

CORRESPONDENCE

HEIST

Heist, Utah, Feb. 4, 1919. The county assessor paid his annual visit last Friday.

Larrie Paddock came home for a visit Sunday. He is employed at the Salt Lake Route.

Messrs. Jones of Enterprise transacted business here recently.

Burkholder Brothers of Lund spent several days at the Heist Ranch.

Frank Hogan returned from Camp Lewis recently, where he had been in training with the 213th Engineers.

George L. Sylvester of Salt Lake City is visiting his sister, Mrs. M. D. Heist.

W. B. Hogan and C. L. Heist, two of our veterans, are expected home from France soon.

Messrs. Heist and Hogan are in Cedar City and Parowan on business.

NEW HARMONY

New Harmony, Utah, Feb. 4, 1919. Clinton and Herbert Milne returned to their home at St. George yesterday after working some two weeks here at their trade of painting and paper-hanging.

Something like a thousand rabbits were killed last Thursday and Friday in the big rabbit hunt. Since the snow came the men and boys are hunting them with dogs and clubs.

Mr. and Mrs. Mason Rencher of Grass Valley were visiting relatives here last week.

Mrs. Leroy Grant came down from the ranch for a few days' visit last week.

Bp. Pace and Albert F. Mathis came in with a bunch of sheep from Newcastle yesterday.

Alvin Kelsey is on the sicklist this week.

Stewart Thorley and Mr. and Mrs. Sam Stueckl of the Thorley ranch were the guests of Mr. and Mrs. J. D. Neilson last Wednesday evening.

Clarence Ingelstead has returned to his work in Hurricane Valley, after visiting with his family for a few days.

MODENA

Modena, Utah, Feb. 2, 1919. Frank Hogan arrived from Camp Lewis last night. He is sure looking fine, and has good things to say about soldier life.

A good many miners were down from State Line Saturday getting their month's supplies. They bring in good reports of the mine.

CAMPUS LABORATORY IS VACCINE FACTORY

More than one hundred thousand doses of Rosenow vaccine, used to vaccinate against influenza-pneumonia, have been made in the State Public Health laboratory at the University of Utah, under the direction of Dr. L. L. Daniels, state bacteriologist.

The vaccine is composed of sixty per cent pneumonia germs, ten per cent staphylococcus aureus pyogenus germs, twenty per cent streptococcus germs and ten per cent Pfeiffer's bacillus of influenza germs. All the germs are obtained from actual cases of influenza-pneumonia. This is thought to increase the potency of the vaccine.

The germs are grown in special media in a laboratory kept at body temperature. Then they are washed in solution of salt water and shaken by an electric shaking device to obtain an even suspension. The organisms are counted, put into test tubes and then killed, either by heat or by the addition of chemicals. They are diluted until each cubic centimeter contains five billion bacteria and then tested for sterility. If found to be sterile, a preservative is added and the vaccine bottled for shipment.

The first dose is one-half cubic centimeter, the second is one cubic centimeter and the third is one and a half cubic centimeters. There is a period of seven days between doses. Rosenow is an anti-pneumonia vaccine. Its value in preventing influenza is said to be undetermined.

A goodly amount of snow has fallen during the larger days, which spells a whole lot for this section. It insures a good crop for next season and makes the outlook for rye and spring wheat look good.

James F. Moen and wife are visiting in Milford a few days.

A couple of industrious gentlemen in an auto that looked like a stripped Dodge had on Judge Laney some time after midnight last Wednesday, and went to get some lubricating oil. The judge gave them some oil, and getting the oil for one of them, the other fellow appropriated for his use one of the cushions belonging to the Judge's car. The same two came Walter Gale from and got some more lubricating oil. They didn't see the oil while at Modena, and their was pounding hard. They acted bold, bad men.

William Lund's wife are over to Enterprise looking after store No. 2.

Sunday School, the school house last Sunday Read Rogers officiating.

SARA

Sahara, h. Feb. 5, 1919. Mrs. H. Hobbs came to live with Mrs. N. Hofer a while bringing the baby Mrs. Cody's two girls to attend school. We have a good attendant school.

Mrs. Hall Griffin has been in Milford the past week having some dental work done, and Mrs. Griffin have accepted plans with Mr. Webb on the rail.

Mrs. Baker was over Sunday.

Mrs. Reynolds been in Modena the past week, and Mrs. Griffin home with her. Griffin has accepted position foreman of the section at Eccles.

Mr. Hoxie has the Club two boxes of oranges lemons from California. We certainly enjoy them as oranges lemons are hard to get up here.

Mrs. Meads returned to Sahara after spending months in Ogden.

Mrs. Corn had fitting bee last week. All the kind of this place were present and it a good time.

Mrs. Charles Mason has been on the sick list few days.

The snowstorm we feel as though we would winter yet. The ground hog didn't see his shadow, however.

The Club met regular session Saturday night, playing and dancing afterwards the recreative features.

We have a new in our school house.

U. OF U. IS ONIROOL TO TEACH S. CUSTOMS

That social course given now for the second at the University of Utah by Torild Arnoldson, is provincial is indicated by the large tent. There are sixty-four students in the class this quarter.

It is believed that the University of Utah is the only school in the country that is attempting in this field. The course deals with principles of courtesy, studies an ethical standpoint.

The purpose of this is to compare different codes and seek the

IMPORTANT HOME GARDEN

Early in Effort to Secure Supply of Vegetables for Table and Canning.

LAYED PLAN GREAT AID

Approximate Quantities of Seed That Should Be Purchased Is Given in Working Space is Important Factor.

By the United States Department of Agriculture. The seed for your home garden is an important step in the gardener's effort to supply fresh vegetables for his table and for canning to help relieve the demand on the country's supplies of food. It should be ordered well in advance of the time for planting in the spring so that it will be ready for planting as soon as the weather and condition of the soil make it possible to order seed the home gardener should decide what vegetables he wants to raise and also when and decide on the best location for each vegetable, determining how much seed will be required for the available space for each variety. A working plan series will be a great aid in determining the amount.

HOW TO GROW BRUSSELS SPROUTS.

Brussels sprouts are closely related to cauliflower, and may be raised in the same manner. They may be started in the window or in the hotbed and transplanted to the garden when the ground is warm.

Insure a single head, Brussels sprouts a large number of small heads being formed in the leaf axils. If the heads are too crowded, the leaves should be broken off so as to give the heads room. However, a few leaves should always be left in the top of the plant where the new heads are formed. Brussels sprouts are milder than cabbage and in many cases may be planted in the fall. They should be set in rows 30 to 36 inches apart if for home cultivation. Plants should be set from 20 to 24 inches apart in the rows.

Brussels sprouts may be stored for winter in much the same way as cabbage. The best method is to take up the plants closely together, covering them with straw or litter to protect them from frost and thawing. U. S. Department of Agriculture.

HOW TO GROW COLLARDS.

The usual uses of collards are the same as for cabbage. The plants should be set in very early spring and set close to the ground in order to withstand the heat better. The plants are much used in the southern portion of the country. Do not form a true head, but a loose rosette of leaves, which, when blanched, are very tender and of delicate flavor.

No southern garden is complete without collards. Too often, however, it has not been the sum total in the garden supplies. Use it, but don't neglect it.—U. S. Department of Agriculture.

HOW TO GROW PARSLEY.

The seeds of parsley should be soaked for a few days before planting to insure germination. They are slow in germination and should be handled very carefully. After one or two transplants should be set in the open ground in rows 12 to 18 inches apart and 4 inches apart in the rows as the soil can be put in condition all area devoted to this crop will be sufficient for the average family.

It is used as a garnish and for flavoring soups. A little of it growing at all times gives a pleasing touch to many dishes.—U. S. Department of Agriculture.

It is understood that the lower grades of the school are to resume work Monday morning.

Underlying principle of true courtesy. Further, an attempt is made to separate the true from the false, the mere veneer from the substance, and to agree upon those things of good breeding which are true considerations in all walks of life and to adopt them as a standard of social conduct. Social traits and usages of civilized nations are noted and compared.

Seed for Garden. Following are the approximate quantities of seed that should be purchased for a garden which is to supply vegetables.

Produce From Backyard Garden.

- Tables for successive plantings throughout the season for a family of four: Beans, snap, 1 to 2 quarts; Beans, pole, Lima, 1 pint; Beans, bush, Lima, 1 pint; Beet, 1 packet; Cabbage (early), 1 packet; Cabbage (late), 1/2 ounce; Carrot, 1 ounce; Cauliflower, 1 packet; Celery, 1 packet; Corn, sweet, 1 to 2 pints; Cucumber, 1 ounce; Eggplant, 1 packet; Kale or Swiss chard, 2 ounces; Lettuce, 1/2 ounce; Melon, 1/2 ounce; Onion sets, 1 to 2 quarts; Parsley, 1 packet; Parsnips, 1/2 ounce; Peas, garden, 1 to 4 quarts; Radish, 1 ounce; Salsify, 1 ounce; Spinach, 1/2 pound in spring and 1/4 pound in fall; Squash (summer), 1 ounce; Squash (Hubbard), 1/2 ounce; Tomatoes, early, 1 packet; Tomatoes, late, 1/2 ounce; Turnip, 1 to 2 ounces; Watermelon, 2 ounces.

Space for Garden. If a gardener should desire to plant all of the vegetables mentioned, it is calculated by garden specialists of the U. S. department of agriculture that enough space could be found for them in one-fourth of an acre. However, it is advised that the gardener, unless he has had one or more years' experience, center his work on as few as six of the more important vegetables. For most of the vegetables listed the plantings may consist of the entire quantities mentioned. Relatively small quantities of cauliflower, eggplant and parsley should be sufficient for most families. The entire supply of string beans, bush Lima beans, sweet corn, lettuce, peas and radishes should not be planted at one time, but successive plantings two or three weeks apart should be made so that a fresh supply of the vegetables may be had throughout the season. Of early Irish potatoes 1 peck to 1/2 bushel will be required, and of late potatoes 1/2 bushel to 1 bushel or more, depending upon the amount of ground available for this purpose. If abundant space is available it may be well to grow enough Irish potatoes to last throughout the winter.

CANCELED CHECKS

OFTEN we are called on to produce cancelled checks which settle an account in dispute.

There is no arguing about the evidence—the check—its amount, endorsement and date are final.

Is it not strange that there are still some people who don't apply this insurance against double payment to their own personal bills? And it does not cost anything, either.
