BOTH PARTIES HAVE THEIR QUARRELS

There is a fight on, not alone in the Republican party, but the Democrats are having their bitter controversies.

Bryan went over the country, explaining that to ratify the peace treaty with reservations was the proper thing to do, as the reserva- of the School of Preventive Medicine,

Now President Wilson, without referring to Bryan, appeals to ed the usability of dried milk, to which his party to avoid Bryan's plea of expediency and stands firmly for certain butter fats are added. the treaty.

President Wilson's strongest attribute is his uncompromising all under 6 months old, and the most devotion to that which he believes to be right, and whether one agrees sult. with him or is against him, there is admiration for his firmness.

Bryan, who has become an apologist, has weakened his position. While Wood and Johnson are having a bitter personal conflict within the Republican ranks, much to the delight of the Democrats, now possible to build a milk from the the Republicans are deriving no small degree of comfort in the dry powder that, for practically all purexchange of blows between Wilson and Bryan.

BEFORE THE WORLD WENT CRAZY

Here are some figures on the cost of living up to five years ago, as vouched for by government statistics:

The average retail price of sugar between 1911 and 1915 was 6 cents a pound; of flour 3 1-2 cents; of potatoes 1 1-2 cents, and the retail cost of a year's supply for a family of average size, or 4.5 per-

Sugar, \$23, or four sacks, which would now cost \$112. Potatoes, \$15, or 1000 pounds, which would now cost \$80. Potatoes, \$15, or 1000 pounds, wihch would now cost \$80. Butter, \$23; now \$40.

Eggs, \$18; now \$36. The meat used by an average family in a year is over 200 pounds.

Milk also has more than doubled in price. This gives some idea of the heavy burdens being carried by large families in which there is not more than one wage earner.

LOST SUGAR SUPPLIES

During this period of sugar scarcity, it is interesting to read in government reports that of the bees of the United States were properly cared for, the deficit in sugar could be more than made up in kittins once, but they never will agen. honey.

It is estimated that 100 colonies of bees, working over a radius prize than if it ony had one, even if of two miles will gather twenty-two and one-half tons of nectar, but, owing to improper methods, only two and ene-half tons is made pritty reckliss the ferst 7 or 8 on acavailable for human consumption.

An authority claims that the total secretion of necktar by flowers for exceeds the amount of all sugar consumed by the American cause its got more than one life left people.

The average American has a sweet tooth. Twenty years before the pioneers came to Utah, the consumption of sugar per capita-and kittin, it will chase it all erround inthat means sugar in pies, cakes, candy and syrups—did not exceed loyably, but if you hold up a peece eight pounds. As late as 1855 the per capita consumption was only thirty pounds. Today ninety pounds of sugar for every man, woman ing why you dont chase it erround and child are required.

WHAT TO DO WITH SUGAR

On Saturday and Sunday, the Utah-Idaho Sugar company, in large advertisements, offered to submit to a searching investigation by a committee to be appointed by the governor, and Governor Bamberger immediately availed himself of the opportunity, and now we are promised more light on this disturbing sugar question.

At the same time the sugar company made announcement that it stands ready and willing to turn over its stock of sugar to said com- their name they jest call them Kitty mittee, with the understanding that contracts entered into between the company and local distributors and manufacturers be honored, and that the company be relieved from further responsibility.

This may point the way for relief. If the people of Utah go inte the season of fruit preserving and find no sugar is to be had or that the available supply is held at an outrageous price, the sugar industry will suffer because of adverse public sentiment.

We understand there are reserve stocks of sugar held by all the companies. Before to late, those stocks should be protected from the profiteer who has been working overtime for the past six months. If the compantes themselves cannot exert a sufficient supervision to protect the interests of the people, then there should be an immediate distribution to communities, under direct charge of public officials or committees to be named by the people.

THE RODENT PEST

Health authorities trace to the rat the great plagues which swept. over Europe in the past.

Dr. D. E. Lantz says the "black plague" of the fourteenth century was spread by rats. The plague raged for fifty years, and sale from the Philadelphia navy yard. destroyed one-fourth of the people. The great plague of London daily flights made by experienced avikilled more than half the inhabitants that did not escape from the ators. The flights will be made in va city. These diseases are conveyed by rats and transmitted by the rious types of machines that will be fleas that infest the rodents. It is said that the entire role of the A center of attractions probably will rate in spreading disease is not fully determined, but even epidemic be the Liberty motor, which will be jaundice and septic pneumonia are traced to the little pest and it is set up in running order to demonstrate known to perpeturate trickings in the pic known to perpeturate trickinae in the pig.

The first rat in the United States came just before the revolution oline. It is intended to equip one of and was the Norwey rat. The black rat arrived soon after. But the the F-5-L type of planes with a Norway or sewer rat is the greatest of all rodent pests. Its pecundity plete radio apparatus so that during is beyond that of any other animal large or small. It breads six to the flights spectators may communiis beyond that of any other animal, large or small. It breeds six to the flights speciators may communicate with the machine. The machine ten times a year, with an average of ten young to the litter. The also will be equipped with complete females breed when three months old. Get your pencil and estimate ordnance equipment, including the a year's production.

Rats regularly move in the spring from cities to river banks and sortment of the various accessories for a two million dollar endowment powers law and industries with Rus-

country places and return each fall.

This reference to rats is for the purpose of calling attention to flights. the fact that the garbage heaps of Ogden, where the city has its dumping grounds, are infested with not only Norway rats, but tame rats allowed to escape and become wild.

Plans for the widespread slaughter of the pests should be worked out without further delay. The government will supply the poison Episcopal church, is dead at his home and send an expert to supervise the work, if the city makes the

Before the rats work into every part of the city, they should be fought back.

request to the proper authorities.

HEALTH

lealth Questions Will Be Answered if Sent to Information Bureau, U. S. Public Health Service, Washington, D. C.

BY UNCLE SAM, M. D.

(U. S. Public Health Service.) If experiments now being conducted by the United States public health service prove successful it may soon be possible to furnish the purest American milk to babies throughout the world and save hundreds of thousands of lives annually.

In most of the tropical countries here is no cow's milk, the recognized standard for bottle-fed bables. Even in certain parts of the United

States there fs no cow's milk, or the quality is so poor that it is harmful rather than helpful.

In co-operation with the Boston Baby Hygiene association, the Department of Pediatrics of Massachusetts general hospital and Prof. M. J. Rosenau, nead Harvard university, the public health service has pretty clearly demonstrat

For several months this kind of milk has been fed to bottle-fed babies,

Almost without exception it has elped the bables.

In recent years the process of dry ing and reconstructing the milk has undergone many changes until it is poses, is the equal of the milk from the finest American dairies.

It has the added avan ge, moreover of being extremely low in bacteria count, due to the drying process, and the addition of butter fat may be regulated to suit the needs of the individual baby, or grown person.

These experiments are of particular value for another reason.

Practically every dairy has a certain amount of milk, often a large quantity, which is wasted,

This waste may now be turned into a profit by making the dry milk powder, which may be kept fo ra long period and marketed anywhere in the

Rippling Rhymes

Balmy Days.
When arrives the month of May winter's gone, beyond dispute; which reflection makes us gay, and our loud bazoos we toot. It is good to go to bed, twenty minutes after ten, know ing that the storms we dread for long months won't come again. It is good to rise at morn in a balmy atmosphere, gazing on the sprouting corn, and the playful colt and steer. May's a pippin and a peach, o'er whose charms al bards enthuse; of the pebbles on the beach, she's the one the wise boys choose. Oh, a month ago we felt that the winter might return; and the slee again might pelt, and there might be snow to burn. And it kept us in suspense, and the weather prophets all were forever on the fence, knowing not what might befall. And a month from now we'll fry in the superheated air; and no doubt the passers by will forgive us when we swear. But May brings us no distress in her genial It's the month that hits the spot, after them winter, cold and drear; every other month, I wot, should be May, throughout the year.
