HILO WANTS PAPER MILL

Work May Commence Within Six Months.

HILO, Sept. 26.—S. M. Mayer, of Seattle, who has been in the city the past week investigating the supply of bagasse available for his proposed paper factory, states that he is well pleased with the prospect in Hilo and vicinity. He likes the climate here better than anywhere else on the Islands and on that ground would prefer to locate his paper mill here if his further investigation in other lines terminates satisfactorily. Mr. Mayer, as was stated in last week's Tribune, represents the American Talc-Asbestos Co., of Seattle, a concern with solid financial backing and with immense ledges of talc to draw upon. These talc ledges are in Skagit County, Washington and are among the most famous in the world.

The primary reason for the company's investigation of the possibilities of paper making in Hawaii, is that a paper mill here would give a good outlet for talc. In the glazed papers and cardboards, a large proportion of talc is used for surfacing. It is also figured in the scheme, that paper manufactured from bagasse can be shipped around the Horn to New York and successfully compete with the eastern mills.

Mr. Mayer has had talks with the managers of several of the plantations here and feels very much encouraged. He proposes to pay a price for the bagasse that will enable mills using it for fuel to burn oil or coal instead and make money by the change.

To warrant the erection of a paper manufactory, Mr. Mayer says there must be from forty to sixty thousand tons of bagasse available, the first year. To erect mills to handle such a quantity an outlay of \$150,000 to \$200,000, and when running would employ from 250 to 500 hands. The labor required in the paper factory is not of a character that would draw from the plantation supply.

Mr. Mayer estimates that this island produces 130,000 tons of bagasse annually. He believes a paper factory in Hilo could handle bagasse from the plantations on the other side of the island. The product of those plantations would have to be reduced by concentration before shipment.

If Mr. Mayer succeeds in securing a sufficient quantity of bagasse to warrant the erection of a mill, he believes work may be started within six months after his plans have been approved by the Seattle Board of Directors. So far as he has interviewed the business men of Hilo, Mr. Mayer states that he has found the best of encouragement and a willingness to cooperate in any way possible.

If on mature investigation Mr. Mayer finds it feasible to manufacture paper from bagasse, here is an opportunity for Hilo to make a great step forward. If there is a paper mill in the Islands it must be located here.

IMPORTANT SCIENTIFIC DISCOVERY.

A Clinical Preparation That Positively Kills the Dandruff Germ.

A most important discovery has been made after a year's patient laboratory work aimed in a certain direction—it is Newbro's Herpicide, a preparation that cures baldness, prevents falling hair, and speedily and permanently eradicates dandruff. These evils are caused by a germ or parasite that burrows into the scalp, throwing up dandruff, as it seeks to sap the life of the hair at the root. There's no baldness without falling or thin hair, no thin hair without dandruff, and no dandruff if the germ is destroyed. Newbro's Herpicide is the only preparation that will do the work. "Destroy the cause, you remove the effect."

The unmanned lightskip at the Otter Rock, near Islay, on the west coast of Scotland, has a steel hull of extra strength, divided into three water-tight compartments, and carries two large steel gas-tanks. The powerful light, mounted in a lantern supported on a steel tower at a height of twenty-five feet above water-level, is visible from eight to twelve miles. The gas is stored in the tanks at a pressure of 150 to 180 pounds per square inch, is fed to the burners by an efficient regulating apparatus, and a single filling of the tanks can be depended upon to keep the light burning night and day for several months. A fog-bell is kept ringing by the gas as it passes to the burners.
