THE GOVERNMENT'S CARE OF OUR CONSUMPTIVE PATIENTS

The improvement and cure of consumptives at Fort Stanton have been effected by the treatment of the body of the patient—not by the treatment of the disease. The medical profession does not admit that there has been discovered a specific remedy that will cure consumption. In the absence of such a remedy, the doctors at Fort Stanton call upon nature to aid the work of medicine. The whole gist of the treatment is: build up the general tone of the body to a point where the system, of its own accord, will throw off the disease.

To accomplish this, three things have been found to be of paramount importance. They are: rest outdoor life, wholesome food.

Consumption is the most devastating to the system of all the diseases to which the human body is heir. It not only eats up the lungs, but it reduces the vitality of its victim to the lowest ebb. The most meager student of medical science ought to realize that a body in which the vitality is badly impaired should not be taxed further, but should be given absolute rest, in order that the remaining strength be permitted to fight the disease.

The question of food for a consumptive is even more simple than the question of rest. He should receive plain, well-cooked, nutritious, tissue-building food—the same food that is given a prize-fighter training for a fight (for the consumptive is training for a hard fight), or an athletic team preparing for a contest. At Fort Stanton, it has been found that eggs and milk are exceedingly beneficial, and patients are given both in abundance. A herd of dairy cattle is kept on the reservation, and increased from time to time as the number of patients increases. A herd of range beef cattle has been built up and, in another year or two, will supply the sanatorium with beef. At present, meats are bought on annual contract. A large tract of land is devoted to the raising of garden vegetables, al-

though the entire needs of the institution cannot as yet be met in that respect.

"Outdoor life" probably means more at Fort Stanton than at any other sanatorium in the country, because there the patients are out-of-doors, in the actual open air, practically all the time. About half the patients sleep in tents, thereby getting as much and as pure air at night as they would if they were actually out of doors, sleeping on the ground, with the naked stars above them. The remainder have beds in specially ventilated dormitories, which they are not permitted to occupy except when they are asleep. All patients are under the direct control of nurses who are required to keep their charges out of doors in the daytime, and the dormitory doors and windows wide open at night.

One of the greatest advantages in the treatment of consumption at Fort Stanton is the climate. The sun shines on an average of 340 days per annum, and on nearly every one of these days it is mild enough for the patients to sit out of doors. The winters are mild and the summers cool. The latitude is 6150 feet, which, combined with the slight precipitation—from 14 to 17 inches, part of which is snow—produces an extremely dry atmosphere the year round. While the temperature on one or two occasions has gone over 90 in the summer, the heat is never enervating. There is invariably a cool breeze. It is always comfortable in the shade, and at least one blanket is necessary at night. All patients sleep well, and as sleep is a great tissue-builder the cool nights in summer are almost as beneficial as the clear days throughout the year. In the winter the temperature at night is almost invariably at freezing or a little below, but the days are almost universally mild.—From "Government Care of Consumptives," by Oliver P. Newman, in the American monthly Review of Reviews for July.

THE OLDEST LIVING THING.

Said to Be a Huge Cypress Tree 6,260 Years Old.

St. Louis Globe-Democrat: "The statement recently made that there are yews in England which are the oldest living things on this earth," Mr. Thomas C. Ireland said, "is not correct.

"These yews are old, very old; there is no doubt about that; some of them were stalwart trees even before Caesar landed on these shores. There is one now standing in the churchyard at Fortingal, in Perthshire, which Decandole, nearly a century ago, proved to the satisfaction of botanists to be over 25 centuries old, and another at Hedsor, in Bucias, which is 3,240 years old. How Decandole arrived at an apparently correct estimate of the enormous age of these living trees is a simple thing, and the principle is doubtless well known today to all. The yew, like most other trees, adds one line, about the tenth of an inch, to its circumference each year. He proved this after an investigation extending over several years, and we know now, a hundred years later, that his deductions were correct. The old yew at Hedsor has a trunk 27 feet in diameter, proving its great age, and it is in a flourishing condition now, like its brother at Fortingal.

"Their years are few, though, compared with those of the trees I had in mind when I made my first assertion that the statement printed about them in a scientific journal was incorrect. In one chapter of his writings Humboldt refers to a gigantic baobab tree in central Africa as the 'oldest organic monument' in the world. This tree has a trunk 29 feet in diameter, and Adanson, by a series of careful measurements demonstrated conclusively that it had lived for not less than 5,150 years.

"Still it is not the oldest organic monument in the world, as Humboldt declared, for now Mexican scientists have proved that a huge cypress tree, standing in Chepultepec, with a trunk 118 feet and 10 inches in circumference, is older than it—older, too, by more than a thousand years—for it has been shown, as conclusively as these things can be shown, that its age is about 6,260. To become impressed with wonder over this, one has only to dwell on that duration for a little while in thought.

"Yet it is not so remarkable when one stops for a moment to remember that, given favorable conditions for its growth and sustenance, the average tree will never die of old age—its death is merely an accident. Other younger and more vigorous trees may spring up near it, and perhaps rob its roots of their nourishment; insects may kill it, floods or winds may sweep it away, or its roots may come in contact with rock and become so gnarled and twisted, because they have not room to expand in their growth, that they literally

throttle the avenues of its sustenance; but these are accidents. If such things do not happen a tree may live on for century after century, still robust, still flourishing, sheltering with its widespread branches the men and women of age after age.

A Story of Andrew Carnegie.

The man who has given away over \$62,000,000 in public benefactions, Andrew Carnegie, is evidently endowed with a humorous as well as philanthropic bent. Here is a good little story that he recently told on himself:

"I happened to spend a Sunday in a small town in Georgia," he says, "and as I had never attended a colored church I decided to attend the morning service at a colored church in that town. I sat in the last pew and when the plate was passed I placed a \$50 note on it. The old darkey who passed the plate looked at the note carefully and then marched down to the pulpit and called the minister to one side. He whispered to him excitedly, pointing now at the note and then at me. The minister took the plate and addressed the congregation as follows: "'Bre'ren, de Lawd hab been mighty good to us dis day. We hab one dollah and twenty-fo' cents in de c'lection an' if dat fifty dollah bill wha' dat old man wid de gray beard and ha'r put in de plate am a good bill we will hab fifty-one dollah an' twenty-fo' cents. Bre'ren, let us 'ank de Lawd an' ask him dat it may be a good bill.' I left the church before the prayer was finished."

Suicide Prevented.

The startling announcement that a preventive of suicide had been discovered will interest many. A run-down system, or despondency invariably precedes suicide and something has been found that will prevent that condition which makes suicide likely. At the first thought of self-destruction take Electric Bitters. It being a great tonic and nerve will strengthen the nerves and build up the system. It's also a great Stomach, Liver and Kidney regulator. Only 50c. Satisfaction guaranteed by Chas. Rogers, druggist.

WASHING WITHOUT WATER

Is Like Trying to Get Rid of Dandruff Without Herpicide. Did you ever see any one trying to wash themselves without soap or water? If you did what would you say of him? It is every bit as foolish to try to get rid of Dandruff and to prevent Baldness by feeding the germs which cause it, with Cantharides, Vaseline, Glycerine and similar substances which form the principal ingredients of most so-called Hair Vigors. Newbro's Herpicide is successful because it attacks and kills the parasitic germ which feeds on the hair roots. It is the original and only genuine scalp germicide manufactured. Sold by leading druggists. Send 10c. in stamps for sample to The Herpicide Co., Detroit, Mich.

MISCELLANEOUS BUSINESS OPPORTUNITIES

FOR SALE—At Gaston's Feed and Sale Stable, one Colfax Roller Feed Mill; one 20-horsepower Motor and Starter Box; 80-foot 4-ply Rubber Belt; one pair Butchers' Wall Scales; also 800 good Sacks.
