

### CARISA'S NEW MANAGEMENT

#### Shareholders Meet and Elect an Entirely New Board.

#### COMSTOCK TO BUILD A MILL

#### THE MINE IN SHAPE TO SUPPLY THE ORE.

The shareholders of the Carisa Mining company met in annual session yesterday and elected one of the strongest boards of directors that has been named by any mining company in the state for many a day. It is composed, from top to bottom, of heavy shareholders in the company and the unanimity of their selection was an expression of the confidence reposed in them by the stockholders represented, and 236,000 votes were cast. Last night the new board met and organized and this evening they will go out to the mine and look over the proposition with a view to deciding, in a general way, what line of operation shall be followed in the future.

The new board, as finally organized, is as follows: John S. Bradford, president; H. S. Joseph, vice president and managing director; Frank J. Westcott, treasurer; and Joseph E. Gallagher and Dr. E. D. Woodruff, comprising the board. The predecessors were Clarence K. McCormick, president; H. G. Heffron, vice president; J. S. Gard, secretary and treasurer; George Sutherland (who never qualified) and Duncan McViechie.

There has been a determination on the part of the shareholders to have a complete change of management for a long time past and the large attendance at that meeting was evidence of the fact that they intended their determination should be made good. It developed at the meeting that C. K. McCormick was about the only member of the old board that held any stock in the corporation, to speak of, and the stockholders were evidently well pleased that they had been relieved of seeing the property managed by men who had no personal interest in it.

After submitting his report and verbally explaining some matters which it did not include, the new board, headed by Mr. Bradford, asked that action be taken on his resignation, which had been tendered a month or so previous. It was later accepted by the new board, though with honest expressions of regret, as every member felt and knew that they were losing a most efficient and capable man. He will be succeeded by David E. Williams, who was appointed to audit the books and accounts of the old management, and until they report some day during the week, the exact status of the company's affairs will not be known. The report submitted at the stockholders' meeting lacked much of detail and failed to show anything concerning the disbursements of the year, except as they related to the cost, transportation, treatment and assaying of the ores marketed. The committee named to make the report was J. H. Brown, Charles F. Keith and H. V. McLean, the latter an expert accountant of recognized ability.

The report submitted merely showed that during the year the total gross receipts from the sale of ores and from all other sources was \$237,970.72. The gross amount of ore produced, including leasers' lots, was 11,736 tons, and net, 11,174 tons. After deducting freight, treatment and other charges, and settling with leasers, the total revenue to the company was shown to be \$177,208.99. It also showed that the ore sold netted the company \$14.90 per ton.

#### SAM NEWHOUSE'S LATEST BUY.

He Has Joined E. F. Freudenthal in Two Properties Beyond Pioche.

On his arrival from Pioche yesterday, Ed F. Freudenthal, the well known operator, for the time admitted that Samuel Newhouse had purchased a half interest in two groups of claims owned by him in the Comet district, twenty-two miles west of Pioche. The consideration Mr. Freudenthal declined to state, but he did say that the transaction was closed on the first day of the present month, since which time a force of men had been employed on development work at two different points on the property with most gratifying results. On one claim a shaft had been put down to a depth of 150 feet, while farther along the same ledge another shaft had been sunk fifty feet. Work was resumed in the latter and when Mr. Freudenthal left there was exposed seven feet of the richest kind of gold-silver-lead-bearing ore in a twelve foot vein, every pound of which will pay handsomely to ship.

On another claim in the second group, two miles to the north of the one mentioned, a new shaft has been started and from the bottom ore is now being taken out that Mr. Freudenthal says will run \$9 gold, 135 ounces silver and 35 per cent lead per ton. Both properties, he says, are opening up splendidly and he is banking on both of them making big producers.

At the Manhattan property he says good ore is being taken out, but shipments will be delayed until teams are easier to obtain. He reports that the main ore chute in the E. & F. company's property has been tapped and the mine is showing up big. He brought up a lot of samples from the E. & F. strike that he calculates will show to carry 100 ounces silver and 35 per cent copper. He expects to produce the assay certificates to prove it tomorrow or next day.

#### BOSTON CON. IMPROVEMENTS.

Hotel With Many Conveniences Is Being Completed at the Mines.

Manager M. M. Johnson yesterday, "was planned with the idea of giving the men just as good and even better accommodations than they could find at any other hotel or stopping place in the camp, or in any camp in the state, for that matter. The accommodations include, aside from the commodious dining room, cellar and kitchen, a good reading room or library, a warm and comfortable changing room, a nice bath room and twenty-eight sleeping apartments, \$210 feet each. These rooms will accommodate two persons each and will be a great improvement over the old-fashioned and oftentimes filthy bunk houses found at altogether too many mines in the west."

Manager Johnson is a stickler for good men and he is man enough himself not to expect good men to stay and give good service to a company unless they are given the treatment white men are entitled to. He has, therefore, taken the pains in building and equipping that fact and always comfort and convenience that the character of the work and the surroundings would permit of being carried out. He is more than confident that miners appreciate that fact and always have a warm spot in their hearts for the management of the company which made it possible for such accommodations to be placed at their disposal.

#### IMMENSE COAL DEPOSITS.

Kimberley-Buhl Syndicate Landing 25,000 Acres in Emery County.

Price, Utah, Aug. 30.—The necessary papers and maps showing surveys for 25,000 acres of coal lands in Huntington canyon, in Emery county, have been sent to the state board of land commissioners at Salt Lake City. The owners are all Emery county people, and the coal is being taken up in the interest of the Kimberley-Buhl syndicate of Sharon, Pa.

When the big iron deposits down near Cedar City pass to the control of this crowd, the people interested will have to have coking coal to work the mines, or, rather, manufacture the product, and it is with this idea in view that the Huntington canyon holdings are being acquired by the syndicate.

The coal deal is being put through by Don C. Robbins, who has been interested there for several years, and who has disposed of for other parties numerous other tracts to P. J. Quayle and the Union Pacific interests. The Utah Fuel company and the Pleasant Valley Coal company people also have large holdings in the same section of country, which will be easily tapped when the cut-off is finally finished by the Rio Grande system through to a connection with the main line at Mounds or at Green River station.

There is also considerable talk of the Rio Grande Western opening another mine in Spring canyon, south of the

Castle Gate mines, where large bodies of fine coal may be easily worked, and power for which is easily supplied from Castle Gate by running the electric system over the hills a couple of miles. The same thing may be done in another canyon, Willow Creek, which is also near Castle Gate, and to the east and north.

#### LONG TUNNEL FOR CACTUS.

Will Connect Mine With Mill and Townsite a Mile Below.

Respecting the big undertakings planned for the future at the Cactus bonanza in Beaver county, the Beaver News says:

"Word comes from Copper gulch to the effect that preparations are under way for the inauguration of work upon the immense tunnel planned by Samuel Newhouse to afford an outlet for one of the Cactus mines. The mouth of this tunnel will be down toward the site of the proposed concentrator and townsite, in Wah Wah valley, and it will be a mile in length, opening the vein at a depth of 700 feet below the collar of the present shaft. This shaft is now down nearly 600 feet and 100 feet more will take it to the tunnel level. As the bore will be large enough for a double track and a mile in length, it is one of the biggest tunnel propositions in the state, but it is quite in keeping with the general plan of Cactus development.

"Over a million tons of ore are now blocked out in the mine and probably by the time the tunnel is completed the concentrating plant will be ready for operation with an abundant supply of water piped nine miles across the valley from Wah Wah springs. It is stated that Mr. Newhouse pays \$70,000 for these springs alone. The initial capacity of the concentrator will be 500 tons, but the intention will be to enlarge it to 1,000 tons. It is understood that the Frisco branch of the Oregon Short Line will be extended around the mountain, so that the mill product can be loaded right on the cars, but whether it will be sent to Salt Lake or to a smelter at Milford has not been announced.

#### COMSTOCK TO BUILD A MILL.

Ground Has Already Been Broken—Plenty of Ore.

The Comstock Mining company has definitely decided to erect a new mill of fifty tons capacity to handle the ore from that property, and Superintendent Hickey, who came down from camp Friday night, stated yesterday that preliminary work at the site se-

lected was commenced the day before he left. The grading will all be completed in a few days and with the arrival of lumber on the ground, active construction will begin. Orders for the material are now being placed, and sixty days hence the plant should also be ready to be about ready to go into commission.

No splurge has ever been made over developments in the mine, but there is no question in the world that it contains large amounts of the finest milling ore imaginable, and once the plant is in operation money will be made at a rapid rate. Superintendent Hickey says the drift on the 300 level is showing up better and bigger every day and he is now prepared to extract almost any kind of a tonnage desired. At this point in the mine where the raise was made to connect the 300 with the tunnel level, ore was encountered all the way and at the several places where drifts were run and started, considerable first-class shipping ore and large bodies of milling ore were exposed and opened.

This part of the workings has been perfectly timbered and with the placing of chutes everything will be in readiness for stopping. It has cost lots of money to bring the Comstock to a producing stage of development, and the management and Superintendent Hickey are to be congratulated that their efforts have been so successful.

#### KAOLIN DEPOSIT SOLD.

Property in Cedar Valley Changes Hands—After Idaho Opals.

Provo, Aug. 30.—A mining deed from Eli Kendall of Lehi to Fred Merrill of Lehi, conveying an undivided one-fourth interest, formerly owned by D. S. Hitesman, in a kaolin or clay bed situated in the south end of Cedar valley, for a consideration of \$1,000, has been filed with the county recorder. St. V. Le Sieur expects to leave for Idaho next week for the purpose of developing some fine deposits of opal which he discovered on his trip to Thunder mountain this spring and which his illness prevented him from working. Mr. Le Sieur brought some specimens with him which are very beautiful, and he thinks there are large quantities of the stone in the place where he secured his specimens.

#### ALBION WORKINGS CONNECTED.

Manager Hatfield Promises Substantial Results Before Season Ends.

Manager William Hatfield came down from the Albion company's property at Alta Friday night, after having seen the new tunnel workings connected with the old portion of the mine. He stated yesterday that everything is now in shape to go on with development work and he promised that before the season closes he would make the property talk in a substantial manner. The new power drill

will witness the greatest kind of activity all along the line.

#### EUREKA-OPHIR CONSOLIDATED.

Pennsylvanians Organize to Operate Property at Ophir.

Articles of incorporation were filed with the county clerk yesterday of the Eureka-Ophir Consolidated Mining company, with offices in this city. Business and transfer offices will be established, however, in Warren, Pa. The company has a total stock of \$300,000, divided into that number of shares of the par value of \$1 each. The incorporators have turned over to the corporation, and the company has accepted in full payment, the entire capital stock of the Osceola mining claim, the Mona mining claim, both of which are situated in the Ophir mining district in Eureka county, also a lease and bond on the Eureka lode mining claim in the Ophir district.

The incorporators are A. T. Stanford, D. Harrington, H. P. Stone, Warren, Pa.; W. K. Stone, Corry, Pa.; M. D. Stone, Jamestown, N. Y.; T. E. Cook, Warren, Pa.; W. K. Stone, T. E. Cook, vice president; H. P. Stone, secretary and treasurer; these, together with John W. Cairns, H. A. Stone, M. D. Stone, A. T. Stanford, E. E. Allen and D. Harrington, constitute the board of directors.

#### ANOTHER PARK CITY COMPANY.

The New York Group Will Be Operated by It.

The well known New York group of patented claims at Park City will form the basis of a 300,000-share company, to be known as the New York Mining & Development company, during the next few days. The articles are now being drawn in this city and as all arrangements for the launching of the enterprise have been made, operations at the property will begin very soon. The final action to this end was taken in Park City on Friday when R. G. Wilson, president of the group, and John Green's interest in the group, one of two other interests in the mine are yet outstanding, but there is every reason to believe that all will take a hand in the corporation in the near future, either that or their interests will be acquired.

The property is located about 1,000 feet south of the Stevens group, now part of the Wabash holdings. The Nalldriver tunnel has developed a splendid vein right up to the end lines of the New York and there is no doubt a mine will be opened in the latter ground.

#### URANIUM BELOW PRICE.

French Syndicate After Deposit Owned by A. J. Lee and Others.

Price, Utah, Aug. 30.—Arthur J. Lee and others of Price have what is believed to be a body of ore carrying uranium in large quantities down on the San Rafael river, about twelve miles from Green River station, in Emery county. An expert by the name of Morrison from Denver has just concluded a report after an examination and finds it to be of good grade and in paying quantities, that is, so far as work has gone. He is representing a French syndicate which has an expert en route to again report and upon what he says will largely depend the corporation's property. F. O. Richardson and C. M. Glenn of San Francisco have also lately gone over the ground and are anxious to have a hand in its development and promotion.

#### Ore and Bullion.

Ore and bullion settlements in this city during the past week as reported by McCormick & Co. are as follows: Yesterday's proportion of the total being \$18,500, as follows: Silver, lead, gold and copper ores, \$2,000; base bullion, \$2,000; gold bars, \$2,500.

#### Metal Market.

Silver, 82 1/2¢ per ounce.  
Copper, 10 1/2¢ per pound.  
Lead, \$3.50 per 100 pounds.  
No New York quotations—holiday.

#### Mining Notes.

Four cars of Mammoth ore will be on the market tomorrow. The Columbus of Alta contributed one car of ore to yesterday's market. Captain Timothy Egan leaves for Park City this morning on business.

Colonel C. E. Loos, of the Grand Central company was up from Provo yesterday. Three cars of high grade ore from the Eagle & Blue Bell were on the market yesterday.

D. Wood left for a business trip to the northwest yesterday. He will be absent several days. Five carloads of ore from the Uncle Sam Consolidated reached the Conklim sampling works yesterday.

M. M. Miller and Alex Campbell went up to Park Valley yesterday to inspect the Century mine and mill. The Taylor & Brunton sampler was yesterday in receipt of one car of ore from Tintic, four from Bingham and one from Alta.

Messrs. Underwood and Dupue, who are operating a portion of the Sioux-Utah under lease, yesterday had a car of ore on the market. The first car of ore from the Martha's new strike was released from the sampler yesterday, but not in time to get it on the market.

George K. Fischer, the constructing engineer of the United States company, accompanied by Mrs. Fischer, left last evening for a week's outing at Glenwood Springs. Superintendent Harris K. Masars, who returned from his week-end stay last night, will look after matters at the new smelter during Mr. Fischer's absence.

C. C. Hyman of Elko, Nev., who is now making frequent shipments from the old Commonwealth mine, and who has been in the city for a few days, returned home again last night. He says Nevada is awakening from its long sleep with a greater record as a mineral producer than it did in the balmy days of the Comstock.

Manager Jacobs has returned from the Ben Butler, where he recovers another six seven car load of first-class ore being hauled to the depot. The teams started Friday and the consignment should reach the smelter early in the week. About 20 tons of milling ore have also been accumulated since the last run was made, but Manager Jacobs does not expect to touch it until the bins show 500 tons on hand, it being less expensive to make a large run at the mill.

Beaver News: Charles Price, foreman of the Savage mine, was in Beaver the early part of the week and reported everything running smoothly at this majestic property. Five men are at work under a number of leases, and in close contact, where they expect to catch the ore. Mr. Price stated that reports from the Vicksburg indicated that that property was showing up well. A vertical working shaft is to be started and the property owned by the host.

President A. B. Lewis of the Majestic company returned from Beaver county yesterday morning and reported operations on the new smelter inaugurated. He reports that everything is moving swimmingly as all of the company's properties. Buildings are going up where needed, preparations are being made to install new hoists and winter the mines, and the fall and winter months

#### WIRELESS TELEGRAPH PLAN.

London, Aug. 30.—One of the latest wireless telegraph schemes is the proposed installation of a combined light ship and ocean telegraph station a hundred miles west of the Lizard. It is suggested that a vessel, provided with a powerful search-light, projected against the clouds, mark the position of the station at night. The wireless plant is to be powerful enough to command the fair way of the channel and exchange news and orders with passenger vessels. Should the experiment succeed, it is proposed to establish a number of such ships along the coast. It is thought that they will be particularly valuable in the transmission of meteorological reports and warnings.
