

The Fireproof Roof

Sparks or even live coals have no effect on a Vulcanite roof. It is recognized by the fire underwriters as a safeguard against loss, and this feature alone makes it worth many times its cost in times of emergency.

But while your roof may be called upon to withstand fire once in a lifetime, it is called upon to resist the weather every day. Frost and rain, and hail and sleet, and snow and drought and heavy winds all combine every year in an attack on your property.

The five best ready roofings in the United States were placed on test freight cars by the Harriman lines. These test cars were run all over the country for a period of over two years. The roofs had to stand every variety of weather the country can produce and a continual fire test in the shape of live sparks and coals from the engine.

was the one roof that made good and was officially adopted by the Harriman lines for freight cars. The Rock Island lines also use Vulcanite as a result of a similar test. It is a significant fact, that without repairs or painting of any kind, the test cars are still in use.

Your buildings will never be called on to resist any more severe tests than these freight cars were exposed to, and the fact that Vulcanite alone survived out of the five acknowledged roofing leaders of the country, should be a strong recommendation to you, to at least investigate Vulcanite before you buy another brand.
