

COST OF PRODUCTION

On the North Dakota state demonstration farms. The number of bushels of hard wheat necessary to pay the cost of production in the years:

Table with 2 columns: Year (06-13) and Cost of Production (13.70, 8.96, 8.85, 9.47, 9.04, 9.66, 13.84, 11.52, 10.97, 11.22, 16.85)

The cost of producing wheat has been worked out on the North Dakota demonstration farms for the years 1906 to 1913, inclusive.

On the accompanying chart the cost is expressed in the number of bushels of wheat required to produce the crop. The cost includes rent of land.

In 1913 it required 13.84 bushels of wheat to pay for the cost of raising an acre of wheat, and in 1908 it was the lowest, 8.85 bushels. The average cost for the eight years was nearly eleven bushels.

MEANS FINANCIAL PROFIT TO FARMERS

Every Locality Should Have a Co-operative Creamery.

WHAT EXPERIENCE HAS SHOWN

The advantages of a co-operative creamery or cheese factory are many. However, the most important point to consider is that the patrons will receive more net money by operating their own factory than they will by patronizing outside concerns.

In some places the farmers are afraid to organize and operate their own factories, for fear of outside competition. It is not at all likely that a time will come when a co-operative creamery or cheese factory with proper patronage can be seriously injured in this way.

It should be remembered that there is a period of development for every creamery or cheese factory, just as for any business or farm. The first year things are not as well arranged as they should be later.

To secure the best results from a rotation of crops live stock must be kept. The rotation of crops with live stock balances up the farm operations in many ways.

ALFALFA FOR CATTLE.

Experiments Show Good Results in Feeding Steers. In Kansas it was found that in feeding steers with corn-and-cob meal and alfalfa hay, the cost of 100 pounds of gain was \$5.13.

COOPS FOR POULTRY.

Coops should be roomy, well ventilated, dry and clean. A removable floor is the most desirable, as it will prevent dampness and may be easily cleaned.

For the first few months see that your pigs have food that makes bone, muscle and size of body. Get the frame up, then fill in the fat.

SIMPLE PLAN FOR ROTATION OF CROPS

Plant Ground to Corn Every Third or Fourth Year.

INCREASED YIELD THE RESULT

Rotation of crops means growing different crops on the same field and in some regular succession. One of the simplest is to introduce a corn crop every third or fourth year instead of growing the same crop every year.

This shows the advantage that comes from adding one crop as well as the added returns in grain when some of the crops are fed and the manure returned to the land. If the animals on the farm are good ones they will return a good deal more than market prices for the feed consumed.

To secure the best results from a rotation of crops live stock must be kept. The rotation of crops with live stock balances up the farm operations in many ways.

Water Power Saves Coal. It is claimed that under the most favorable conditions a pound of coal can be made to produce one horsepower hour.

Wall Paper Cleaner.

The following mixture to clean wall paper has been used with the best results for years, says Popular Mechanics: Thoroughly mix together three parts of wheat flour and one part of powdered whiting, then add sufficient water to make a dough.

New Rubber Substitute.

Among the most recent substitutes for rubber is seaweed. In England there is being made a product from seaweed which is said to be as good as rubber for the manufacture of tires and similar purposes.

To Find Acid in Oil.

A simple method of ascertaining whether an oil contains acid or not is to immerse a polished copper plate in it for a few minutes, says the American Machinist.

To Clean an Oil Kettle.

To clean an oil stove hold it in water containing one teaspoonful of lye to a quart of water. Put wooden blocks under the stove in the kettle so the heat won't crack it.

WHEN A CAR GOES WRONG.

Practical Method of Discovering Automobile Troubles.

A systematic way should be adopted when a car goes wrong to diagnose the ailment of the sick car. First examine for a good spark. Without this no motor will run. Lay the plug on the cylinder to determine if a good one is present. If not, correct this first. Then crank the motor, and if it does not go next examine the carburetor, but it is better to get the motor running if possible before changing the fuel and air supply.

All the above means of procedure is the correct way, presuming the gasoline, oil and water supply are in their proper quantities. No car will run without these. It is also presumed the car is not broken in any of its parts so as to interfere with its running. Remember if a car has run it will do so again under the same circumstances.

MAMMOTH DREDGES.

New Panama Excavators Are Equipped With Giant Dippers.

No less than thirty four men can find standing room in one of the dippers of the new Panama canal dredges that are now being completed at a plant in New York harbor. The dippers of each of these mammoth dredges measure no less than 100 feet 9 1/2 inches in height from the bottom band to the upper edge of their manganese steel lips.

In other words, a dredge of this tremendous capacity could excavate the 1,200 acreage of Central park and Prospect park in New York one foot deep in less than six months' working time. These dredges were ordered by the isthmian canal commission as a part of the permanent equipment for the maintenance of the canal and for immediate use in completing the channel through Gatun lake and the Culebra cut.

The rock dippers are of extra massive construction and are fitted with heavy manganese steel teeth. The dippers are hung on a three and one-fourth inch single part wire rope hoisting cable in accordance with the latest practice. These cables are the largest ever manufactured for a dredge. The dredges are designed to dig to a depth of fifty feet.—Engineering News.

The following mixture to clean wall paper has been used with the best results for years, says Popular Mechanics: Thoroughly mix together three parts of wheat flour and one part of powdered whiting, then add sufficient water to make a dough. To clean a dirty papered wall take a piece of the dough that can be easily grasped in the hand, press it against the surface and make a long stroke, downward. During the process of cleaning keep kneading the dirt into the dough.

Among the most recent substitutes for rubber is seaweed. In England there is being made a product from seaweed which is said to be as good as rubber for the manufacture of tires and similar purposes, and, while it has not been used for boots, the experiments which have been made in this direction seem to indicate that it will be found cheaper and more durable than either leather or rubber.

To Find Acid in Oil.

A simple method of ascertaining whether an oil contains acid or not is to immerse a polished copper plate in it for a few minutes, says the American Machinist. If no acid is present there will be no change in the appearance of the plate, but a trace of acid will dim the surface.

To Clean an Oil Kettle.

To clean an oil stove hold it in water containing one teaspoonful of lye to a quart of water. Put wooden blocks under the stove in the kettle so the heat won't crack it.

Notice for Publication

U. S. Land Office at Great Falls, Montana, June 13, 1914. Notice is hereby given that JOHN S. SMITH, of Virgelle, Montana, who on September 1, 1911, made homestead entry, serial No. 155419, for lots 2 and 4, SW 1/4, section 4, lot 25 north, range 11 east, and SW 1/4, section 22, township 26 north, range 11 east, and SW 1/4, section 11, township 26 north, range 11 east, and SW 1/4, section 12, township 26 north, range 11 east, and SW 1/4, section 13, township 26 north, range 11 east, and SW 1/4, section 14, township 26 north, range 11 east, and SW 1/4, section 15, township 26 north, range 11 east, and SW 1/4, section 16, township 26 north, range 11 east, and SW 1/4, section 17, township 26 north, range 11 east, and SW 1/4, section 18, township 26 north, range 11 east, and SW 1/4, section 19, township 26 north, range 11 east, and SW 1/4, section 20, township 26 north, range 11 east, and SW 1/4, section 21, township 26 north, range 11 east, and SW 1/4, section 22, township 26 north, range 11 east, and SW 1/4, section 23, township 26 north, range 11 east, and SW 1/4,
