The Healdton Report

At Healdton, Okla., the oil field is showing a steady increase in production. The Healdton Oil Company reports that the output of the field has increased from 1,000 barrels per day in August to 1,500 barrels per day in September. This increase is attributed to the discovery of new oil-bearing strata and the installation of additional pumps.

Howe Prairie Basin

The Howe Prairie Basin in Oklahoma is showing signs of renewed activity. Several new wells have been drilled, and the output of the field is expected to increase significantly in the coming months. The basin is known for its rich oil reserves and has attracted the attention of many investors.

At Broken Arrow

At Broken Arrow, Okla., the oil field is showing a steady increase in production. The Broken Arrow Oil Company reports that the output of the field has increased from 1,000 barrels per day in August to 1,500 barrels per day in September. This increase is attributed to the discovery of new oil-bearing strata and the installation of additional pumps.
