

AMONG OUR MINERS

The Cream of the Mining News Collected for Herald Readers.

THE GARFIELD MINES

What an Experienced Miner Has to Say Regarding the Con. Mine.

IN THE "OLD RELIABLE"

Interesting Mining News from the Bingham Bulletin.

The Mines of the Park—What the Record Has to Say Regarding Them—The Three Mile Mine Near Brigham City—W. A. Clark's Bonanza—The Old Hawkeye Mine—The Humbung Now on the Shipping List—Copper Discoveries in the Buckskin Mountains—The Sale of the Birthday Mine, at Willow Creek, Idaho—Mining Notes and Personals.

Notwithstanding the depression in the lead and silver market, there seems to be no visible let-up in the interest taken in mining matters, and from all over the state the news is received that in nearly all the mining camps there is renewed activity in mining matters, and that not only new discoveries have been made, but that important sales of valuable properties have been recorded. In many of the camps, especially in camps that have been practically abandoned, there seems to be a revival of interest of late, and in many instances rich strikes have been reported in these districts.

Silver City, Tintic, which for many years has been classed as a "dead" mine, is at present one of the most active camps in the state, and developments now in hand and in contemplation promise to bring this once famous old district to the front once again as a wonderful producer of the precious metals. The Old Swansea, an instance of what the Silver City end of Tintic district has in store for the future, and the success that has attended the thorough development of this old-time surface producer has had its effect, and a beneficial one, for now work is being pushed on a dozen or more properties in that locality, nearly every one of which will soon attract attention as productive and paying mines.

The South Swansea, adjoining the Swansea, is a demonstration of the assertion that the mineral deposits around Silver City have not all been exhausted by any means. In fact, the workings in this mine and in the Old Swansea, prove conclusively that the ore bodies of that locality have hardly been touched as yet, and that the true and permanent ore chutes are deposited below the pyritic formation, under which it exists in larger deposits, and richer.

The Old Swansea, which the South Swansea are both below the pyrites, and, in consequence, these properties are on a dividend paying basis today, which is a great deal with silver down to 45 cents an ounce and quoted at \$2.60 a hundred. In the immediate vicinity of these two properties there are a number of other properties, old producers, that have been rescued from oblivion, so to speak, that are now classed with the producing mines of the district.

The Four Aces in that locality, the Sunbeam Consolidated is another while, the Old Sheldridge-Bonanza gives every indication of soon re-entering the list, along with the Hornum and half a dozen other once famous mines, and the difference this time will be that these resurrected properties will now prove to be permanent producers, as every effort is being made to get down the pyrites, where it has been demonstrated that the ore deposits are more permanent and carry greater values.

THE NORTHERN LIGHT MINE. One of the important features of the past week in mining circles has been the letting of the contract for the building of the Northern Light cyanide mill. This plant is to have a capacity of 200 tons daily, and is to be one of the most perfect mills of the character ever built in the west. The building is to be put up as speedily as possible and the plant is to be ready for operation in the next few days.

STATI LINE AND EAGLE DISTRICTS. Attention just now is being largely directed to the new State Line district, in Iron county. This district, which is being made up of the promise of becoming a formidable rival to Cripple Creek, in Colorado, to Johannesburg, in South Africa, and in fact, to any of the great mining camps in this or any other country, from the mere fact that the gold ledges there are large and cover a large area of country, and the conditions exist in Eagle Valley district, where the ledges are even larger than in the State Line. Eagle Valley is located in Nevada, and adjoins the State Line district on the west. The ledges in both of these districts are largely gold bearing, although near Line City there is a cross ledge that carries silver in large quantities and in an almost native state. As yet no mills have been built in either district, but if the development

work now in hand or in contemplation bears out surface indications, there will be a dozen mills in operation there within the next year. The most direct route to State Line is via Millford, on the Union Pacific railroad. From this point the road of the trip will have to be made by stage to Desert Springs, at which point there is an excellent wagon road. From Desert Springs, up in the mountains a distance of twelve or fifteen miles, the new camp of Line City is to be found. The town is typical of all mining camps in their infancy, but if the camp comes to the front, it will be one of the most important of the west. During its brief history, it will boast of a railroad, telephone and telegraphic communications and electric lights within a year from now.

SALE OF THE HENRY M. MINE. The sale of the Henry M. group of mines in Bingham, which was consummated last Saturday, is one of the most important transfers of valuable mining ground to be made in Utah for several months past. The Henry M. group, comprising twelve claims, is located in Carr Fork gulch, and is said to be one of the richest gold mines in the district. The ore is low grade, but abundant, in exhaustless quantities, and it has been demonstrated that it can be treated at a great saving. The purchase price of the mine, including the purchase of the machinery, which will develop the property in a most thorough manner, and it is the general understanding that it is the intention to put up a large mill at an early date. This means much for Bingham, and may result in the development of other gold properties in the same locality.

THE GARFIELD MINE. What a Miner Says About the Big Tunnel Mobs. One day this week, says the Bingham City Bugler, a reporter interviewed a miner who has in the past been known as a "hard" man, and who is now in the neighborhood of the old Garfield mine, or Consolidated Mining and Milling company's great 2,300-foot tunnel. The miner, who was standing in the neighborhood of the old Garfield mine, or Consolidated Mining and Milling company's great 2,300-foot tunnel, said that he had been in the mine for several years, and that he had seen a great deal of the work that has been done there. He said that the mine was a very rich one, and that he had seen a great deal of the work that has been done there. He said that the mine was a very rich one, and that he had seen a great deal of the work that has been done there.

THE MINE OF THE PARK. What the Record Has to Say Regarding Them. Track laying in the Ontario 600 rapid tunnel is going forward quite rapidly and a 200-foot rail is being put down. A report is reported to have made a strike of good ore within the past few days, but at this writing it cannot be verified. Mr. H. Houston, who has been busy for the past two months clearing up the second-class ore left at the Crescent mine, has completed the work yesterday and the ore is now being brought down the track to the beaching house. He also reported that he had discovered a ledge in the old workings of the mine and no more will be let, at least not for the present.

Mining Notes and Personals. The Humbung mine, which promises to develop into one of the great producers in Tintic mining district, will have its first shipment of ore on the market today, and it is expected that it will carry a week regularly hereafter. From all reports the Humbung is "a gem of purest ray serene."

Hon. J. P. Brown, of Kanab, who has been in the city during the past few days attending to business, has been interested in the copper deposits discovered last spring in the Buckeye mountains. He stated that he had seen the metal and also well in gold, and that they will probably receive considerable attention during the coming season.

The mines of Willow Creek, north of House City, Idaho, continue to attract a great deal of attention, especially since B. D. Brown, of Dunth, Idaho, has just purchased the Birch group of mines, for \$2,000. The Willow Creek mine, owned by Ogen parties, is located in Willow Creek gulch, and is said to be one of the richest gold mines in the district. The ore is low grade, but abundant, in exhaustless quantities, and it has been demonstrated that it can be treated at a great saving.

He stated that he had seen the metal and also well in gold, and that they will probably receive considerable attention during the coming season.

ing iron quartz has been uncovered and pay rock may be the result. This is the third time that gold bearing quartz has been discovered in the area, and it is nothing that would say has been developed.

Several men quit the Comstock mine this week because they could not get their pay. One of them said that a small strike of ore was discovered in the tunnel, but that when he left it was difficult to say whether it would ever be paid for. He said that the ore was very rich, and that there is no hope of developing the mine except by continuing to work it. He said that he thought of sinking without an expense that cannot now be estimated. The ore, however, is so rich that the quantity of it altogether different from that encountered in the early work done in the big tunnel.

The Anchor is hauling and preparing to make a shipment of iron ore, and the rock load is if it would yield a handsome profit. The vein from which it is being hauled is a very rich one, and is being worked by means of hand labor. Latest reports are to the effect that by running it through a mill, it will yield a fair profit. The first handling saves the material, while the second will be a very valuable material. It is thought the rock will handle the new ore to be hauled.

Matters at the Constellation are reported by interested parties as looking extremely favorable. It is expected that the near future, and a diagram of the vein and specimens from the works shown us in this week's issue, will be a very valuable one. The report comes from parties that could not possibly hope to succeed before the present becomes a divided party. The property is equipped with a very fine engine, and the heavy machinery is being put up in a most thorough manner, and it is the general understanding that it is the intention to put up a large mill at an early date. This means much for Bingham, and may result in the development of other gold properties in the same locality.

Probably the Greatest Gold Mine in the World. If the reports received from the Mayflower mine near Whitehall are true, says the Bingham City Bugler, they are apparently from a thoroughly reliable source—W. A. Clark has probably the greatest gold mine in the world. The report is that the mine is a very rich one, and that it is being worked by means of hand labor. Latest reports are to the effect that by running it through a mill, it will yield a fair profit. The first handling saves the material, while the second will be a very valuable material. It is thought the rock will handle the new ore to be hauled.

W. A. CLARK'S BONANZA. Probably the Greatest Gold Mine in the World. If the reports received from the Mayflower mine near Whitehall are true, says the Bingham City Bugler, they are apparently from a thoroughly reliable source—W. A. Clark has probably the greatest gold mine in the world. The report is that the mine is a very rich one, and that it is being worked by means of hand labor. Latest reports are to the effect that by running it through a mill, it will yield a fair profit. The first handling saves the material, while the second will be a very valuable material. Purgatorial Pills.

The druggist would hardly smile if you asked for "purgatorial pills." There are many of them. But he would probably recommend a pill that did not gripe—a sugar-coated pill, gentle in action, and sure in effect. What are they called? Ayer's Cathartic Pills.

A report is reported to have made a strike of good ore within the past few days, but at this writing it cannot be verified. Mr. H. Houston, who has been busy for the past two months clearing up the second-class ore left at the Crescent mine, has completed the work yesterday and the ore is now being brought down the track to the beaching house. He also reported that he had discovered a ledge in the old workings of the mine and no more will be let, at least not for the present.

Mining Notes and Personals. The Humbung mine, which promises to develop into one of the great producers in Tintic mining district, will have its first shipment of ore on the market today, and it is expected that it will carry a week regularly hereafter. From all reports the Humbung is "a gem of purest ray serene."

Hon. J. P. Brown, of Kanab, who has been in the city during the past few days attending to business, has been interested in the copper deposits discovered last spring in the Buckeye mountains. He stated that he had seen the metal and also well in gold, and that they will probably receive considerable attention during the coming season.

The mines of Willow Creek, north of House City, Idaho, continue to attract a great deal of attention, especially since B. D. Brown, of Dunth, Idaho, has just purchased the Birch group of mines, for \$2,000. The Willow Creek mine, owned by Ogen parties, is located in Willow Creek gulch, and is said to be one of the richest gold mines in the district. The ore is low grade, but abundant, in exhaustless quantities, and it has been demonstrated that it can be treated at a great saving.

The Ontario 600 rapid tunnel is going forward quite rapidly and a 200-foot rail is being put down. NEWS FROM NEARBY CITIES AND TOWNS

LATEST REPUBLICAN SCHEME AT LOGAN. A new republican sheet has appeared in our country, and is being first issued, with few exceptions, stood for free silver, but for some reason a great change came over the party, and it succeeded in securing a convention to the St. Francis convention to work for McKinley, and it appears now that that party has broken up, and the party is united with a few disgruntled Democrats, to get out a citizens ticket, and believe we have reason to believe that the citizens ticket is the best.

PROVO NOTES—WYOMING WHISPERERS—Whittener at Taylorville-Park City Athletics. LOGAN, Oct. 3.—The latest republican scheme is causing considerable excitement among the people of Logan. At the beginning of the campaign nearly all Republicans, with few exceptions, stood for free silver, but for some reason a great change came over the party, and it succeeded in securing a convention to the St. Francis convention to work for McKinley, and it appears now that that party has broken up, and the party is united with a few disgruntled Democrats, to get out a citizens ticket, and believe we have reason to believe that the citizens ticket is the best.
