

GREAT LEDGE OF RICH COPPER ORE

Major Stanton Tells of Latest Sensational Find in Idaho.

VEIN OF 60 PER CENT ROCK

ANOTHER GOLD STRIKE—TETRO'S FINE SHOWING.

WITH most interesting news concerning his own company's operations, an account of a most wonderful copper strike and other data, Major W. A. Stanton, manager of the Eudora Gold Mining & Milling company's mines, seven miles north of Salmon City, Idaho, is down from camp. Great interest is taken in Salmon City, the major reports, over a sensational strike of copper ore recently made about thirty miles southwest of Salmon. Barns & McHenry of the latter place have taken a hold on it, and they are now opening it up.

Most conservative reports on the discovery are to the effect that the ledge at the surface is all of thirty feet wide, and that the ore carries 60 per cent in copper for the entire width, with a small showing in gold and silver. From the location of the discovery it is thought to be an easterly extension of the well-known Blackbird district, in Lemhi county, and if the ore holds out, it will prove the greatest copper mine in Idaho.

Of the Eudora company's property, Manager Stanton says the ten-stamp mill is now pounding away regularly on ore being supplied from the different levels in the 650-foot shaft, the drifts from the bottom of which are dry, ore bodies eighteen feet wide. Before leaving camp, Manager Stanton saw work commenced on a new 650-foot tunnel that will tap and drain the different veins in the company's five claims to a depth of more than 500 feet, and make an economical outlet for the ores. To hurry this work along Major Stanton will install a compressor and power drill plant for the purpose. Steam capacity is already provided to stand the extra burden, and he intends to make a record in driving that piece of tunnel.

The Indian Creek combination of Michigan people, who are operating on that stream, twenty-five miles below Salmon, are just preparing to increase their mill to a twenty-stamp plant, and from what the major has heard they have a most promising gold property. He will return to camp in a few days.

MINERAL AROUND POCATELLO.

Asbestos Mine Four Miles From Town—Locations in All Directions.

L. C. Carter came in from the hills yesterday with very good specimens of asbestos from his Comet mine. He reports that he has strata of this mineral running through a soft, greenish rock, and growing continually better as he sinks on it. Mr. Carter says that he has little knowledge of asbestos mining, but that he has worked in asbestos mines, and that he has seen the mineral come in such formations, and that the whole lead will develop into asbestos as he sinks on it. If this is true, Mr. Carter says he will have a ledge twenty-five feet wide. One specimen which Mr. Carter had last evening indicated a good quality of asbestos. The Comet is about four miles from Pocatello.

Last evening and this morning placer locations covering 160 acres in sections 22 and 23, township 6, range 34 east, were filed for record. This, as nearly as we figure it, is about the old race track, and immediately adjoining the townsite. The locators are J. H. Brady, Fred W. Kraft, A. B. Melville, Wilber S. Cheney, Laura M. Brady, Clara M. James, and Benjamin G. Rice, and the claims are the Pocatello group named the Bessie, the Mary, the Lucky Boy, the Joker, the Americus, the James and the Just in Time.

Larry Hewitt, located a south extension of the well known Chief mine, which was discovered by L. C. Carter some twelve years ago. Larry has an eight-foot vein, and has secured assays running 35 per cent copper. He has already begun to sink a hole on his claim.

W. M. Wantland came in from McCammon last night. He was in the race for the Belle Marsh mine, together with a whole lot of others, and says that he is the man who won it. He says that he had his notice up first on one end of the claim, while the others were scrambling at the other end.

Everybody has the mining fever. Even Rev. George H. Perry this morning exhibited some fine-looking rock from a claim which he and Dr. Howard located down about the old race track. Frank A. Law and E. O. Leonard have located two good-looking claims on the eastern hills named them Mountain Spring mines Nos. 1 and 2.

BACK FROM DE LAMAR.

James W. Neill Has Sampled Fifteen Miles of Workings in De Lamar.

James W. Neill, who, assisted by a small army of assistants, has been several weeks sampling the De Lamar, April Fool and Macdonald companies' mines at De Lamar, Nev., arrived home yesterday morning and spent the greater part of the day in conference with Simon Bamberger, from whom he accepted the commission to do the work and compile a report of his findings. Mr. Neill, of course, declined to discuss the merits of the properties with other than Mr. Bamberger himself. He said, however, that the sampling had been a most exhaustive one in each of the mines named, and as he had been daily forwarding numerous five-pound sacks of samples to the assayer, he hoped to have his report completed during the next few days. Over fifteen miles of workings were examined and sampled, and some tail rustling had to be done to get through as soon as he did.

That Mr. Neill was favorably impressed with the properties was easily detected in his manner of speech, and that the report he will submit to Mr. Bamberger will bear out the latter's previously conceived ideas of the value of the mines there can hardly be a doubt. With the skeleton of what Mr. Neill's report will contain fastened in his memory, Mr. Bamberger will have the train for the east tomorrow morning.

ORE AND BULLION MARKET.

Increase in Shipments Past Week Make Settlements Very Heavy. The past week in the ore and bullion market has been the heaviest for some time, the increase being attributed principally to the fact that some of the gold producers have been depositing healthy rolls as a result of the previous month's production. At the same time, the camps of Alta, Deep Creek, Stockton, Tonopah and others, from which shipments were very infrequent during the winter and bad road period of the spring, are being heard from now and their contributions all help to swell the total. The Consolidated Mercury mine never more productive than right now; the Sunshine is beginning to add its regular quota to the state's output of gold, and the Sacramento, the Annie Laurie again next week. The Annie Laurie

of Gold Mountain is turning out big money, and before long, it is said, the Madsen company will install a mill also. The drift has entered the main, and Stettin's one bonanza, the Johnny, has let the contract for its mill. The Century is just getting down to business at its new mill, and the balance of the year promises much in the way of increased gold production. The settlements of the week, as reported through the banking house of Cornick & Co., amounted to the sum of \$45,200, as compared with \$446,500 the week previous, an increase of \$185,400. Yesterday's settlements amounted to \$64,000, divided as follows: Silver, lead, gold and copper ores, \$57,000; case bullion, \$7,000.

FULL BREAST OF FINE ORE.

Developments in Tetro Are of a Most Encouraging Nature.

Most encouraging reports continue to come from Superintendent Brown of the Tetro mine, in drifting west from the bottom of the incline on Friday a large cave was encountered, but it interfered in no way with the quality of the ore being developed. When yesterday's report was received it contained statement to the effect that the drift had been extended over twenty feet west from the bottom of the incline, that it had gone through fine clean ore to that distance, four sample assays revealing the average of 30 per cent lead, forty-four ounce silver and \$1.20 in gold per ton. The width of the vein had not been tested when the news came in, but it was just as strong on top, bottom and sides as it was in the face. The inference is that it is a pay chute of no small dimensions. Just to show that the ore is not streaky or hungry looking, Superintendent Brown declared his intention yesterday of sending in a chunk weighing 200 pounds or so. It should reach Manager Pollock's office early in the week, though it will be shipped by freight.

ANOTHER GOLD DISCOVERY.

Ore Carrying \$14 a Ton Found in Little Willow Canyon.

The operations on the Dipper mine at the mouth of Little Cottonwood canyon has caused some prospecting to be done by two, and at least one discovery has been made in consequence. Charles Wengren, an employe of the T. & B. sampling works, is the latest in new ground. He, with others, has been doing some prospecting in what is known as Little Willow canyon, this side of Little Cottonwood, and a day or two ago his partners sent down some rock to be assayed and called for additional supplies, that they might continue work.

The ore received came from just below the grass roots, and gave returns of \$14 per ton in gold. After getting the ore, Mr. Wengren got the stuff ordered by his associates, and yesterday afternoon pulled out for camp. The details of the new find were very meager, but Mr. Wengren said it would be north of and higher up in the hills than the Dipper ground.

NEW SMELTER IN COMMISSION.

First Blast Furnace Will Be Blown in Tomorrow.

The \$1,000,000 smelter of the American Smelting & Refining company will go into actual commission tomorrow, when the first blast furnace will be blown in. The great plant is equipped with eight of these furnaces, each capable of consuming 125 tons of ore per day. It will likely be a week or two till the second furnace is fired up, and the balance will be brought into use gradually. In the meantime, the old Germania smelter, which has been in commission for many years, will continue to do service till the capacity of the new plant has been attained—probably the greater portion of this year. What will happen to the old plant, Assistant Manager Smith says, has not yet been decided, but that it will be converted to some use—probably a pyrite copper or a zinc plant—seems most probable.

Metal Market.

Silver, 52 1/2c per ounce; New York, 52 1/2c; London, 52 1/2c. Copper, 11 1/2c per pound; New York, 11.50@12.00; London, 11.50@12.00.

WEEK IN MINING STOCKS.

Holdings of Shares Not Selling—Market Not Discouraging. While business on the mining exchange has been very quiet during the past week, it has been due chiefly to the fact that shareholders were unwilling to sell. Bids are recorded at every session for quite a number of stocks that only occasionally respond. This condition of the market seems to indicate that the period of forced selling is at an end and that better prices will have to prevail before the holder can be induced to part with his wares.

In order that business can be done, there must necessarily be some little fluctuation in the market, and because so few stocks have moved in either direction during the week, no incentive has been given to the talent to place his money. This condition is claimed by the firm to be indicative of a lively season later, and while it will be hard picking for the broker in the meantime, no one feels at all discouraged or fearful of the future.

Several carloads of Tetro shares only were sold, and, for the first time in many months, the value of the week's trading was kept under the \$100,000 mark, the total for the six days being \$90,000. Yesterday's single call and open board session brought out 25,539 shares that sold for \$5,785.87, with Carisa and Tetro as the chief performers.

With the exception of Daly-West, Yankee Consolidated, Tetro and Ajax, none of the stocks have suffered declines worthy of note, and in the case of the two latter the sagging has been caused more through lack of business than anything else. Daly-West has been through the bears all week. Monday it closed on sales the lowest of which was \$45.25. Yesterday's only sale was made at \$43.90, a loss of \$1.35 per share during the five days. It has been caused, apparently, by the extravagant stories circulated by the brokers to the effect that the company was going to pay \$400,000 for the Little Bell. When asked how soon such a transaction would be concluded, Simon Bamberger, the chief man in the Little Bell company, promptly replied, "Never."

May Day has gone down from 2 1/2 to 1 1/2c bid, and Yankee Consolidated closes with sales at \$115, as against \$121 on Monday last. On Monday, the good reports coming from the mine, has moved up the past day or two from 5 1/2c to 9c, and closes the week with 9 1/2c demanded.

Century, that was selling as low as 2 1/2c on Monday, commanded 20 1/2c yesterday, while California, with its reorganization scheme about concluded and a prospect of stiff assessments starting it in the face, has moved up 1c to 12 1/2c.

SUMMER FROLIC.

Get Ready Now. Give the brain and body food during the summer that does not overtax the stomach and heat the body.

Grape-Nuts is a crisp, dainty and delicious food, selected parts of the grain treated by heat, moisture and time to slowly and perfectly develop the diastase from the grain and transform the starch into grape sugar in the most perfect manner; the small particles of phosphate of potassium found in certain parts of the cereals are retained and these elements vitalize and nourish the body, brain and nerve centers. In its undigested form it furnishes the necessary strength and energy in an easy way for the system to absorb without undue exertion and removes the general feeling of heaviness usually to be had. Grape-Nuts and cream, a little fruit and possibly an egg or two cooked to suit the taste, is an ideal breakfast, and will fully sustain the body until the noonday meal. Delicious desserts for luncheon and supper can be quickly made and have a flavor all their own from the peculiar, mild but satisfying sweet of the grape sugar. Grape-Nuts and cream, a little fruit and possibly an egg or two cooked to suit the taste, is an ideal breakfast, and will fully sustain the body until the noonday meal. Delicious desserts for luncheon and supper can be quickly made and have a flavor all their own from the peculiar, mild but satisfying sweet of the grape sugar. Delicious desserts for luncheon and supper can be quickly made and have a flavor all their own from the peculiar, mild but satisfying sweet of the grape sugar.

of the Bingham company's great empire of territory is opening through the long tunnel, however, and in the meantime the ores with which to feed the furnaces of the smelter come from Cummins workings and the Dalton & Lark shaft.

Walter James, the well known mining and stock man of Black Rock, was summoned to the bedside of his father yesterday. The old gentleman has just suffered a stroke of paralysis. His home is at Black Rock.

J. J. Evans and Willie D. Thompson left yesterday afternoon for Lake Blanche, at the head of Big Cottonwood canyon, in the vicinity of which they will inspect a gold property to which their attention has been directed. Manager Farnsworth of the Bullion-Beck state yesterday that should the Uncle Sam company decide to put in a concentrator, he had no doubt that he could supply them with water on satisfactory terms. No action was taken yesterday.

Since the roads opened early in May the Rocco-Homestake company, according to a report just received from Secretary Smith, has marketed fourteen lots of ore, of one lot each. Fourteen teams are now employed regularly in hauling to the railroad.

WANTED.

Amalgamators for free gold milling plant. References required. Address P. O. Box 1025, City.

Harriet L. Harris, 415 D. F. Walker Bldg. All stenographic work promptly executed.

J. Oberndorfer, Stock Broker, 161 South Main. Tel. 238. Home, 1064-Y.

Meyer & Joseph, Stock Brokers, 502 Progress Building. Phone 1189Y.

CUTTING TRUMBO DOWN.

Receiver of Golden Cross Mine Suffers Heavy Disallowances.

According to a press dispatch in today's San Francisco Call from San Diego, Colonel Isaac Trumbo is meeting with continued opposition in securing the allowance of his financial report as receiver of the Golden Cross mine. The call account states: "San Diego, June 21.—In the superior court this afternoon Colonel Isaac Trumbo was on the grill, undergoing examination as to the correctness of his financial report as receiver of the Golden Cross mine. Trumbo had been obliged several times during the day to hear the intimation of the court that if it were shown that there had been any misappropriation of the funds, the receiver would have to make the amount good or be punished for contempt of court."

There were many expenditures noted on the account as "cash and check" which Trumbo is being called upon to explain, and at the rate of progress made this afternoon, it is likely that they will not all be explained before the end of the week. Judge Conroy ruled today that creditors of the company who had received their orders from Receiver Trumbo and had delivered at the mine the goods ordered had a lien against the mine. That gives their attorney a standing in court.

"This does not include the bill of Murphy, Grant & Co. of San Francisco for \$500 for goods delivered at the mine. The bill is being called upon to explain, and at the rate of progress made this afternoon, it is likely that they will not all be explained before the end of the week. Judge Conroy ruled today that creditors of the company who had received their orders from Receiver Trumbo and had delivered at the mine the goods ordered had a lien against the mine. That gives their attorney a standing in court."

The attorneys for the mine announce an intention to go further into the details and see what became of certain property after it was delivered at the mine—particularly that which they claim does not seem to have been used for the mine.

A San Diego Union publishes a column story of the court proceeding, and tells of the disallowance of claims of the receiver aggregating \$100,000, which makes the total disallowances \$1,800,000. The disallowances consisted chiefly of items of money borrowed without authority of the court.

Catarah Can Not Be Cured.

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarah is a blood or constitutional disease, and in order to cure it you must take internal remedies. Hall's Catarah has been taken internally and acts directly on the blood and mucous surfaces. Hall's Catarah Cure is not a quack medicine. It was prescribed by one of the best physicians in this country for years, and is a regular prescription. It is composed of the best known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing Catarah. Send for testimonials. Free.

SWAMP LANDS FOR CATTLE.

Valueless Land in South May Be Used For Grazing Purposes. Chicago, June 21.—Plans that were first taken into consideration about a year ago have been developed in the last few months of the point where some of the great packers of establishments in Chicago have begun experiments on what may prove a revolution of the cattle industry of the country, says the Intelligencer.

The project involves the settlement of a butte, three thousand acres of which is at present nearly valueless land in northern and northwestern Florida and a large section of the cassava root and its use in feeding cattle and hogs. If the plan develops as it is now in the minds of the leading packers, the southern states will become the center of the cattle raising industry.

It is stated that arrangements are now being made for the accommodation of a considerable number of cattle to be shipped from the stock yards here to northern Florida, to be fed on a large scale of the cassava root and its use in feeding cattle and hogs. If the plan develops as it is now in the minds of the leading packers, the southern states will become the center of the cattle raising industry.

His Condition Explained. (Chicago Post.) "Didn't you get very well?" she asked as he reached home on a rainy evening. "I got so wet that it made me dry," he answered, feeling that he ought to give some excuse.

Interesting to Asthma Sufferers. Daniel Bante of Ottumwa, Iowa, writes: "I have had asthma for three or four years, and have tried about all the cough and asthma cures in the market, and have received treatment from physicians in New York City, but got very little benefit until I tried Foley's Honey and Tar, which gave me immediate relief, and I will never be without it in my house. I sincerely recommend it to all." Johnson, Pratt & Co.

RHEUMATISM Almost as Common in Summer as in Winter

When the blood is charged with Uric Acid and other inflammatory matter, and muscles and joints, tissues and nerves having become saturated with it, an attack of Rheumatism is liable to come at anytime, and from very slight causes—sudden chilling of the body when over-heated, exposure to night air, a fit of indigestion, an easterly wind, or any sudden change in the weather will stir the blood and set in motion these demon forces as quickly as the cold, piercing winds of winter.

The real cause of Rheumatism is a polluted, sour and acid condition of the blood, and as it flows through the body it deposits a gritty, irritating substance or sediment in the muscles, joints and nerves, and it is these that produce the terrible pains, inflammation and swelling, and the misery and torture of acute Rheumatism. No other disease causes such pain, such widespread suffering as Rheumatism. It deforms and cripples its thousands, leaving them helpless and miserable. When neglected or improperly treated, Rheumatism becomes chronic; the pains are wandering or shifting from one place to another, sometimes sharp and cutting, again dull and aggravating. The muscles of the neck, shoulders and back, the joints of the knees, ankles and wrists, are most often the seat of pain. Countless liniments are rubbed upon the affected parts, and plasters are applied to get relief, but such things do not reach the poisoned blood; their effect is only temporary; they are neither curative nor preventive. The blood must be purified, the acid poison counteracted, and all irritating matter removed from the circulation before permanent relief and a thorough cure is effected, and no remedy does this so certainly and so quickly as S. S. S. It contains not only purifying and tonic properties, but solvent qualities as well, all these being necessary in eradicating the poison and making a complete and lasting cure of Rheumatism. S. S. S. cleanses the blood, and under its tonic effect the nervous system regains its normal tone and the appetite and digestion improve, resulting in the upbuilding of the general health, and because of its solvent properties all irritating matter and acid particles are dissolved and filtered out of the system, thus relieving the muscles and joints of any description, but is guaranteed purely vegetable. Old people will find it not only the best blood purifier, but a most invigorating tonic. Just such a remedy as they need to enrich the blood and quicken the circulation.

Whether you have Rheumatism in the acute or chronic stage, the treatment must be internal, deep and thorough in order to be lasting. Never be satisfied with anything less than an absolutely perfect cure. This you can get by the use of S. S. S. Write us fully and freely about your case, and medical advice will be given without charge, and our special book on Rheumatism will be mailed free to all desiring it. THE SWIFT SPECIFIC CO., ATLANTA, GA.

THREE TONS OF MONEY.

Silver Sent to Porto Rico—Native Send All Paper Currency Away.

New York, June 21.—About three tons of silver coin of the United States will be shipped from this city today for Porto Rico, in payment for bonds just purchased by a banking house with branches in that island.

Heretofore, when bills and bank notes were shipped to the island they disappeared very rapidly. For some time the disappearance of paper money was a mystery. Finally it was discovered that the people of Porto Rico were just beginning to find it handy to send paper currency through the mails, and especially when it was desired to send small amounts out of the island. In this way the currency supply was being depleted constantly, and the bankers determined to try silver coin, in the belief that it will take a good deal in postage to send it all out of the country in letters and may discourage the practice.

During the summer kidney irregularities are often caused by excessive drinking or being overheated. Attend to the kidneys at once by using Foley's Kidney Cure, Johnson, Pratt & Co.

SUNDAY CONCERT

— AND — Mrs. Elsie Barrows Best

— IN A — POPULAR PROGRAMME.

25c All Over. A. S. ZIMMERMAN, Manager.

STREET OXFORDS

with medium and heavy soles are the most comfortable. They prevent the hot pavements from burning your feet. The money back kind here in great variety—new shapes and kinds are constantly coming in.

Low Prices prevail in every department here. When you see our \$3.99 kinds it's like looking at the \$1.00 and \$2.00 sorts elsewhere.

It is stated that arrangements are now being made for the accommodation of a considerable number of cattle to be shipped from the stock yards here to northern Florida, to be fed on a large scale of the cassava root and its use in feeding cattle and hogs. If the plan develops as it is now in the minds of the leading packers, the southern states will become the center of the cattle raising industry.

His Condition Explained. (Chicago Post.) "Didn't you get very well?" she asked as he reached home on a rainy evening. "I got so wet that it made me dry," he answered, feeling that he ought to give some excuse.

Interesting to Asthma Sufferers. Daniel Bante of Ottumwa, Iowa, writes: "I have had asthma for three or four years, and have tried about all the cough and asthma cures in the market, and have received treatment from physicians in New York City, but got very little benefit until I tried Foley's Honey and Tar, which gave me immediate relief, and I will never be without it in my house. I sincerely recommend it to all." Johnson, Pratt & Co.

New Management. A clean, wholesome Vandeville Entertainment each night in the Beautiful, Historical Salt Palace. Two acts. The best that can be secured. Chester, The Wonderful and Amazing Equilibrist, A Roaring Farce.
