RUSH FOR GOLD SOUTH OF FAY

Rich Rock in Place Is Discovered in the Klondike District.

STAMPEDE REPORTED ON NEW CAMP CLOSE TO UTAH LINE ON SAN PEDRO.

A special from The Herald's correspondent at Modena, just this side of the Nevada state line, in Iron county, and on the San Pedro railroad, brings the information that a great strike has been made in the Klondike district, and that Monday the town of Fay was practically deserted. The report which reached Modena was to the effect that C. A. Short and J. V. Lane had found Rich Rock in place that stampegrounding in the yellow metal and some men as the news reached Fay, a few miles north of the district, a stampede set in and the report is that a great deal of stampegrounding has been done in the country surrounding the point where the strike was made. It is believed that at least a spur or feeder of the mother lode has been found and, should this prove to be the case, that portion of Nevada will soon be thronged with treasure-seekers, owing to the district's accessibility and easy distance from the San Pedro railroad.

For more than a year past the Klondike district has received careful attention in the country and some men as Ed. P. Frensdorff, A. B. Lewis, the men from Fay mentioned above, and others. Great boulders and float of excessive richness, as well as some of all over that country, but up to the present time not a suspicion of a ledge was to be found. Teams have been hired in the country and some men as hearing boulders and rocks have been thrown into the water, hauled off, broken up with sledges, sorted and shipped to the smelters of this valley and big money has been received from the sale of the rock.

If the vein or a feeder from it has finally been discovered by Messrs. Short and Lane, as the word from the south indicates, the prediction of Mr. Frensdorff, made a couple of years ago, that one of the biggest gold districts in the country would some day be opened in the section named, will more than likely be verified.

Some of the float found down there by the men from Fay, and some of the men shown in A. B. Lewis' office here more than a year ago, samples that were brought up by Messrs. Lewis and Frensdorff, and which they claimed to be from the yellow metal. The reason that they made no splash over it then was that no ledge had been discovered and they were in other sections also provided the idea of locating the real source of the rich float. They have had men in the field ever since.

Snake River Gold Bars.

Geological Survey Official Takes Samples.

Victor C. Heikes, in charge of the field work for the geological survey in Utah, with headquarters in this city, returned from a ten days' trip to Idaho yesterday morning in behalf of the mineral division of the survey. Mr. Heikes has been making an investigation of the Snake river placers and some other placer sections also provided the idea of locating the real source of the rich float. They have had men in the field ever since.

U. S. Office Changes.

Chief Clerk and Assistant Make Room For New Men.

There has been a little shuffling up in the clerical forces of the office of the United States Mining company, and according to the whisperings heard, changes in higher positions are to be made in the not distant future. Chief Clerk C. J. Cary was relieved on Monday by Thomas Carmichael, who has been on his hands down the stool so long occupied by the late Mr. Fitch.

Los Angeles Outfit in the Steteline District Prospecting.

(Special to The Herald.) Modena, May 2.—Several Los Angeles capitalists, with a full prospecting outfit, including a geological engineer, have been prospecting Rich Mountain at Steteline, having crossed the southern part of Nevada and returned to California. They declare they have found richer paydirt on Rich Mountain than any other place they have visited during the past six months, this being the fourth time they have been searching for the yellow metal in this district. They departed for Pike's Diggins yesterday and will inspect a number of properties there any day. They prefer to remain incognito for the present.

MINING STOCK EXCHANGE.

Market Exhibits Little Else Than Weak Spots.

The market was pretty badly "shot up" yesterday, though the steadying down of New York, after touching 200 and 205, yesterday at the close a little brighter for today.

and down, and would sell on any further advance, with an idea of buying them back cheaper. Quotations: Bingham, 190 1/2; High, 190; Close, 190 1/2; Bost. C., 150 1/2; Bost. S., 150 1/2; Bost.
