Jupiter Warmer Than the Earth.

"The gigantic mass of Jupiter has a much larger warmth than that of the earth," says a scientific writer. "It is the result of the molecular movement produced by the compression of the strata and must be greater the more powerful the masses and hence the larger the pressure of the strata is. Jupiter surpasses the earth in point of mass 307 times, and for this reason the inner temperature or individual warmth of the planet is probably high enough to evaporate the water upon the surface quickly, so that water vapor forms the principal substance of the atmosphere of Jupiter. Water vapor is an excellent reflector and readily accounts for the bright radiation of light emitted by the planet."

Bible Reading.

Joseph S. Auerbach, author of "The Bible and Modern Life," asserts that "a generation has grown up without the benefit of Bible reading.

"Take away the words of Bible memory and the phrases born of Bible reading and Bible inspiration from Lincoln's Gettysburg address," says Mr. Auerbach, after pointing out the value of this training—"fourscore," "brought forth," "hallow," "perish from the earth," etc.—"and much of the solemn music has died out forever from this inspiring battle hymn of consecration to the republic."
