## MYSTERY ABOUT UNION PACIFIC

### Wall Street Speculators Kept Busy Guessing.

### BUYING UP ATCHISON SHARES

### INFLUENTIAL VOTE IS THERE- BY ASSURED.

New York, Sept. 24.—Busy surmise which has been seeking for an explanation of the persistent strength of Union Pacific lighted today on an alleged purchase by the Union Pacific interests of several hundred thousand shares of Atchison, thus insuring it an influential voice in Atchison affairs and strengthening its control of the whole transcontinental road situation. It must be said for this rumor that there was better authority for the credence attached to it than for some of the many others and the sagging tendency of the stock on the report did not shake the faith of its believers. The heaviness of Union Pacific was attributed to profit taking by the speculators who had followed the movement, and as a clue showed no signs of precipitation. The most decided effect was caused to the Atchison, which was bought for strength advance, especially the preferred, which was unusually active. The United States Steel stocks also developed some strength without special news. The details of the August exports showed some very heavy declines in values for iron and steel compared with July, but the buyers of the steel claimed to have encouraging advances of progress in the revival in the trade.

The general list was decidedly neglected and moved marginally, but sympathy with the special strong stocks. The bank statement offered no doubtful speculations and loan contraction was not unexpected, but it was not as large as was hoped for, and was not sufficient to prevent a further substantial depletion of the surplus reserve. Transfer of loans from banks to trust companies is known to have been made to a large extent which is a move that does not affect the actual volume of credits nor the ultimate reserve obligations upon the New York banks. The market closed slightly irregular, with a few fresh advances just at the last. Total sales of bonds, par value, \$2,586,000.

### Review of the Week.

Misgivings over the stability of the price level of stocks has been more or less in evidence all the week. This has prompted some profit taking by doubtful speculators and has encouraged the formation of a bear party which makes occasional attacks on the market and is watchful for opportunities to put out short to advantage. It is still evident that an aggressive bull party is operating which effects reverses to the bear, causing an irregular tone in the market when the bears retreat and cover their shorts. The prevailing tendency of trading also shows a decline in speculative interest. A doubt exists in the question whether the rise in prices of stocks has not been raised sufficient to meet the improvement in conditions which it set out to anticipate. It is perceived that part of the improvement was not realized and some unfavorable developments have been taken into account. As the period for the maturity of the crops approaches, speculative attention is concentrated on the outcome, the nearer so as the final stages of their maturity are recognized as the most critical in reviewing the course of the late rise in stocks it is easily recognized that the crop prospects on which it was initiated have been materially modified. Several estimates of all three of the leading crops, wheat, corn and cotton, have had to be made, and in the cases of corn and cotton the process is still going on. The estimates of the corn crop generally accepted in Wall street this week are based on a yield of about 2,000,000,000 bushels, or below, with the corroboratory testimony of authorities on whom the financial world places high value. This, compared with an earlier estimate of 2,500,000,000 bushels, and a feeling of some hesitancy is conceivable on the part of those who bought stocks on the basis of that expectation. The doubts are reinforced by the fact that the argument that stock prices have been carried to a level warranted by the earlier estimate rather than by the later. The means by which the rise in prices has been effected have also come in for their share of suspicion. The fact is impressed by a process of retrospection that rumors and assertions has been made the basis of enormous buying of stocks and wide advances in their price for days and even weeks, and then thrown aside and forgotten without being realized. Expected dividend increases, great combinations and absorptions of railroad systems and alleged contests for control in the open market have been made to give speculative excitement continuously and then relegated to the obscurity of unwarranted rumors without material after effect on the prices which they had served to enhance.

### Revival in Steel Trade.

The extent of the revival in the iron and steel trade is a matter of contention and discussion and dispute in the Wall street district. The effect of the week's cut in steel bills, although long foreseen, was held, as was the case with the week's trade authorities that previous cuts in other forms had induced but a moderate response from customers. The week's principal rumors centered about Union Pacific, but they proved so ambiguous and contradictory as to impair their influence and were dropped out of consideration. The withdrawal of funds from New York by the interior was continued, and the estimate of an unlimited sufficiency of the banking surplus have been revived, influenced by the rapid rate of discount of the previous weeks. Interest rates are still on a very moderate basis and the rapid decline in foreign exchange has indicated that relief by gold imports might be had in case of any urgent need. But the rising course of loans has had a deterrent effect on speculation. The incoming reports to the controller of the Sept. 6 condition of national banks throughout the country disclose a state of reserves in the south and west that offers no prospect of less than a normal call upon New York for autumn requirements. The reduced demand for money at the stock exchange, prompted by the percentage of the week, is believed to be the cause for the slightly easier tone of the money market in the middle of the week. Reports of railroad earnings and of the general business have been regarded as satisfactory, but have lacked influence on stocks, owing to the agreement with expectations which had induced previous operations in stocks. The bond market has been irregular and somewhat less active. United States 4s and the old 4s regular have advanced 1/4, the 3s 1/2 and the old 3s coupon, 1/2 per cent on call during the week.

### GRAIN AND PROVISIONS.

Chicago, Sept. 24.—Failure of foreign grain markets to respond to the sharp advance here yesterday caused considerable liquidation in the wheat pit here when trading began. Sentiment is quite weak. Initial quotations on December were off 3/8 to 1/2, at 1 1/2 to 1 3/4. May was a shade higher to 5/8, lower at 1 1/4 to 1 1/2. Shorts took advantage of the break and covered freely, bringing up prices to last night's closing figures. The advance was not held, however, renewed profit taking and a moderate reaction. In addition there was some selling on a denial of the rumor that the French government contemplated reducing the import duty on wheat. A report of the Canadian Pacific also had a depressing influence. According to that official the crop damage stories regarding the situation in the Canadian northwest were grossly exaggerated. Toward the latter part of the session sentiment suddenly veered to the bull side, an unconfirmed rumor of possible complications in the war situation involving Great Britain and Russia caused active covering by shorts. Offerings at the time were light. December selling up to 1 1/4 to 1 1/2. May rallied to 1 1/4 to 1 1/2. Advance of nearly 3 cents in the price of the December wheat, and a decline in the export sales there of cash wheat of 1 1/2

a bushel had considerable effect on speculative trading here. Reports of good bear sales in the northwest also were an additional bull factor. During the last hour most of the gain was lost, renewed profit taking causing a decline of over 1/2 cent. The close, however, was firm, with December 3/8 higher at 1 1/4 to 1 1/2. Final quotations on May were 1/2 up at 1 1/4 to 1 1/2.

Corn was weak early but became decidedly strong late in the day on a bullish report of a well known crop expert making a still further reduction in the total yield. December closed 1/2 higher at 3 1/2 to 3 3/4.

Oats followed corn. December closed at 3 1/4, a gain of 1/4. The feature of trading in provisions was in the changing from October to January products. Small receipts of hogs and higher prices at the yards had a strengthening influence. At the close January pork was up 1/8 to 1/2, and lard and ribs each up 7/8.

The leading futures traded as follows:

WHEAT—No. 2				
	Open	High	Low	Close
Sept. 11 1/2	11 1/2	11 3/4	11 1/2	11 1/2
