

SAIS UNBORN ARE REPORTED

ANGELENO GLAD TO RETURN TO CALIFORNIA

Cal F. Hunter Pays High Tribute to Los Angeles—Hears Many Flattering Words While He Is in the East

"I would rather live under a tin pan in Los Angeles than in a mansion anywhere in the east," said Cal F. Hunter yesterday.

Mr. Hunter, who devotes his time to managing his own property and also that of John Hunter, has just returned after a business and pleasure trip of two months in the east.

It was his first visit east in several years, and he was most emphatic in his remarks indicating a preference for Los Angeles as a home.

"The country back east does not look as it did when I lived there a score of years ago," said Mr. Hunter, "and even the people seem to have changed. They impress me as being listless if not lazy, and they have permitted their property to run down in a frightful manner."

"Fine orchards that used to delight my heart during my boyhood days in Indiana have been permitted to die out, the woods which were thick with the festive squirrel and the cottontail have been cut down, all kinds of fences, except the political variety, are in the look-and-out class and the buildings look dilapidated."

Everything Dilapidated "Altogether the physical conditions as I found them after a lapse of several years were disappointing, although I must admit that everyone appears prosperous and there is no sign of stagnation in any line of business or industry."

"I visited all the middle western states and went as far east as Pittsburg, and everywhere I heard people talking about Los Angeles and the remarkable growth this city is enjoying."

"My observations lead me to believe that the immigration to Southern California and Los Angeles during the coming winter will far exceed that of last winter, which was the record season in point of newcomers for this section of the country."

"I return more optimistic than ever as regards the future of Los Angeles and the entire southern section of California."

NOISY UNEMPLOYED AT CHURCH

Australian Preacher Is Interrupted by Cries of "Rot" in Sermon on Future Life

MELBOURNE, Aug. 19.—For many Sundays some hundred or so of the loafing unemployed—who refuse to work even if offered it—have been making a round of the principal Melbourne churches. Led by Tom Mann, the English labor leader, and J. W. Fleming, a notorious agitator, the Sunday visit was made to the Scots church on Collins street, and the following account is but a type of the behavior of this discreditable body at each of the leading churches they have successively attended.

Some 170 unemployed marched to the church. They were told that seats had been reserved in the back, but "Come up to the front," said Mr. Mann, and up they went.

Everything proceeded quietly until the preacher, the Rev. Dr. Marshall, alluded to life after death. This brought forth loud cries of "Rot" and groans which rendered the preacher's voice. He remonstrated with the interrupters, but they shouted the louder, and finally he left the pulpit.

Then the organist played a voluntary and the congregation quietly filed out of the church, leaving the unemployed in possession. Some further noisy scenes followed, after which Mr. Mann thanked the unemployed for their behavior, and they dispersed.

HAS HYDROPHOBIA PLAGUE

Great Heat and Scarcity of Water Make Dogs and Cats Go Mad

LISBON, Aug. 19.—Lisbon is suffering from an epidemic of hydrophobia, in consequence of the terrible heat and the scarcity of water, a great number of mad dogs and cats have been bitten, and the Pasteur institute is full of patients.

During the past few days 123 mad dogs and cats have been killed in the streets.

Officials from the municipal health bureau, armed with revolvers, can be seen hunting the animals through the streets, and many persons remain within doors for fear they will be bitten. Dogs and cats are killed on sight.

A party of German tourists landed here the other day from an excursion steamer. Several members of the party were bitten by a mad dog before they had been in the city two hours, and they were taken immediately to the institute.

ODOR IDENTIFIES THIEF

Special Cable to The Herald.

GENEVA, Aug. 19.—A thief who robbed a chemist's shop at Bienne the other day was arrested through the medium of perfume in his clothes. The thief got away with about \$300 of the chemist's money. In his hurry he upset a bottle of perfume, which was broken on the floor.

The local police hoped that some of the violet scent had fallen on the burglar's clothes, and followed up this slender clue.

They visited the house of a man whom they suspected, and during his absence examined his wardrobe. They found not only the perfumed suit of clothes, but nearly all the money as well. The burglar was arrested on his return home, and confessed.

Diagnoses His Own Case

VIENNA, Aug. 19.—An incident has just occurred in a private sanitarium in Vienna that will doubtless be read by the medical world with interest. At the institution in question the professor of surgery at the Vienna university, Baron Eiselsberg, had undertaken two serious operations, which occupied him four hours. To the great surprise of his assistants, he then gave orders to prepare the table for a third operation, remarking that he had for some time observed in himself all the symptoms of appendicitis and believed that surgical treatment was necessary to check its further advance. A conference of the assistants and an examination of the professor confirmed the latter's diagnosis, and an operation was at once undertaken, the success of which is thus far assured.

MINES AND MINING IN WESTERN STATES DISCOVERIES IN CALIFORNIA COUNTIES

Increased Activity in Mining Operations—Valuable Properties in Course of Successful Development—Wealth of New Districts Attracts Capital and Expert Operators—News in Brief.

Large expenditures of money and large enterprises characterize the mining operations in the northern counties of California. The Mammoth Copper company, the largest producer of copper in Shasta county, will, so it is reported, by the addition of two new blast furnaces increase its output more than 65 per cent and bring the capacity for production up to 90,000 tons.

The Great Western Gold company blew in its second furnace recently, which will enable it to double its output. The Great Western is the second largest copper producer in rank in Shasta county.

The Bully Hill Copper Mining and Smelting company is employing 200 men. The force will be increased soon, when work will be largely extended.

The smelter of the Bakalaka mine at Coram will be opened by April. Between 250 and 300 men are engaged in construction work. The opening of the smelter will give employment to 300 more.

At the Bullychoop mine a ten-stamp mill is running on development ore. The mine is on Bullychoop mountain, about forty miles west of Redding.

Telluride Ore Discovered Last week there was an exhibition at the Santa Fe office on Spring street samples of high grade telluride ore, unearthed in the Slate range in San Bernardino county by Professor John B. Early and Thomas E. Pease, both of Los Angeles. The find is one of the greatest importance. Thorough assays have been made by noted engineers. Speaking of the discovery Mr. Pease is quoted as stating:

"The richest part of the belt, so far as I have been able to determine, is in the Slate range and close to Lone Willow Springs, thirty-five miles northeast of Johannesburg in San Bernardino county. The belt extends in a northeasterly direction from Granite Wells, near Pilot Knob, to and beyond Lone Willow Springs, a distance of twenty-six miles. At the latter place the mineralized zone is six miles wide.

"The ore occurs in parallel rose-quartz veins, evidently formed by thermal spring action and by substitution of a limestone belt, lying between granite and slate. The veins are numerous, ranging from a few inches to 120 feet wide. There are twelve veins of large size to which our attention has been chiefly given.

"The quartz is well mineralized, but in places the mineral occurs in heavy dark bands. Such ore is extremely rich in gold. I have taken over 1000 samples, not including the richer stuff. With the exception of some few which yielded extraordinary values, these have ranged, on the surface, from \$1 to \$1300. We do not expect to get the best values until at least 150 feet is reached, which should be about the limit of the zone of oxidation.

"We have kept this very quiet. We wanted to be sure before giving out any statement, and we have put in six months of close work on the property. We have taken 250 claims, and we propose to give liberal leases to men who are good miners and responsible."

Dredging for Gold

The Gold Bar Dredging company, a syndicate of Los Angeles capitalists, will soon start active work in dredging its property at Diamondville, on Butte creek. The company is capitalizing at \$500,000 and has 132 acres of land under control. A dredge is expected to be in operation inside of three months. An entirely new method of operating the dredge is to be used. Instead of the revolving shovels, or chain of buckets, as is now used, it is to use a steam shovel, such as is used on railroad work. If the project proves a success it will revolutionize the dredge mining interests in some localities, as the present type of dredges costs all the way from \$30,000 to \$100,000 to build and install, while the shovel will cost but \$10,000.

The largest cleanup ever made on a dredger in the Oroville gold fields is said to have been secured recently. The cleanup was made after a twelve days' run, and something over \$30,000 was the result.

The Manhattan Mammoth

Free gold in quantity is being taken from the tunnel on the Manhattan Mammoth Mining company at East Manhattan. The entire face is in ore that pans very high in free gold, and assays as high as \$30 per ton. A ledge has been discovered below the tunnel on the Mammoth property and many fine free gold specimens taken from the workings. From present indications the ledge will be opened up at this point. The operators on the Consolidated Manhattan Mining company, adjoining the Manhattan on the west, are eagerly watching developments on this vein, as it is very close to their line and extending directly into the Consolidated ground. A hasty survey was made and it is believed that the ledge in question will be cut in the Consolidated tunnel within 25 feet. This tunnel is already in 150 feet and the face is all in ore of a good milling grade.

Struck It Rich

One of the strangest freaks of fortune that has come to light in mining circles in western Nevada for several months is that which befell the Commonwealth Mining company, operating at Washoe City. Last year a syndicate of Kansas people obtained possession of the old Commonwealth mine, which had been abandoned for many years. It had been mined for silver and lead principally, the old owners encountering small gold values.

The new owners incorporated for \$10,000,000, and began to advertise that they possessed a marvelous gold bonanza. Their advertising matter was so strong that complaints were made to the postal department, and an inspector was sent to inquire into the matter. A few days before he arrived a rich strike of lead and silver was made in Willow Creek canyon, on one of the company's claims, which has proved to be a bonanza in fact.

The inspector at once made a favorable report to the postal department, and the stockholders immediately withdrew their complaints. Since then a large number of men has been installed and several hundred tons of ore are being extracted daily. The strike has sent many men into the district.

Copper in Mexico

Mexico will make a new high record in copper production this year. It is conservatively estimated the production during the present calendar year will aggregate 150,000,000 pounds, as compared with 115,000,000 pounds last year, of which amount about 120,000,000

AMERICAN CAPITALISTS LOOKING OVER EMERALD ISLE

Visit in Response to Urgings of Dr. Douglas Hyde, Who Recently Toured the United States

By Timothy J. O'Connor Special Cable to The Herald.

DUBLIN, Aug. 19.—A number of Americans are making a business tour of Ireland. Their object is to learn by actual observation what opportunities Ireland offers for the investment of American capital, the belief being that Irish-Americans might share in the industrial revival. The visit has been in response to Dr. Douglas Hyde's invitation when he was in America. Professor Thomas Taylor, musical director of the Irish Choral Society of America, is also here to study the possibilities of Irish music for choral use in America. The party comprises over eighty persons, and is a very representative gathering of Irish-Americans. It is headed by the Rev. J. K. A. Fielding of Chicago, who has given the Gaelic league and industrial movements in Ireland spirit and practical support. Father Fielding originally came from Mooncoin, County Kilkenny. Mr. E. Lahiffe, former city collector of Chicago, also accompanies the party on its tour through Ireland.

The eighteen votes in the majority which constitutes the brilliant young Irish Nationalist, Mr. Thomas Kettle, member of parliament, is one registered under circumstances which are probably without precedent. The Rev. Father Toner of Pittsburg, United States, came all the way from that distant city to register his vote for the Nationalist candidate. He promptly embarked on the return voyage when that duty was performed without delay waiting for the result. He first heard the news of the victory by wireless telegram far out on the Atlantic.

An Old Trivia

It adds to the stirring romance of the incident that Father Toner, Mr. Andrew Kettle (father of the member for East Tyrone), and Canon McCarty, his most influential supporter in the contest, formed in the old days, when the agrarian agitation had just begun, a brilliant triumvirate who did battle for the tenants. The incident illustrates the enthusiasm and the determination with which this latest election was fought. Up to the last the Orange Unionist party fought with desperate tenacity and the leaders of the organization were confident of success.

Find at Searchlight

Following closely in the footsteps of Butte, the greatest copper camp in the world, Searchlight is looming up as the leading gold producer of the state of Nevada. Not only in the extent of her mineralized bodies is she like Butte, but also in the extent of her production. Undoubtedly on some of the richest mining territory in the district. The other day a sewer digger in the streets of Helena, Montana, uncovered a great mineral vein, just as in this camp—a shaft on the Waterspot claim of the Ormond addition has entered and cut a well defined vein carrying values in gold, silver and copper. This shaft has attained a depth of 225 feet and was originally sunk for the purpose of finding water. It was by pure accident that ore was struck. The vein is undoubtedly a continuation of the ledge of the Santa Fe mine which adjoins the end line of the Waterspot claim and exploitation at depth will probably prove such to be the case.

Lying northeast of the Waterspot claim is the Boston mine, owned by the Quartzite Mining company. This prospect consists of a vertical shaft, equipped with hoists, galows frames, pumps and a 300-foot shaft to the water level.

Nuggets of News

It is stated that a rich copper mine has been discovered in Mexico by Anaheim prospectors. The mine is in the maine. A Los Angeles realty firm has secured an option on the mine and will send a mining expert there shortly to make a thorough examination of the property. It is the intention to dispose of the property to New York capitalists. A valuation of \$600,000 has been placed upon the mine.

Z. F. Vaughn of Los Angeles has discovered a process for tempering gold. The process is patented to the Scientific American. By this method it is claimed that the ductile metals are not only hardened, but a cutting edge is obtained, keener and more durable than that of steel, because of the microscopic fineness and smoothness imparted to it.

Frank G. Thesse has deeded to Duke F. Baxter of Los Angeles the White Rock placer mine in Experimental gulch.

The Borax Smith road is being graded in Amargosa canyon in Death Valley, and there are 200 men at work. The thermometer is from 120 to 125 in close to their line and extending directly into the Consolidated ground.

A hasty survey was made and it is believed that the ledge in question will be cut in the Consolidated tunnel within 25 feet. This tunnel is already in 150 feet and the face is all in ore of a good milling grade.

Too Many Convicts Escape

MADRID, Aug. 19.—The authorities of the prison in Melilla, Spanish North Africa, have been much concerned lately over the escape of dangerous convicts from the prison. A dangerous convict named Casanova, who escaped a few days ago, was found by a sergeant in a large sack which was usually placed outside the prison. Casanova explained that a number of convicts had escaped in this way. When the guards were not looking at the prisoners engaged in manual work outside, a man hastily got into the sack and was carried out to await a favorable opportunity to escape.

PRELIMINARY FIELD FOR INVESTMENT

AMERICAN CAPITALISTS LOOKING OVER EMERALD ISLE

Visit in Response to Urgings of Dr. Douglas Hyde, Who Recently Toured the United States

By Timothy J. O'Connor Special Cable to The Herald.

DUBLIN, Aug. 19.—A number of Americans are making a business tour of Ireland. Too Many Convicts Escape

MADRID, Aug. 19.—The authorities of the prison in Melilla, Spanish North Africa, have been much concerned lately over the escape of dangerous convicts from the prison. A dangerous convict named Casanova, who escaped a few days ago, was found by a sergeant in a large sack which was usually placed outside the prison. Casanova explained that a number of convicts had escaped in this way. When the guards were not looking at the prisoners engaged in manual work outside, a man hastily got into the sack and was carried out to await a favorable opportunity to escape.

bon, while in some cases old fashioned ribbon patterned with tiny detached moss rosebuds or sprays of flowers is twisted round the crown and tied in a bow on one side, a cluster of feather tips being introduced under the brim. Brown and mauve are undoubtedly the most popular, crinoline hats in lovely "powder" tones of brown and cinnamon being trimmed with three or four large shaded mauve ostrich feathers, while a charming hat of brown lace-straw boasts a full crown of brown tulle, and is wreathed with mauve convolvuli, the cache-peigne being composed of brown tulle and loops of brown velvet ribbon.

Blue gray and cerise is another very attractive combination in the realm of millinery, and a pretty example of headgear is represented by a "cloche" hat of drawn smoked grey chiffon trimmed with a large plume of shaded grey tulle, the curious fringe caught in the center of the front with a butterfly bow of cerise velvet, the velvet being repeated very effectively on the bandeau at the back. For the plainer hats of the moment the curious fringe which are very wide on either side and very narrow in front and at the back, still rule the taste of the modern elegant, but these are by no means becoming to the majority of women, while the amount of shade they afford to the eyes is so inadequate that their reign is hardly likely to be a very extended one. A somewhat tentative revival of the popularity of the Panama hat for women has taken place, the hats in question being trimmed with spotted scarves in Japanese or Oriental designs.

Short coats are the order of the day for yachting costumes, the bolero being high in favor. Sailor collars are no longer much worn, but are seen in some cases. The most popular fashion is that of the roll collar or narrow turnover collar and revers, the open coat revealing a glimpse of a neat waistcoat underneath. With blue serge, and white and white trimmings are most frequently employed, while the combination of narrow gold and black braid makes a very effective finish.

Another popular form of coat is the short semi-empire jacket, the tiny basque of which reaches to the waistline. This is carried out in rough navy serge, the coat being arranged in pleats back and front, and caught with stitched straps.

Yachting headgear is of a more varied description this year than last. Burnt and sulphur straws are much to be seen, while white wigs as trimming are ubiquitous. Linen hats are likewise in vogue, and the familiar yachting cap has by no means abdicated its place. A high black or black and white demi-toilette is invaluable for a sojourn on a yacht. A supply of scarves, fichus, flowers and two or three different colored centures can be made to transform the costume sufficiently, so that it is scarcely recognizable. The same expedients are recommendable in the case of the all white gown or blouse to which the addition of a little lace bolero will prove invaluable.

Fiber-Grass and Basket Suit Cases. \$2.50 to \$5.00. In our leather goods department. Good things for the beach or mountain. Sanborn, Vail & Co., 217 So. Broadway.

Homeless children received and placed in homes for adoption. Apply Rev. V. Rice, Superintendent Children's Home society, 334 Bradbury building, Los Angeles.

JAP-A-LAC advertisement featuring a large stylized logo and text: 'A STAIN AND VARNISH COMBINED. Renews the finish on everything about the home from cellar to garret, proving the greatest factor in HOUSECLEANING ECONOMY. If you are not already moving or cleaning house, you will probably do one or the other soon. Every time you do either, your furniture becomes more or less scratched and marred. You may frequently be tempted to discard a piece of furniture because of its shabby appearance. JAP-A-LAC is made especially for the purpose of saving such articles. Take a chair or table for instance, —almost any kind will cost you at least \$2.00 or \$3.00. If you discard an old one, you will be compelled to buy a new one to take its place. You can JAP-A-LAC the old one at a cost of 15c and save the difference. There is absolutely nothing else made which will equal JAP-A-LAC for its beauty, durability, ease of application, and non-fading qualities. JAP-A-LAC is colored with the best pigment, —pigment is the only coloring substance used in coloring paint or varnish, which will not fade. Cheap imitations of JAP-A-LAC, which are colored with aniline, have recently been sold under other names, (frequently names containing the word LAC) and although they sometimes produce beautiful results when first applied, they soon fade and lose their brilliancy, because aniline is nothing but a dye. Ask your dealer about JAP-A-LAC. If you want the rich, smooth finish which is produced by this superb article only, —insist on getting JAP-A-LAC. Prices from 15c to \$2.50. Made in fifteen beautiful colors and Natural or Clear. Buy a can today and try it. For sale by Paint, Hardware and Drug dealers. A WARNING AGAINST THE DEALER WHO SUBSTITUTES. When you go to a paint dealer's store to buy JAP-A-LAC, it's because we have convinced you that every word we have said in its favor, is the gospel truth. If the dealer tries to sell you something else which he claims is better, does he not virtually say to you that YOU DON'T KNOW WHAT YOU WANT? Who is the best judge of YOUR intelligence? You, —or some one else? Insist on JAP-A-LAC. The Glidden Varnish Co. Rockefeller Building, Cleveland, O.
