Stanton was in the city yesterday renewing acquaintances.

Melvin Muns of Velva and George Hogerot of Center were visitors of yesterday.

The Misses Hattie and Lillie Hanson of Washburn visited in the city yesterday.

J. A. Coulter and Miss Minnie Coulter of Dawson were here yesterday visiting friends.

H. T. Iverson of Jamestown was in Bismarck yesterday transacting business and visiting friends.

Taylor Thompson of Fargo, formerly state printer, was in the Capital City yesterday on business.

WALLACE TO GRAND FORKS.

SAXON "SIX"

A big touring car for five people

--and Saxon "Six" costs less to run than any other car of similar size

To those other superiorities of Saxon "Six" must be added that of unusual economy.

First, Saxon "Six" proved itself possessed of a great motor—a better motor than any other car in its class.

In speed, in power, in smoothness, and quietness this engine clearly excels.

Then—as time passed by and records were compiled—it became clear that Saxon "Six" had greater strength and endurance than any car of like price.

And of course its greater beauty was a conceded thing from the start.

Now it is known definitely that Saxon "Six" is—in addition to these other superiorities—a far more economical car than any of similar size and power.

Not only have owners proved this to be a fact by way of their private records of upkeep costs, but in public tests also has it been established.

And this economy of Saxon "Six" is a four-fold economy. What is true of its sparing

use of gasoline is also true in the matter of oil, of tires, and of repairs.

The most recent example of Saxon "Six" economy in gasoline consumption occurred when 206 stock model Saxon "Sixes" driven by dealers traveled 300 miles apiece without stopping, for an average of 23.5 miles per gallon of gas.

In this run it showed an average of 175 miles to the quart of oil.

It is more common than unusual for a set of tires to last beyond 6,000 miles.

And so far the average cost of repair parts for all Saxon "Sixes" during the past eighteen months is less than \$10 per car.

This certain and positive proof of Saxon "Six" superiority in economy is the final piece of evidence that establishes beyond fair dispute the right of Saxon "Six" to the title of the best car at less than \$1,000.

Come in and see Saxon "Six" today. Price, \$815 f. o. b. Detroit.

EVERYBODY NEEDS IT—stored for emergency in a well-developed, well-preserved, well-nourished body and brain.

GRAPE-NUTS food stands pre-eminent as a builder of this kind of energy. It is made of the entire nutriment of whole wheat and barley, two of the richest sources of food strength.

GRAPE-NUTS also includes the vital mineral elements of the grain, so much emphasized in these days of investigation of real food values.

Crisp, ready to eat, easy to digest, wonderfully nourishing and delicious.

"There's a Reason" for Grape-Nuts
