NUMBER 25.

NEW PHYSICIANS FOR CEDAR CITY

Dr. Samuel Russell of Chicago and Dr. H. H. Wilkinson of Hurricane Will Practice Here.

Dr. Samuel J. Russell, of 1500 E. Marquette Road, Chicago, and who is well known to all Mormon elders and other Utahns who have visited that bustling city during the past several years, has decided to dispose of his various and extensive interests in the "windy city" and come to Cedar City to engage in the practice of surgery and medicine, and has formed a co-partnership with Dr. H. H. Wilkinson of Hurricane, who has also determined to locate permanently in Cedar City. The upper floor of the Cedar Investment building has been secured for offices and hospital quarters, and will be renovated and arranged for use as early as possible. Dr. Russell left for Chicago Tuesday to close out his affairs, which include two office suites, an interest in a hospital, two homes, and various investments. He leaves a very extensive and lucrative practice to come here, and strange to say, his motives for making the change are purely of a religious nature. He was born in Utah, and after graduating from medical college believed he saw larger opportunities in the east for growth in his chosen profession. During the fifteen or more years that he has resided and practiced in Chicago success has come to him, and he has held a number of positions of responsibility and trust. Keeping well abreast of the progress in the medical and surgical profession, he has successfully performed practically all the major operations known to modern surgery, and has accumulated many interests, but he has retained his standing and faith in the Latter-day Saint religion, and both he and his wife have grown dissatisfied with opportunities there afforded for religious worship. The only chapel is on the opposite side of the city, and 20 miles from their home. Further, they have a family of six daughters, who are beginning to arrive at ages of maturity, and the parents are unwilling that they should grow up in that environment.

The upshot of the matter was that the Doctor decided to come to Utah and look for a desirable location to practice in a Mormon community, and having in mind Provo as the most desirable location. When he arrived at that place he found the field so fully cornered that there was practically no opportunity to get in, either by buying or otherwise. He returned to Salt Lake and at the office of Dr. Woodruff, with whom he was well acquainted, he met Dr. Leonard and accepted an invitation to accompany him on his trip to this place. Here he encountered Dr. Wilkinson, who was making preparations to move in here from Hurricane, and a partnership agreement was the result of their conference.

Dr. Russell will pack and ship his instruments, office furniture and other needed effects as soon as possible and will follow as soon as he can get his affairs in shape. Dr. Wilkinson will ship his effects here immediately, and will occupy the new offices as soon as they can be gotten in shape for him. Dr. Wilkinson has devoted himself principally to the practice of medicine, having specialized in dietetics, hygienics, therapeutics and other branches often neglected or overlooked by the regular practitioner. He has been phenomenally successful in the treatment of pneumonia, affections of the heart, kidneys and other internal organs, and leaves a lucrative and fast growing practice to come here, but has had this desire in mind ever since leaving college. He states positively that he has no intention of ever leaving Cedar City again, and prefers a residence here to one in Salt Lake or other metropolitan city.

They should make a combination that will be hard to beat, and with Dr. Bergstrom, a progressive, conscientious and obliging young M. D. already in the field, Cedar City can feel that once more her needs in the matter of physicians and surgeons are well provided for.

While Cedar City is now and has been for a number of years a good field for the practice of medicine and surgery, it is as much the prospects

ROCK WORK IN CANYON GULCH

Cedar City People Save Day for Important Inter-County Highway By Bidding on Construction.

It coming to the notice of Cedar City people, mainly by accident, that the State Road Commission was asking for bids for the construction of three miles of difficult road through the Cedar Canyon Gulch, and that there was a likelihood of the improvement being indefinitely delayed if not permanently lost by reason of the fact that up to date there was only one proposal submitted for the work, interest was at once awakened. As a result a party composed of R. A. Thorley, Jos. S. Fife, County Road Commissioner Urie, Heber Jensen, all of this place, and Engineer Geter Gardner of Newcastle visited the survey for the road and estimated the cost of construction. In consequence of the visit it is probable that two more bids will be submitted for the road work, which being in solid rock and a considerable distance from the foot of a perpendicular cliff, will necessarily be difficult and expensive.

Bidders have until June 17th to get their bids to the State Road Commission, and it is hoped that a satisfactory bid will be submitted, which will justify the commission in awarding the contract, and which will at the same time furnish some lucrative employment to local people, for it is believed that the people residing here can perform the work more economically and satisfactorily than an outside contractor with imported labor can do it.

The road is very badly needed and it is hoped that there will not be any unnecessary delay. This is the first season in a number of years that there has not been some sort of a passable road through the Gulch.

When completed this road will not only become an important inter-county highway and be of very great convenience to local people, but will also open a large and valuable body of timber to market, which is much needed in these days of lumber scarcity.

BIG EXPEDITION WILL VIEW SOUTHERN UTAH SCENERY

A party of Salt Lakers who are coming to join in a camping trip in the marvelous scenery of this section, taking in the Cedar Canyon and the Cedar Breaks, Duck Lake country, the Hurricane Breaks and winding up at Zion Canyon in the Wylie Camp, is expected to arrive here on the morning of June 21, and the party may leave for the hills the same afternoon. So far as known at present, the visitors will include Dr. Middleton, Dr. Tyndall, Dr. Pack and one or two others, possibly including Dr. Leonard. Here they will be joined by a number of local people, probably including Drs. Macfarlane and Bergstrom, Francis Middleton, William Flannigan, Richard A. Thorley, Dr. Bergstrom, Evelyn Parry, Julius Rosenberg, Randall L. Jones, William R. Palmer, Supt. L. John Nuttall, Atty John M. Foster. Several others are also considering going.

All those contemplating going with the expedition from this place are requested to meet at the office of Dr. Macfarlane Sunday evening for the purpose of making final arrangements for the trip.

Wish we could all go, don't you, dear reader?

DR. RUFUS LEIGH MAY LOCATE HERE

Dr. Rufus Leigh, a native of Cedar City who has made good in the professional class as a D. D., and who was recently given an honorable discharge from the dental service of the United States army, with rank of First Lieutenant, is in Cedar City filling a temporary engagement at the request of Dr. R. A. Thorley, whose office he is occupying. Since his release from service Dr. Leigh has opened offices in Salt Lake City, and is fast building up a good practice there.

(Continued on page eight.)

of future growth and development as any present opportunities that have influenced Dr. Russell to come here.

STORIES FROM IRON COUNTY ARE TRUE

MOUNTAINS OF MINERAL SEEN BY MINING EDITOR OF SALT LAKE TELEGRAM, AND GREAT DEVELOPMENTS ARE PREDICTED.

(By Ira C. Tichenor, in Salt Lake Telegram.)

Mother Nature, when completing her work of mineralizing the lands of the world, evidently dropped her partially emptied ore bucket in the district now known as Iron County, Utah, and declared her labors completed; for without exaggeration and with no intention of detracting from the proven greatness of other mineral districts of this commonwealth, it can be stated that in this county named, and more particularly in the southwestern portion, there exists a mineral zone of greater extent and probable richness than any yet discovered on the face of the globe.

There are veritable mountains of iron and of gold, silver, copper and lead, intermingled or amalgamated. As to the extent of the deposits of iron ore, the recent statement that there exists in this region an amount sufficient to supply the demands of the entire world for a thousand years is not an exaggeration.

It is there in ledges some more than fifty feet in thickness, and in deposits spreading out over the country in square miles of extent and of great but undetermined depth, and which can be worked by means of steam shovels.

In quality the ore compares with its greatness in quantity, practically all of the tests thus far made showing 60, 70 and even higher percentage of iron, which not infrequently it is found in a native state and with the appearance of having come direct from Vulcan's forge.

After a personal investigation of the reports of the existence of evidences of deposits of minerals other than iron, the statement that such ores exist in amounts practically equal to those of iron would seem to be justified.

For miles the mountain slopes are fairly blanketed with pieces of rock, more or less mineralized. Mere scratches of the surface at almost any point reveals ore containing values. Shipping ore has been taken from and can be found in what can be described as only gopher holes—shafts of from ten to fifty feet—and tunnels whose breasts are but four or five feet from the outer air; quartz ledges that in some instances appear directly on the surface and can be traced for miles; fractures that can be followed as the result of erosions in canyons, from one side of the mountain to the other; while all around and in assuring conformity can be detected the presence of the white mantle of mineralization—the lime formation.

The limited investigations thus far made show the presence in greater or less quantities of gold in all of the ores; and in combination with one or more of the other metals; ore which gives values in silver only, while specimens of native copper have been taken from ledges which are declared to have been traced for miles.

The greater percentage of the metal bearing rock contains the four metals mentioned and in an amalgamated form, and it is an interesting geological and metallurgical fact that thus far there has been found no evidence of the presence of zinc, the fifth member of the group of associated ores comprising gold, silver, copper, lead and zinc.

In addition to the immense deposits of metalliferous ores there exist in the same locality deposits of coal measured by the billions of tons, while gypsum, potash, salt, alum and chalks exist in unmeasurable quantities.

Awakening is Coming.

The question naturally arises, why have not all of these various deposits been developed?

Possibly there are at least three explanations. One is the absence of transportation facilities, the various mineral districts varying from twenty-five to forty miles from the nearest railroad. Another is that big eastern steel interests have fought every move

looking to the development of the immense iron deposits, while other interests do not relish the idea of further competition in the coal trade, and the same is true as to the gypsum deposits in connection with the cement industry.

As to the precious and other minerals named, the reason why there has been no development worth mentioning is the fact that much of the land was located years ago, principally by farmers, who possessed no knowledge of mining and who did their assessment work more as a recreation than as a matter of business.

Some of them, however, had unbounded faith in the future of the section as a mineral district and have made conscientious efforts to improve their holdings. Among these are the Page Brothers, Daniel and Robert, and the Thornton brothers, Edward and Joseph, who now are in a fair way to realize handsomely from their work.

Already there are signs of the awakening throughout the district, due to the assured construction of a long-needed railroad that will tap the great mineral sections and the rich farming districts.

This railroad, as previously has been announced, will be constructed by the Old Capitol Petroleum, Fuel & Iron company, whose officials state that arrangements practically are complete for the beginning of construction of the road, which will run from Lund, on the Salt Lake Route, to Cedar City, a distance of 33 miles.

A Live Wire Turn Loose.

The prospective construction of the road has attracted considerable attention to the district, while the presence of a real live wire in the community has done much to stir up interest in the situation. This is E. J. Eddards, whose interesting history already has been told in the Telegram, but the following from the original story can appropriately be reproduced:

"After an absence of twenty-five years almost to a day, E. J. Eddards, known to old time mining men of Utah and Nevada as 'Death Valley Joe,' has returned to his original stamping ground in Iron County.

"Not only has Mr. Eddards 'come back' in the physical sense, but in a financial way, and with the prospect in the latter construction of becoming one of the captains of the mining industry.

"When 'Death Valley Joe,' which appellation Eddards does not resent because of his present and prospective success, discovered the Barefoot mine in the Death valley on Nevada-California line, he was barefoot and wore gunnysacks in lieu of leather footwear to protect his pedal extremities from the hot desert sand, and because of this fact the mine took the name by which it has been favorably known for a number of years. Today he left in his own touring car on a business trip to Salt Lake.

"When, also, he left Cedar City a quarter of a century ago, he was not a miner in the true sense of the word and he was not aware of the existence in Iron county of any minerals except iron, some copper, which he came across in working on the iron deposits, and of coal.

"His return with a practical knowledge of mining and of geology as it pertains especially to cinerology, having during the period comprising a third of man's allotted span of three score years and ten, since leaving Utah visited or operated in practically all of the celebrated mining districts of the world.

Outside Capital Interested.

Eddards has accomplished much since his return. He has created syndicates of holders of various kinds of mineral lands and is interesting outside interests in the properties. Thus far he has made several deals, one of them involving iron lands, which were acquired by big San Francisco interests for \$250,000. Development work on this property already is in pro-

RESERVE OFFICERS TRAINING CAMP

Cedar City High School Students Receive Invitation to Take Training in Michigan Lake Camp.

Boys from Cedar City will be invited to a Reserve Officer's Training Camp on Lake Michigan this summer. The encampment has been named Camp Roosevelt, as a living memorial to the dead statesman, and 15,000 men and boys will be given a period of intensive military-physical-education training there between July 6 and August 31. Captain F. L. Beals of the United States Army will be the commanding officer.

Camp Roosevelt is being established at Muskegon, Michigan, as a training place for the Chicago High School boys who are in the Reserve Officers' Training Corps, but it is not necessary to be from Chicago or to have had previous military training to be a Camp Roosevelter. It will be an all age, all American camp, open to recruits between the ages of 12 and 45.

The military training will include drills, machine gun practice, ground aviation, radio instruction and other military features. The physical training will include calisthenics, baseball, tennis, golf, swimming, rowing and hiking. The educational training will be under the direction of Chicago High School instructors and will cover all high school subjects. This feature is optional with the recruit.

Camp Roosevelt is not a profit making institution. It is being financed by a committee of patriotic Chicago citizens who believe that it may pave the way to a program of national preparedness at all times. The charge as far as the recruit is concerned, is only \$1.00 per day to cover subsistence and equipment, and an enrollment fee of \$1.00. This will pay for all expenses at the camp including board, necessary equipment, instruction and a tent to sleep in. Recruits can arrange for two, four, six or eight weeks of training as desired.

Camp Roosevelt will be under strict military discipline and the commanding officer will have complete charge of all added features of training.

So many inquiries are coming in regarding the camp that it has become necessary to establish executive headquarters at 21 N. LaSalle St., Chicago, from which full information may be secured upon request.

DR. BERGSTROM FORMS NEW FIRM WITH DR. SUNDWALL

Dr. O. Sundwall of Fairview, Utah, who was a college classmate of Dr. Bergstrom, and also a brother of Dr. John Sundwall, formerly an instructor at the University of Utah, is here forming a co-partnership with Dr. Bergstrom of this place. For the past year Dr. Sundwall has been acquiring an experience in the capacity of resident physician at the St. Marks Hospital in Salt Lake City. He is an affable and pleasant gentleman to meet and no doubt has the foundation laid for a successful career in his chosen profession.

This partnership has been planned for some time, but it was not the intention of Dr. Sundwall to come to Cedar City before fall. However, recent developments and the apparent increasing demands for the services of doctors, has caused a change in his plans and he states that he is now here to remain.

Under the supervision of Mr. Eddards, who also has employed a force to begin the development of the coal land holdings of the Old Capitol Fuel & Iron Company. Both of these projects have been started as the result of positive assurance of the construction of the railroad.

Eddards also has interested mining men in the district, with the result that a company known as the Ora Del Rey has been formed and acquired extensive holdings at the mouth of what is known as Bullion Canyon, and soon will start development operations in a big way.

The Michigan-Utah company of Salt Lake, operating in the Alta district, also is reported to have acquired locations with the purpose of conducting development operations, while a Salt Lake syndicate headed by An-

DUSTIN REPRESENTS IRON CO. AT CAUCUS

Learning Iron County Was Not Represented at Convention American Legion, E. R. Dustin Fills Gap

June 5, 1919.

Mr. Chas S. Wilkinson, Cedar City, Utah.

Dear Sir: As you perhaps already read in various papers that I represented Iron County at the caucus of the American Legion held in Salt Lake City for the purpose of forming a temporary organization until the finished organization can be passed upon by representatives from all the twenty-nine counties which are to comprise the State organization.

When I found Iron County was not represented I conferred with General Young and at his request represented our county, voting on the various committees as a representative of our county.

I find that we are going to have to speed up the work in organization to keep abreast of the progress made in other counties. It is therefore necessary that each and every man who has seen service to take it upon himself as a committee of one to do his best in making Iron County one of the foremost in support of what appears to be the greatest order of comradeship in the world today.

The spirit of helping the government was one of the most important factors in this organization. The purpose as stated in the caucus was not to see what we could sandbag out of the government, but to see how much we could put into the government by lending it the moral support of this great order which in the near future will represent the wishes of four million of America's finest men.

In the preamble of the constitution of this order is the desire and wish of every loyal citizen of this great country and we cannot dwell too long upon the masterly way in which it is written or upon the noble virtues it embodies.

At a later date I will attempt to set down some of the most important things which come up and will also send you as much of the details of organization as possible and as I will be down again in a short time any publicity you can give this matter will be greatly appreciated by me and by the local post when formed.

Trusting that this matter will meet with your hearty approval and hoping the boys will get together on this wonderful plan, I remain,

Yours for Iron County,
E. R. DUSTIN, Jr.

EMPLOYERS TO FILE RETURNS BY JUNE 16

Under the revenue act of 1918 all employers of labor, whether in large or small numbers, are required to forward to the commissioner of internal revenue in Washington returns of information giving the names and addresses of all individuals to whom payments of salaries, wages, rents, interest, commissions or other gains, profits and income of \$1,000 or more were paid during the year 1918. A separate return for each employe is required.

Collector Justus S. Wardell points out that these returns must be in the hands of the commissioner not later than Monday, June 16, otherwise heavy penalties will immediately be assessed against the offending corporation, partnership or individual.

Real estate agents are required to report the gross amount received in rents or other income remitted to their principals, if such amounts for 1918 were \$1,000 or more.

Returns of information for each individual employe must be made on form 1,099, accompanied by a letter of transmittal on form 1,096. These forms may be obtained at the office of the collector and from all deputy collectors.

Andrew Hurler and W. H. Boothe have taken up claims in three sections of the district.

These are only a few of the evidences of activity in the region, which promises to be the center of great mining operations within the comparatively near future.

Well, summer is upon us.
