Many Are Making Fortunes in Goldfield, Why Not You?

This Wealth of Gold Was Made in Just 30 Days by the Buyers of Goldfield Stocks. You Can't Make a Mistake by Getting in on the Ground Floor in Any Bonafide Goldfield Proposition

COLUMBIA AT 4 CENTS IS YOUR FORTUNE. TAKE IT

Brief Report

The property of the Columbia Mining Company consists of four claims, viz. Columbia Nos. 1, 2, 3 and 4, each claim being 600 feet wide and 1500 feet long, embracing 20 acres each, or a total of 80 acres. These claims are located in the Goldfield Mining District, County of Nye and State of Nevada, and are situated at the base of Red Mountain, lying about 1/4 of a mile east of the Mohawk Jr., in the bottom of which shaft free gold has been panned from the oxidized matter found in the andesite. There are two distinct veins of quartz in this property, both containing gold. A porphyry dike about 80 feet wide passes through the property. In the Mohawk mine the sensational values were found by sinking through the porphyry and into the andesite, where at water level the bonanza ore was found. The formation of the claims of the Columbia Mining Company is identical with the formation of the Mohawk and it stands almost certain that the same mineral conditions exist in the ledges of the Columbia mine as are found in the ore bodies of the Mohawk. Active development of the property has already commenced and a large force of men are now busy working on the property. Two shafts will be sunk to water level respectively on the two veins traversing the property and it goes without saying that as the shafts go down the price of the stock will go up.

The Incorporation

The Columbia Mining Company is incorporated under the laws of Arizona for \$1,000,000.00—one million shares of stock at a par value of \$1.00 each, every share being fully paid and forever non-assessable.

\$ 20 will buy	500 shares, par value.....	\$ 500
40 will buy	1,000 shares, par value.....	1,000
100 will buy	2,500 shares, par value.....	2,500
250 will buy	6,250 shares, par value.....	6,250
500 will buy	12,500 shares, par value.....	12,500
1000 will buy	25,000 shares, par value.....	25,000

It was only a few years ago that stock in the world-famed Mohawk mine in Goldfield was bought at 4 cents per share; today it is selling on the mining exchange for \$17.00 per share, making a profit of \$42,000.00 from an investment of \$100.00.

It was only a matter of a few years ago that Combination Fraction was selling at 20 cents per share, while today it is selling at \$5.00 per share. A little while later we urged our clients to buy Daisy at 88 cents per share and a few of them acted on our suggestion and afterward sold their stock for \$6.00 per share. We begged our clients to buy Columbia Mountain at 4 cents, which is now selling on the exchange at 85 cents per share, making a profit of \$2025.00 from an investment of \$100.00. We are now urging our clients, with the same certainty of success in our predictions, to buy Columbia Mining at 4 cents per share. Columbia Mining owns twice the acreage of the Mohawk and six times the acreage of Combination Fraction, and as the surface indications are similar and so far as has been ascertained the geological formation is identical with the indications and formations of other mines which have proven bonanzas, according to our predictions there is every reason to believe that the Columbia Mining Company, with its much larger acreage and equal surface indications, has a greater chance for becoming a great gold producing mine than had the other properties just mentioned, when at the same stage of development.

A Tip to Stock Buyers

It is our ambition and our endeavor to build up our brokerage business in such a manner that we can use every one of our clients for a reference. We never place stock upon the market without first inspecting the property ourselves and that is the principal reason for our success. We placed Daisy Extension on the market at 4 cents and it sold to 14 cents within 60 days. Our first offer of stock in the Mohawk Jr. was at 4 cents and during the big slump in the stock market it was the only stock on the San Francisco Exchange that held its own, selling firm at 9 cents per share.

Mr. F. A. McDonald has just returned from a two weeks' stay in Goldfield and after carefully studying the property owned by the Columbia Mining Company he gives as his opinion that it is one of the best speculative buys in the Goldfield district.

Forest J. Swears, E. M., has been retained by the Columbia Mining Company to superintend the development of the mine. Mr. Swears is one of the greatest mining engineers in Nevada. This is not our individual opinion, but the opinion of nearly every one living in Goldfield and we merely mention this fact so that the buyers of Columbia mining stock will know that the development of their property is entrusted to the very best hands that it is possible to employ. After carefully inspecting the property, examining the formation very closely and studying the history of the country, we do not hesitate to stake our reputation on the property that Columbia mining stock will make money for every man that buys of this, the first issue, at the exceptionally low price of 4 cents per share. Even if you do not make \$10,000.00 in the next two years from your investment of \$100.00 you will probably have plenty of opportunity to realize from \$200.00 to \$400.00 from your \$100.00 investment within the next 90 days, and that is making money faster than you ever made it in real estate or any other legitimate business.

LEE MINES NOW IN LIME LIGHT

Prospectors Blaze the Way to New Treasure Vaults—Vast Interests Cluster About the Lee District

The light cavalry of civilization, the prospector and his burro, will soon be a thing of the past, for the automobile with its power and speed, now makes it possible for rapid dashes into the desert and back to the base of supplies almost ere a prospector in the old form would get a start. Take for instance the opening of the Lee district, thirty-two miles across the desert from Rhyolite. In the rush the auto was there first and some sensational drives were made over the boulder-strewn washes that extended as a gash to the precious hills, for several miles out from the townsite of Lee, California. Just a mile away is another townsite called La Mirada, and it's now a problem as to which will be the town. Both are now simply tent cities, but the townspeople at Lee, California, have already projected the building of cement buildings and the installation of a pipe line from the bed of the Amargosa river. A stage line makes semi-weekly trips to the Lee camp, but those who wish to go quickly simply order a seat in one of the many autos that can be had in Rhyolite, and the trip is a very pleasant one indeed.

THE ECHO GILT EDGE

Usually every man or company of men owning mineral lands has no hesitancy in proclaiming that their particular possessions are the best, will pan more, assay higher, and that values will increase, etc., but the proof of the pudding is in eating it; in a mining sense it's what the ore turns out, ton by ton, that counts. In the Echo Lee district there are many astonishingly good claims, claims that bid fair to challenge the attention of the world, but none are more valuable than those held by the Echo Gilt Edge Mining Company. On the property there are three great ledges that outcrop five feet wide on the surface, and at four feet below the surface the ore runs \$5 to the ton, and eighteen inches of the ledge runs over \$300 and is being sacked for shipment. As the miners open up the ledge some of the ore runs over \$500. These veins are true fissures and are in contact at two points on the property. The company holds seven full-size claims and the three ledges traverse the longer axis of these claims, insuring a vast amount of high grade ore. A shaft is now being sunk through the ore, and it is the purpose of the company to develop the property as rapidly as possible. Hoisting apparatus is on its way to the Gilt Edge and it is the purpose of the company to install a mill just as soon as a sufficient quantity of ore has been blocked out to keep a mill in operation. Three shifts of men are working and the shaft is going down at the rate of from four to six feet per day.

The capitalization of the Gilt Edge is \$1,500,000, and the first block of \$50,000 has been sold for 30 cents per share. Wise investors have purchased all of this that could be secured and are eagerly looking for the next block of stock to be issued and wondering what the price will be. It's a good guess that

JOHN DONNELLAN, GOLDFIELD

It will finally go to \$5 per share. Judge Elsom is the general manager and first vice president of the company, and his knowledge of mining, as well as his reputation for fair dealing has induced many with confidence in the venture who really did not know the true value of the great strike made. Just keep your eye on Gilt Edge and see it climb.

JOHN DONNELLAN

The name of "Honest John" may not stick to Jawn D., but it fits very nicely upon big square-toed John Donnellan, the well known Goldfield mine operator and broker. It is not necessary to hand Mr. Donnellan a nice little bunch of posies, for he is altogether too well known to require that kind of "dope," at least in Goldfield, where he is known as "straight" from the word go. He makes it a point to know just how good a property really is before he will touch it and he demands that it be good or his hands down with him. Due to his conservative manner of transacting his brokerage business he enjoys the patronage of a large clientele. When Donnellan makes a notation it's easy to get cash with which to develop the property, simply because he is recognized as being square.

"How remarkably civil Smythe is to that lady he has taken in to supper." "I don't see anything remarkable about it. He is simply acting as any gentleman would to any lady." "But you don't understand. She's his wife."

GOLDFIELD THIRD CHANCE MINING COMPANY

Situated in the heart of the district is the Third Chance mine. Owning upward of twenty-five acres, the company is sinking three shafts, fully equipped with the most modern mining machinery.

A large force of men is being constantly employed. Splendid values have been encountered all the way from the surface and it seems a foregone conclusion that the energy and perseverance displayed by the company will be amply rewarded, as the Third Chance will soon be a producing property.

This company is capitalized at \$1,000,000, par value \$1, with 400,000 shares in the treasury. The shaft on the property is down 150 feet and the equipment consists of a 30 horsepower electric hoist, galloways frame, etc.

This property employs seventeen men and rapid development work is going forward.

The claims—End and side lines, C. O. D.; end and side lines, Atlanta; end lines, Goldfield Combination; section 1, township 3 south, range 42 east, district of Goldfield.

THE GOLD CENTER MINING AND DEVELOPMENT COMPANY

Capitalization, \$1,000,000; property, Surprise claim on Bonanza mountain, underlying the Denver and Northern Light claim, north of the town of Rhyolite, and the Arizona group west of the town of Beatty, near the town of Gold Center.

Development work under the direction of S. G. McMullin, manager, consists of a shaft 100 feet deep on the Surprise claim, from which cross-cutting east and west is being done, exploring for the Denver lode, which is believed to extend through the claim. Development work will be started at once upon the Northern Light claim by prospecting the surface with trenches. Development work will probably begin on the Arizona group during the spring.

This company, in addition to its valuable mining property, has large stock interests in the Bullfrog Rampart company and the Bullfrog Syndicate Mining company and \$20,000 in cash in its treasury.

The officers are J. H. Robeson, president, 219 Boston block, Denver, Colo.; John R. Smith, vice president, Denver, Colo.; W. E. Pasmore, secretary, 219 Boston block, Denver, Colo. The interests of the company in the state of Nevada are looked after by S. G. McMullin of Rhyolite, who is largely interested as a stockholder in the company.

The Bullfrog Syndicate Mining Co. This company organized under the laws of the state of South Dakota; capitalization \$1,000,000; 600,000 shares in its treasury; owns the Jolly Jane, Valley View, Valley View Extension, Valley Queen, Old Gold, Black Jack and Zoo Zoo lode claims; about 120 acres in area; one-half mile north of the Mayflower Consolidated, in the Crystal Springs section of the district.

The surface showing consists of rhyolite dykes similar to those found on the properties already developed in that section.

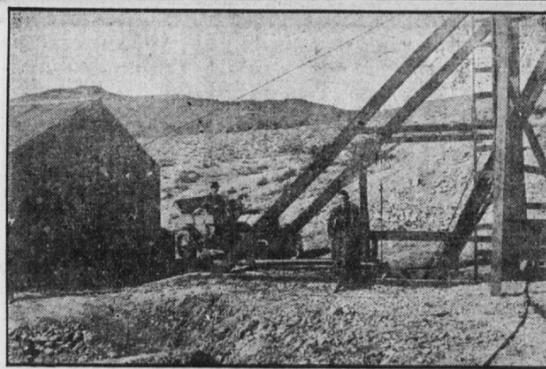

The company has just been organized with the following officers: J. H. Robeson, president, 219 Boston block, Denver, Colo.; I. N. Bunting, vice president, Grand Junction, Colo.; S. G. McMullin, secretary and manager, Rhyolite, Nev., and H. A. Kriedel, treasurer, Denver, Colo.

The company has just been organized and is preparing to make an issue of treasury stock for development purposes.

The Bullfrog Rampart Mining Co. Capitalization \$1,000,000; 400,000 shares in the treasury; organized under the laws of South Dakota.

The officers are J. H. Robeson, president, 219 Boston block, Denver, Colo.; I. N. Bunting, vice president, Grand Junction, Colo.; S. G. McMullin, secretary and manager, Rhyolite, Nev., and H. A. Kriedel, treasurer, Denver, Colo.

The company owns the Daisy, Daisy Extension and Rampart lodes, about 38 acres, lying on the southeast of the great Montgomery-Shoshone mine, on Montgomery mountain, almost adjoining the surface showing on this property is unexcelled in the district.

HOIST ON THE MAYFLOWER-BULLFROG CONSOLIDATED MINES, BULLFROG DISTRICT

surface of this property for a distance of over 3000 feet.

Development work has been progressing since last November under the direction of S. G. McMullin, secretary and manager. The company is capitalized for \$2,000,000, with 800,000 shares in the treasury. Development work is being prosecuted from the crosscut of the main run for a distance of about 250 feet to cut the ledge to a depth which will be completed in another month.

This company is very strong, being controlled by San Francisco capital, associated with Mr. McMullin. Alex J. Young of San Francisco is president, John M. Keith of San Francisco, vice president, S. G. McMullin, manager, secretary and treasurer, Percival B. Kahn, the hustling San Francisco broker, is assistant secretary, and the transfer office is with him in the Krieder building, San Francisco.

D. MACKENZIE & CO., INC.

This company holds the world's record for rapid mining. On June 3, 1906, Mr. Mackenzie secured the organization of the Francis-Mohawk and in thirty days successfully financed the company, selling the stock at 1 1/2 cents to 19 cents a share, now quoted above par. In fifty-nine days from organization the lease was fully equipped, the shaft down to 220 feet, with 175 feet of crosscutting and a car of high-grade at the sampler. In one hundred days a dividend of 5 cents was declared and \$45,000 was paid to stockholders. November 1, less than thirty days afterward, another dividend of 10 cents a share was announced, and another dividend of 10 cents was announced and \$31,000 was paid to the clients November 15. Just twenty-three days later the third dividend of 10 cents, payable January 1, was announced and another \$31,000 was remitted. At the same time it was announced that a quarterly dividend of 10 cents per share, or 40 per cent per annum on par value would thereafter be paid on an investment which, considering the dividends already paid, is an enormous and legitimate profit on stock that cost the majority nothing.

The Mackenzie company is now developing the Francis No. 2 on the Jumbo Extension and is coming into the ore. A Herald man was at the bottom of a shaft last week and sampled the rock and found it to contain good values. Work has gone forward on the Francis-Mohawk and Madonna mines as well as the Combination Extension and Jupiter. The Red Boy and Saratoga are crosscutting at 150 feet levels to ledges that

carry exceedingly good values. The Mackenzie properties are all equipped with the latest in mining machinery and none excel them in this one particular. Superintendent Oliver is a man of rare good judgment, with a world of experience in the mining field, and it is largely due to him that the excellent results are being attained in the Mackenzie properties.

RHYOLITE BROKERAGE CO.

It's something to say, "That firm is on the square," and it's also a matter of pride to those composing the firm that the people generally recognize that they are to be trusted in matters relating to the flotation of big corporations (nothing is done on the half-shell principle in the Bullfrog district), in the selling of stocks or in the sale of valuable claims. This spirit of fairness and square business dealing is a valuable asset to any business, but has applied to that of handling big deals it is one of paramount importance.

The prospector who has claims to sell is usually a man of limited business experience and in the hands of "sharks" is an easy victim. The avowed prospector learns by hard experience who will treat him with human consideration and once he finds a "man" he stays with that one through thick and thin. Others may knock, vilify, traduce, but the prospector, like the burro, is not easily led aside from the straight path and therefore "sticks."

Again it may be a man of means who wishes to buy mining property. He may not know the value of the property offered; may not be in position to line up with a mining engineer and must, therefore, depend upon some brokerage firm to attend to his interests. If he decides wisely he allies himself with a firm of known reputation upon whom he can depend to care for his business as they would his own. The Rhyolite Brokerage company does not claim infallibility, but does all that a firm of that kind can do for its clients and when one takes into consideration the fact that Judge Ray, John Brockman and John Largent are in control of the affairs of the company that alone speaks volumes.

Social Gymnastics  
"How does that pushing woman manage it? She is getting along in society by leaps and bounds."  
"I suppose she manages to do it by the hops she gives."

LITIGATION OVER IN HAYSEED MINE

Compromise Effected Between Contending Interests—Properties to Be Developed Rapidly. High Assays

About three years ago two half-breed Indians, the Lee boys, Dick and Gus, located the State Line and Hayseed mines in what is now known as the Lee district. Old "desert rats" claim this to be the "lost Fryfogle mine," over which there has been so much speculation during a quarter of a century past. A man by the name of Del Bondio secured an option on the claims from the Lees a year ago and afterward Sutherland and Mackenzie, well known operators in the Bullfrog district, heard of the claims, crossed the desert, looked them over, returned to the district loaded with cash and doubled Del Bondio's price. The Lees accepted this, disregarding the former contract with Del Bondio. The latter filed suit against the Lees in the Echo-Lee district.

End of Litigation

Litigation has been pending up to within the last week when John Largent, the secretary of the Rhyolite Brokerage company, took the matter in hand on behalf of the parties who wished to develop the property, and as Mr. Largent has a way of doing things it was not long before a compromise was effected and he secured an option upon the property for \$200,000. By the terms of the agreement reached Sutherland and Mackenzie were to hold two-thirds of the stock of the companies in litigation. Mr. Largent formed a new company to take over the property on that basis. The title was cleared perfectly and the company was organized under the name of the Hayseed Mining company, capitalization \$1,250,000, par value \$1 per share, with 450,000 shares in the treasury. One hundred thousand shares of this stock was placed upon the market immediately upon the organization of the company at 50 cents per share and within twelve hours was oversubscribed 25,000 shares. Interested people are bidding 10 cents advance per share, but none of the stock is for sale. Before taking over the property the engineer, Mr. Boyd, made a careful examination of the property and thirty-two assays were made, ranging from \$5.50 to \$123,000 per ton in gold. The Hayseed and State Line are considered second to none in Nevada, and an iron king from Duluth, Minn., recently offered \$49,000 for the property. A Herald man found several panings from the surface and got a good string of colors in every case. The Hayseed is considered by mining men to be second to none in Nevada.

Carloads of Fine Silver

Arizona produced 2,747,800 ounces of silver in the year 1906. Colorado leads all the states with 12,245,100 ounces in the same time; Utah comes next with 11,538,000 ounces and Montana has a close head with 11,478,700 ounces. Fifty-six million one hundred eighty-three thousand five hundred was produced throughout the United States. It would take a train of 112 cars to carry it if each car was loaded with 40,000 pounds, or 20 tons.
