

# COURTS TO TEST ARIADIAN SPORT

## HUMANE SOCIETY OFFICERS SEE COURSING

### ACCIDENT ON MT. WILSON

Young Man Seriously Injured by a Fall. Y. M. C. A. Annual Reception Tomorrow—Other News

Pasadena Agency, 114 East Colorado Street.

PASADENA, Sept. 17.—Humane Officer Erwin and Constables Austin and Nell of this city were among the spectators at Arcadia this afternoon when the sport of coursing was resumed. They had no warrants for the arrest of those in charge of the sport, and only made note of the affair as it proceeded and of the persons who were there. The method followed was about the same as heretofore. A lone rabbit would be released on the field before the grand stand and a couple of dogs would be let loose immediately after. There would be a rush, a brief chase with the advantage overwhelming with the dogs, then a mix-up and a dead rabbit.

It would be repeated with little variety, the men in the grandstand cheering the victorious dogs. Probably two hundred persons were at the grounds, both Pasadena and Los Angeles being represented. No particular enthusiasm was shown over the revival of the sport, the main feeling seeming to be one of curiosity. Humane Officer Sherwin said tonight that the air will be up for discussion at a special meeting of the society tomorrow that it will be then decided whether to make any arrests or not.

**Accident on Mt. Wilson**  
Miss Bessie Wilson, who resides at 4 Cypress avenue, this city, was severely injured this morning at Wilson's Peak park by the breaking of a rope in a swing. The young lady was swinging when the rope parted and she was thrown violently to the ground. Her back was injured so that she was unable to walk. Arrangements were made at once to receive her to her home as it was feared that she was dangerously hurt. The journey down the new trail was slow and painful but was finally accomplished. The ambulance of Ives & Vren was in waiting at the foot of the trail and Dr. George E. Abbott took charge as soon as the party reached the young woman's home.

**Y. M. C. A. Annual Reception**  
Tomorrow evening occurs the annual opening exercises of the local Young Men's Christian association. Light refreshments will be served and a varied program of musical numbers and gymnastic performances will add spice to the entertainment offered. Prof. Harry Maloney will assist Director Braden in an exhibition on the parallel bars and in the latter part of the evening a match game of basket ball will be played between the Y. M. C. A. and high school teams. With this gathering of the members and friends of the association the regular work of the winter will begin. It is reported that the several gymnasium classes will have a large enrollment. Secretary Sims and Director Braden will be in their respective places with many new pupils for the year's activities. The association was organized in this city in 1886 with a membership of fifty. Today it has over 500 members and owns property valued at over \$60,000.

**Pasadena Brevities**  
For some time there has been an organization in this city known as the Union Sisters, made up of the wives, sisters and daughters of members of union labor societies. If a charter can be secured the scope of the organization will be widened and a union labor league formed. Applications for charter memberships are being received.

Pasadena lodge No. 13, Knights of Pythias, will celebrate its twentieth birthday on Tuesday evening, September 19, with a banquet. The affair promises to be extremely interesting. Following the supper at 8:15 under the charge of the J. M. M. society of the First Christian church there will be special music and a number of speeches.

There will be a conference tomorrow between the mayor, city attorney, city council and supervisors relative to the several plans for caring for the storm waters. A recent meeting of committees from the county board and the city council outlined work to be done along this line, including in a storm water district a portion of the country to the north and east of the city. Whether this proposal can be made effective is to be determined by the conference tomorrow.

Assessor Hinckley has completed his footings for the valuation of South Pasadena property and places the figures at \$2,401,053. To this sum the state board of equalization is expected to add some \$50,000 as its valuation of railroad property within the city limits, the Southern Pacific, Salt Lake and Santa Fe being here included. With the same tax rate as last year this will yield \$20,837 for the year's expenditures.

**Don't Leave Comfort,**  
convenience and order at home when you travel; take them along with you in your Special Suit Case. Sole leather, brass trimmings, linen lined, shirt-fold. It's a revelation to every one interested in a suit case, and only \$5.50. Sanborn, Vail & Co., 367 Broadway.

## PROPOSE EXTENSION TO VENICE BREAKWATER

Plans Being Considered to Add Two Hundred Feet to Each End of Structure

Special to The Herald.  
OCEAN PARK, Sept. 17.—An additional two hundred feet to each end of the Venice breakwater now in course of construction is being considered. The contract as it stands calls for approximately 6000 carloads of rock and the work of construction to be concluded in January. To date a little more than one-sixth of the material has been put in place but a foundation has been laid and it is expected that the future work will proceed rapidly.

Mr. and Mrs. J. Wythe Evans and Mr. and Mrs. R. A. Phillips left last evening on a trip to Europe. Mr. Wilmot Griffiss, also a resident of Ocean Park, will join the travelers in New York. The party expects to be gone ninety days and on the return trip will visit many of the large cities in the middle west.

Jack Van Avery and T. B. Eville have left for a two weeks' fishing and hunting in Ventura county. Mr. and Mrs. Frank Lawton are arranging for a visit to the Lewis and Clark exposition at Portland. While there Mr. Lawton will endeavor to arrange for securing some of the gondolas and other craft to be disposed of shortly.

Mr. and Mrs. L. H. Taylor of Hazen, Nev., who with their daughter have spent the summer here, will leave for their home tomorrow.

## GAZES AT \$1,500,000; BECOMES MONEY MAD

Sight of Wealth in Tax Office Sends Man to the Hospital

Special to The Herald.  
PHILADELPHIA, Sept. 17.—When the big iron door of the tax office in city hall was swung open for business the other day a shabby little man, with the most intense expression imaginable, who had been waiting in the corridor, slipped in and took up his station at one of the windows.

"What are you doing here?" asked one of the clerks.

"I want to see the money again," answered the little man. "I was here yesterday and saw \$1,500,000 with my own eyes. Oh, but it was fine!"

The preceding day had been an unusual heavy day, owing to the fact that it was the last day for the payment of taxes before the penalties went into effect. Every one was so busy then that the little man, who said that his name was Richard Nigerman, was not noticed. The crowd was thinner the next day and he became a nuisance.

Ordered away, he would merely go to another window, gazing in rapture at the bank notes.

The clerks were finally compelled to have him locked up. Magistrate Kochersperger committed him to the Philadelphia hospital to await an examination into his mental condition.

## GIRL QUITS SCHOOL TO CULTIVATE CORN

Only 14 Years Old, She Makes \$50 an Acre From Her Work

Special to The Herald.  
WALKERTON, Ind., Sept. 17.—Lona Dare, only 14 years old, has made \$50 an acre from her little farm, where she went immediately after graduating from the school here.

Last year Lona Dare and a man had adjoining five-acre patches of corn, and while the weeds got ahead of the man the girl husked forty bushels of corn to the acre as a result of her work.

After graduating this year she changed her white tulle dress for a gingham cultivating uniform and went to work on a more extended plan. She made her own contract with a pickle contractor and planted two acres of cucumbers, half an acre of potatoes and five acres of corn, which she is now working for the third time.

The girl has good ideas about farming. Seeing a neighbor using a large cultivator she borrowed a big shovel plow from her grandfather and worked her ground so deep that all the weeds were killed.

Miss Dare is fond of horses, and is not afraid to drive any horse that can be bridled. Her parents say she takes naturally to farm work.

## NEGRO IS GRADUALLY BECOMING WHITE MAN

Change in Skin Appears After an Attack of Smallpox

Special to The Herald.  
PATERSON, N. J., Sept. 17.—William Jackson, colored, 18 years old, bids fair to be a white man in a few more years, if the white spots on his body, which were small as pinheads several years ago, continue to grow as they have done in the past six months. Jackson is in the county jail here, charged with larceny. He is one of the Passaic small-pox persons who were put out of the county jail six weeks ago and were afterward returned after the Passaic authorities had cured them.

# MISSING MAN SENDS NO WORD

## SAN BERNARDINO MYSTERY DEEPENS

### POLICE SEARCH FOR CLEW

Fiancee of Fred Sutton Vainly Waits for News—Southern Pacific Has Big Freight Wreck

Special to The Herald.

SAN BERNARDINO, Sept. 17.—The mystery surrounding the disappearance of Fred Sutton from Highland three weeks ago continues to grow. In all that time not a word has been heard from him by the young woman he expected to marry in a few weeks. His friends begin to fear that there has been foul play as was intimated when he first disappeared. It is stated that a former admirer of the young woman is said to have made boasts that he would kill any man who might attempt to marry her. Every possible clew to the whereabouts of the young man is being hunted down.

A freight wreck occurred on the Southern Pacific last evening in the vicinity of Beaumont. Nearly a dozen freight cars were piled in a heap and smashed to kindling wood. The line was tied up for several hours. None of the crew was injured. The wreck was caused by the breaking of an axle.

Prof. Lewis M. Terman, the new principal of the high school, and Prof. Cyrus A. Rector, the new science teacher on the faculty, will arrive in this city this week from Indiana. The public schools of the city will open a week from tomorrow with a greatly increased attendance over last year.

The San Bernardino police last night received a telephone message from a man who represented his name to be Miller and who claimed to be talking from the Santa Fe baggage room in Los Angeles, asking that a "little woman dressed in black, wearing glasses and accompanied by a child" be taken off the overland train when it arrived in this city, because she was "traveling on a scalper's ticket."

The officers got suspicious and put the matter up to the Los Angeles police department, but they had not heard of the case. Meantime the stranger had again called up and admitted to the San Bernardino police that the woman was his wife and he merely wanted her detained because there had been a family jar and she was leaving home. The woman was not molested here.

## FRIGHTENS BURGLAR AWAY FROM TILL

Riverside Grocer Awakened by Prowler and Prevents Looting of Store

Special to The Herald.

RIVERSIDE, Sept. 17.—A burglar effected an entrance to the Beall grocery store on the east side early this morning, but was frightened away before securing any booty. The Bealls sleep in rooms over the store and were awakened by a noise below. Beall quietly descended and found a masked burglar at the money drawer. As soon as he caught sight of the owner of the place he made a quick exit. The police were notified, but failed to get any trace of the burglar.

J. L. Kidd, druggist at Casa Blanca, was arrested and tried late yesterday on the charge of violating the city prohibition ordinance. He was accused by Officer Rayburn of Arlington of selling bottled beer. He will receive his sentence on Monday.

Mrs. Edna Tinker Gruwell, formerly of Riverside but now of Los Angeles, sang "Save Me, O God" at Calvary Presbyterian church this morning. Mrs. Gruwell will soon go to New York to continue her musical studies, and before returning to California will study for a time in Paris.

Funeral services of the late William H. Evans, who was killed by a premature blast in the Casa Blanca quarries, was held this afternoon from the United Brethren church, Rev. M. Goodrich officiating.

## SOLDIERS AT SAN DIEGO LEAVE PRACTICE CAMP

Acquire Remarkable Speed in Getting the Guns into Action

Special to The Herald.

SAN DIEGO, Sept. 17.—The boys at the fort who have been in camp during the week under the guns broke camp yesterday and returned to the barracks. It was a practice camp and so proficient did the soldiers become that they responded to an alarm yesterday, named the guns and fired a shot in just twenty-five seconds from the time the alarm was given.

Three-quarters of a mile of bunting has been ordered with which to decorate the court house in honor of the visit of the grand encampment of the Odd Fellows here in October. Practically all the business houses of the city have signified an intention to decorate on that occasion.

Invitations have been issued for a farewell banquet to be tendered by the chamber of commerce to retiring Secretary H. P. Wood, who sails on September 30 on the Alameda for Honolulu, where he will take up the work as secretary of the Hawaiian promotion committee. The banquet will be held on the evening of the 23d. Dr. Edward Grove, one of the directors of

the chamber, has charge of the preparations.

Wilbur Kyle, Joe Delino, Earl Nelson and Eddie Jackson returned yesterday from a trip among the Los Angeles beaches and resorts in the yacht Nackey, which was one of the Lipton cup defenders this year.

Counterfeit \$10 bills have made their appearance in San Diego and it seems that a gang of workers is shoving the crooked stuff in this city.

# DISCOVERS CURE FOR LOCKJAW

## COUNTY HOSPITAL DOCTOR HAS REMEDY

### EXPERIMENTS WITH EUCANE

Efforts to Save Life of Patient Prove That Remarkable Results May Be Obtained When Taken in Time

Through the death of Ben Chadsey, the 9-year-old boy who was sent to the county hospital a week ago suffering from lockjaw, the physicians of that institution believe the way to cure tetanus has been discovered.

For the second time in the history of medicine beta eucane was used in the treatment of this disease. It was injected into the spinal canal of the boy in the hope of saving his life. The eucane solution was administered twice in this manner, each time with marked improvement in the condition of the patient, but owing to delay of application to physicians the boy died Saturday morning.

**Eucane for Lockjaw**

Dr. J. Harvey Hall, who has made particular investigations in the use of eucane as a remedy for tetanus, says that there is no doubt that the use of this drug will in a short time relieve all the terrors of lockjaw and eliminate the long list of fatalities which now follow each celebration of Independence day.

"Hippocrates, the father of medicine, in speaking of tetanus 2500 years ago, said that a person attacked with lockjaw would recover if it were possible to keep him alive for four days," said Dr. Hall in discussing the case at the county hospital.

"A few months ago Dr. Osler said that he agreed perfectly in what Hippocrates said, and if any means could be discovered by which the patient could be kept alive four days after the symptoms of lockjaw developed he would recover.

"For twenty-five centuries physicians have been trying to find the necessary factor which would keep the lockjaw patient alive for the stipulated time. I believe that it has at last been found, in beta eucane, which in my estimation will be practically certain if properly administered."

**Used Once Before**  
The first time eucane was ever administered in the treatment of tetanus was a few months ago when Dr. Murphy of Rush Medical college, Chicago, used it successfully in a case in Chicago after the Fourth of July celebrations.

While the method of administering the drug in the case of Chadsey was that mapped out by the Chicago physician, Dr. Hall believes that the method should be changed somewhat and more of the drug administered.

**Method of Treatment**  
In treating the case with eucane, a quantity of the fluid from the spinal canal is withdrawn by the use of a hypodermic and half that quantity of eucane injected in its place. This produces spinal anesthesia, which continues for about four hours.

According to Dr. Murphy's method it is necessary to do this but two or three times, but, according to the theory advanced by Dr. Hall, these should be a fresh injection of the drug every four hours so that the patient will be under the influence continuously of the eucane.

Death in the case of tetanus is caused by exhaustion of the muscles. If the spinal cord can be kept under an anæsthesia a sufficient length of time the muscles will remain relaxed, and if the relaxation can be kept up for four days the patient is practically out of danger.

While the use of this drug in such cases is entirely new and its true worth not yet fully demonstrated, indications favor its success, say physicians, and it may be that after 2500 years' research Dr. J. Harvey Hall has at last found the essential factor and its method of administration which will place one more supposed fatal disease in the list of only inconvenient maladies.

## UNHAPPINESS DISPELLED

Men and Women Unanimously About Mea and Women Unanimously About Mea

Many women weep and wail and refuse to be comforted because their once magnificent tresses have become thin and faded. Many men incline to profanity because the flies bite through the thin thatch on their craniums. It will be good news to the miserable of both sexes to learn that Newbro's Herpicide has been placed upon the market. This is a new scalp germicide and anti-septic that acts by destroying the germ or microbe that is the underlying cause of all hair destruction. Herpicide is a new preparation, made after a new formula on an entirely new principle. Any one who has tried it will testify as to its worth. Try it yourself and be convinced. Sold by leading druggists. Send 10c in stamps for sample to The Herpicide Co., Detroit, Mich.

# LOS ANGELES CAPITAL LANDS PRIZES IN MINES

## Local People Find Properties That Are Full of Promise

### SMELTER PLANNED FOR ARIZONA METAL DISTRICT

New Projects Planned and Deep Mining in Northern California—Rich Strikes Still Continue

Mining Engineer W. R. Dickinson has been examining mines near Searchlight, Nev., for Los Angeles parties that are located on the Ascott ledge. The ledge is reported strong and well mineralized, and the croppings so encouraging that the powers in control will start operations on a large scale before the close of this month. The properties controlled are the Ascott, the Lorta R. and Marie R. claims, lying to the west of the Boulder company's claims. There is a good looking and very wide north and south vein on the Ascott, opened by a 10-foot location shaft, the ore carrying low values. The appearance of solid formation and ore carrying any value in the development of the Ascott will be watched with keen interest, since proof that the known east and west leads break through to the Ascott and San Bruno lode would immediately cause great activity on several square miles of ground. A shaft at least 100 feet deep is to be sunk on the Ascott ledge. The work will be purely for exploration purposes, to determine the width and dip of the lode. It is the presumption of the company to sink in the hanging wall when determined, to a considerable depth, and to drift to the intersection of an east and west vein with the lode.

W. H. Bainbridge, superintendent of the Ascott company, W. J. Rouse, secretary, John B. Dolinger and O. H. Kelsker, stockholder, have recently united the mines.

The officers and directors are: L. J. Spruance, president; William Selbie, vice president; W. J. Rouse, secretary; W. H. Bainbridge, director and superintendent; E. G. Hookstraten, director. The offices of the company are in the Hellman building.

**Big Smelter Planned**  
Wickenburg, Ariz., is to have a smelter within a short time if the plans of the Acme Smelting and Refining company, a Los Angeles corporation with offices in the Hellman building, are carried out by the promoters anticipated. Wickenburg is in the Black Hills district in the central part of the territory, and directly on the line of the Arizona and California railway now under construction. Surrounding it are a number of mines which are very well spoken of, such as the Old Vulture, the O'Brien, the White and Oro Grande, some of which have established reputations.

The company is organized and backed chiefly by Arizona capital. The officers and directors are as follows: T. P. Powers, ex-speaker of the territorial house of representatives, president; N. C. Wilson, secretary and treasurer; Dr. C. E. Plath, C. C. Cole and Webster Street, directors. J. C. Scannel is Los Angeles representative.

The district produces gold, copper, silver and lead. The ore is a smelting variety of flux. At present the ores of the district are shipped to the El Paso smelter, and pay freight charges of \$10 a ton. This destroys the profit on any but the higher grades. The new establishment will be a strictly custom plant, the company operating no mines. The completion of the new railroad will bring the territory as far as the Colorado river in touch with Wickenburg, without any smelting competition.

**Looking at Mines**  
Edward Bleuett of Los Angeles, accompanied by two mining engineers, who are in Florence, Arizona, are in the Mineral Hill district to examine the properties of the Fletcher Mining company. Mr. Bleuett represents a company of capitalists who have acquired the interests of the Fletcher company in Mohave and Pinal counties. It is understood that the price to be paid for the Fletcher company's interests in Pinal county is \$30,000, to be paid in monthly installments of \$5000.

It is said that the president of the States Bond and Trust company of Los Angeles has signed the contract for the Fletcher company, guaranteeing an absolutely perfect title to the property.

The Florence Tribune says it is to be regretted that it may be impossible for the firm to fulfill its contract as there is an action filed in the district court by the original owners of the Fletcher company's mines, praying for the possession of the property. The contestants claiming that the company had failed to make final payments. It is to be hoped that this controversy may be amicably adjusted and the properties cleared of all litigation as these holdings are among the most valuable mining interests in Pinal county. Mr. Bleuett and the gentlemen with him made a thorough investigation of the properties and were well pleased with their showing. It is understood that a force of miners will be put to work at once.

**Dan Burns Active**  
Col. Daniel M. Burns, general manager of the Candelaria mines in the San Dimas district of Durango, is having plans prepared for a hydro-electric plant in that district. Mountain water will be utilized and electric power will

be supplied to the Candelaria and other mines and to reduction plants in the San Dimas district. The establishment of the new power plant will mean much to the camp, as the operating expenses of the mines will be considerably reduced. It is reported from San Dimas that negotiations are in progress for the sale of the Animal mine in the Durango district to an American company for \$200,000 gold.

## Gold Near Home

The Pomona Progress says that M. M. Eshelman of Tropic has thought for many years he had a gravel pit, but it proves now to be a gold mine with a vein of the pure, precious metal running through it. The gold is worth \$90 to the ton. It is said that a company is being formed to develop the mine which is not an ordinary gravel pit, but is a cut into the side of the hill which extends to the high range of mountains to the north.

Some of the large rocks directly over the spot where the vein is said to be located are so rotten that they can be picked to pieces with the fingers.

There is considerable excitement in Glendale and Tropic over the find, and those who have bought gravel from the Eshelman were eagerly searching for indications of the first croppings. One man who has recently bought several loads was bemoaning the fact that the precious gravel was below the cement sidewalks surrounding his property.

## Black Hawk Discovery

The Black Hawk Mining company of Eldorado has made what promises to be an important strike on the Rand claim by continuing a crosscut tunnel. The new find lies across a narrow canyon from the main lead. The ledge has been known for years to carry values. The crosscut tunnel is opening what it is thought may prove as important a find as the old Rand lead fifty feet south. E. P. Jeanes, superintendent of the Black Hawk company, says that work will be started on the Rand, Honest Miner and Wedge claims, in preparation for extraction and treatment of ore.

C. E. L. Gresh, manager of the company, is in Los Angeles arranging for the shipment of machinery and supplies sufficient to work the properties on a considerable scale. Mr. Jeanes reports that several Eldorado deals are about to go through in Los Angeles which will cause much activity in the Canyon as soon as cool weather sets in.

## Good Mining News

The Ivanpah mining district, San Bernardino county, seems to be still keeping up its old time reputation as a gold producer. A. D. McEvoy has bonded a group of twenty mining claims to Harry P. Rising of San Diego for the sum of \$42,500. The claims are all gold producers, and have been prospected to some extent, and have shown excellent values. Rising, who is a mining man, will begin immediate work developing his new property, and expects soon to erect a mill for handling the ore. The bond runs for a period of eight years, and while \$3000 of the total will be paid within a month the remainder will be divided into various payments running through the period of the bond.

The Vivian Mining company has been incorporated with J. A. Graves of Los Angeles as president. Thomas Ewing will be general manager of the property and E. W. Ewing superintendent. The mine was formerly owned by Judge Erskine M. Ross of Los Angeles and W. E. Ewing. A great deal of work has been done on the property the past three years and it is said that splendid ore banks have been opened up. The new company starts out with a large treasury and intends to erect a mill of capacity sufficient to handle the entire output of the mines and at the same time the main shaft will be sunk to a depth far below the present level.

Good ore is found at the 150 level of the old Fay mine, south of Kingman. The mine is working a small force of men and sinking is progressing rapidly. From the surface the ore has been regular and the values have increased considerably. It is said a mill will be erected as soon as levels have been run and ore blocked out.

The hoisting plant at the Enterprise mines is in working order and sinking has been commenced. The America, on which the plant has been placed, is one of the biggest copper veins in that section. Major Mensch, general manager of the property, believes he will have one of the greatest copper producers in the territory when the mine is properly opened.

H. J. Heffron has visited the mines of the Chloride section, Arizona, in the interest of O. P. Posey of Los Angeles. Heffron states that he believes the Chloride section has a great future before it; that all it needs is intelligent and systematic working of the mines.

## Providence District Active

The Providence Gold and Copper company, whose property is in the Providence mountains in San Bernardino county, is just levying a second assessment of a quarter of a cent a share. The first assessment was levied some months ago as the result of a decision of the stockholders.

The company is sinking a shaft that is down 123 feet. It is the intention to go 200 feet before drifting. The work is in ore that has doubled in average value within the last twenty-eight feet, it having assayed only \$9 to \$10 at 107 feet, and now gives average returns of \$18 to \$20. As no drifts have been run, the extent of the ore body is not known. The ore is similar in character to that in the New York mountains. The company has another shaft which is not being worked at present, but which showed up very well, indeed. Two shifts are being worked, reports the Index. The ore is a telluride and Secretary Parks has

some fine looking specimens at his office in the Laughlin building.

The Providence mountains are near the New York district, which has been attracting considerable attention of late. Prospectors are beginning to enter the range and it is almost certain that the Providence district will be thoroughly explored this fall and winter. The ore already reported to be uncovered is as good or even much better than some of the Nevada finds that have started a wild rush of prospectors from every direction.

A Huntington mill has been ordered for the Sideshow mine near Victorville, San Bernardino county. The plant is to be shipped from Los Angeles.

## Much Free Gold

A message from Olinghouse, out of Reno, Nev., indicates an extraordinary discovery of gold in that old district, just now beginning to experience a new life. The discovery is reported in the Ora group, which is being prospected under a \$25,000 option, running in favor of De Witt Bovee and associates of Pittsburgh, Pa. It was while driving a tunnel to intercept the ledge by which another group is assured that the rock was uncovered. It was at a distance of 150 feet from the mouth of the tunnel and seventy-five feet below the surface. At this point, according to a message in the Reno Gazette, the nuggets of gold began to appear. They found that the heavy stringers of the precious metal ran entirely across the tunnel, a distance of ten feet. Several of them are as large as the palm of the hand and almost pure gold. As soon as the strike became known it caused a stampede to the vicinity of the mine. Claims are being staked out by hundreds of men, who are leaving other parts of the district to investigate. Old prospectors who looked at the property say the strike is one of the most important ever made in the state.

The Reno Journal says the rich streak affords samples assaying from \$50,000 to \$175,000 per ton. A miner from the camp says the panings showed values from \$40,000 to \$50,000 per ton.

## Rich Ore Returns

For a single car of ore from the Utah mine of Fish Springs, the treasurer has received a check for \$2904.21, the records showing an average value per ton of \$117.93. From the assays made prior to settlement a valuation of 161.6 ounces silver and 36.2 per cent gold is disclosed. The development work which is now being carried on in the mine's deeper levels is yielding results that certify to the permanency of the deposits carrying this high-grade ore, and from all present indications there seems to be little doubt that the Utah will have any difficulty in continuing its earnings of velvet for the shareholders.

The Reilly lease on the Florence is proving the mining sensation of the year, says the Goldfield Sun. In one day ore to the value of \$25,000 was taken out, and it is now estimated that the production from the lease will aggregate \$700,000 by the time it expires on November 1. The ore as taken out is averaging \$300 per ton, and every man who can work to advantage is being employed in its extraction. The force at the mine numbers 125, and during the remainder of the lease the greatest activity will prevail. The rich ore is being extracted from the 100 and 150-foot levels, and the entire production as extracted is being sacked for shipment. Mr. Reilly and those associated with him will be made wealthy men as the result of their remarkable success with their lease on Florence ground.

## Rich Deep Mines

The rich ore body in the Midas mine at Harrison gulch has been encountered in the 900-foot level, the lowest workings of the famous western Shasta county mine. With this large body of exceptionally rich ore encountered in the 900-foot level and the Midas owners elated over the discovery, the Midas ledge has now reached a depth of 900 feet below the collar of the shaft, or a total of 1450 feet below the apex. Both the small and uniform size of the vein, as well as its great length of pay shoot have been the special characteristics. The longest horizontal development on the shoot was in the fifth shaft level where it was stopped continuously for 1300 feet. The ledge runs from twelve to thirteen inches and from \$20 to \$30 per ton. In spite of its small size it has kept the 20-stamp mill running for four years and has produced a total output of \$2,000,000.

## PERSONAL NOTES FROM SANTA ANA DISTRICT

Special to The Herald.  
SANTA ANA, Sept. 17.—G. H. Carlyle, aged 78, died last night at his home in Westminster, where he has lived for more than twenty years. He leaves a widow and three grown children, all residents of Orange county.

A marriage license was issued yesterday to Emilio Lobo, aged 20, and Gonzalez Herminez, aged 27, both residents of Capistrano.

Mrs. H. E. Smith and daughter left yesterday for Tingley, Ia., to visit with relatives.

Miss Mabel Wade of Los Angeles is a guest at the home of Mr. and Mrs. K. Cleaver on East Seventeenth street.

Mr. and Mrs. W. S. Rose have returned from a vacation spent in Venice. Mr. and Mrs. C. A. Kingston are spending a week at Newport Beach.

Ireland has a prodigy. Three and a half years old, a Kinnegad boy reads the newspapers, sings about fifty comic songs, and dances a sailor's hornpipe in a regulation Jack Tar suit.

## This is registration week at University College

(36th St. & Wesley Ave.)  
Offers great variety of courses—strong faculty, new buildings, equipped with modern apparatus.

## Preparatory School
