## IN THE WORLD OF DRESS

### FASHION ABOLISHES COLLARS

The neckwear designers are decidedly concerned over the fashion for the collarless blouse and gown. We are given over to a vast variety of neckwear invention. This constitutes one of the most popular and paying departments in nearly every shop. If the demand is to be steadily cut off there is reason for concern. That fashion calls for a lack of collars is quite certain; will sufficient women head the call to diminish the sales of neckwear?

The revival of fashions that existed between the twelfth and fifteenth centuries, until the dawn of the renaissance in Italy is responsible for the abolition of collars. There is no longer any attempt to insist upon the one way of cutting the neck line, which was the genuine way of the fourteenth century. There are straight lines and round lines and delta lines, there are lines that go up in the back and down in the front and the other way around, so that there will be enough to suit the majority of faces.

### SKIRTS FOR SPRING

Skirt widths for spring average two and one-half yards at the hem. Many skirts are high-waisted, others have fancy belt arrangements. The size of sailor, cape and draped collars on sport costumes seems to be increasing with each new model that is developed.

### Pockets

Two-in-one pockets are a spring style feature of interest. These are two pockets in one panel, the patch pocket being slit at the bottom to hold small objects for change.

## DRINK HOT TEA FOR A BAD COLD

Get a small package of Hamburg Breast Tea, or as the German folks call it, "Hamburger Brust Tee," at any pharmacy. Take a tablespoonful of the tea, put a cup of boiling water upon it, pour through a sieve and drink a teacup full at any time. It is the most effective way to break a cold and cure grip, as it opens the pores, relieving congestion. Also loosens the bowels, thus breaking a cold at once. It is inexpensive and entirely vegetable, therefore harmless.—Advertisement.

## BREAD RATIONS ARE DECREASED

AMSTERDAM, March 23, via London, 1.39 p. m.—The bread ration in Germany will be diminished one-fourth beginning April 15, according to a dispatch from Berlin in the Weser Zeitung of Bremen. The potato ration will be continued at five pounds weekly and the meat ration will be increased by 250 grams weekly.

It is announced, adds the dispatch, that the curtailment in the use of wheat is necessary to insure the present stocks lasting until next harvest. The announcement of the bread ration reduction has caused consternation in Germany. The Rheinische Westfaelische Zeitung says the reduction is a very painful measure.

The Cologne Volkszeitung reproduced a semi-official statement which contains the following: "It should not be concealed that this new restriction means a great sacrifice and can only be borne by a people who for the sake of the highest aims will bear even a heavier burden and who have a firm confidence that their patient endurance will be rewarded before long by a glorious peace."

### WELL PACKED.

In their morning walk Jessie and her mother passed the home of a lady who was so ill that a large quantity of straw had been strewn over the street to deaden the noise. The straw aroused Jessie's curiosity, and she asked many questions about it. "It has been put there," her mother explained, "because last week they brought a little girl baby to that lady who lives there."

Jessie cast one last contemplative look at the straw.

## CORNS HURT TODAY?

Lift your corns or calluses off with fingers and it won't pain you one bit.

Yes! You truly can lift off every hard corn, soft corn or corn between the toes, as well as hardened callouses on bottom of feet without one bit of pain.

A genius in Cincinnati discovered freezeone. It is an ether compound and in tiny bottles of this magic fluid can now be had at any drug store for a few cents.

Apply several drops of the freezeone upon a tender, aching corn or a callous. Instantly all soreness disappears and shortly you will find the corn or callous so shriveled and loose that you lift it off with the fingers.

You feel no pain while applying freezeone or afterwards. Just think! No more corns or calluses to torture you and they go without causing one twinge of pain or soreness. You will call freezeone the magic drug and it really is. Genuine freezeone has a yellow label. Look for yellow label.—Advertisement.

## Kitchen Suggestions and Recipes

To prevent odor from boiling cabbage add pinch of baking soda. Before boiling milk rice sauceman with hot water and milk will not stick to pan.

Use old white brooms, trimmed down, to clean pans when food sticks on bottom.

Sprinkle the top of custard pie with a little sugar before baking to make a nice brown color.

To remove spots on oilcloth caused by hot dishes, rub with alcohol and polish with dry cloth.

Jam that has become hard and sugary can be softened by placing it in a pan and melting the sugar. Let it cool and it will be almost as good as when first made.

When cleaning pieces of silver with fillagree work, apply the cleanser with a soft old brush and polish with a small piece of velvet carpeting. The pile of the carpeting sinks down among the chased work and cleanses and polishes it better than anything else, without scratching or injuring the silver.

### TURNIPS A LA NEW YORK

Wash and pare turnips and cut into half inch dice to make three cups. Boil in salted water until tender. Drain, add one-third of a cup of melted butter, season with salt and pepper and sprinkle with half a teaspoon of finely chopped parsley.

### CURRIED CHEESE

Two ounces of grated cheese, one tablespoon of oleomargarine, one cooked onion, half a cup of milk flour or cornflour, seasoning to taste.

Melt the oleomargarine in the milk and curry powder; thicken with the cornflour (mixed to a smooth paste with a little cold milk). Cook for three or four minutes, add the grated cheese and stir until the whole is dissolved. Season and pour on slices of hot buttered toast.

### LITTLE GIRL HAD CROUP.

Every mother knows and fears croup. Mrs. R. M. Roney, R. F. D. 2, Stanford, Ky., writes: "My little girl had been having croup every few nights. I began to give her a few drops of Foley's Honey and Tar Compound every two or three hours, and that night she slept well, never coughed again, and the next day her cold was gone. To all of my friends I am saying: Get a bottle of Foley's Honey and Tar for a gripper, coughs, colds and croup. A genuine cure. Price, 25c. R. M. Roney, R. F. D. 2, Stanford, Ky.—Advertisement."

## UNITED STATES TO BE VIGOROUS

### Sweeping Measures Offensive and Defensive Are to be Put Into Effect.

WASHINGTON, March 23.—The American government has decided upon sweeping measures to be put into effect following the expected declaration by congress soon after it meets April 2 that a state of war exists between the United States and Germany.

Fully appreciating Germany's policy of acting in war first and talking afterwards, the government has determined to provide against every possible emergency.

Broad questions involved were discussed today at a long cabinet meeting to which heads of departments carried reports on preparations already made and others contemplated. Details are being taken up between President Wilson and the individual cabinet members.

Regrettably the government apparently has decided that since Germany is making war upon the United States through ruthless killing of Americans and destruction of their ships, the issue must be met with steps much more far-reaching than mere attempts to protect individual merchant craft.

Aggressive Measures. If anything is ahead to prevent this it is not now foreseen. Once a state of war is declared to exist aggressive measures are expected to be taken.

As outlined after today's cabinet meeting, the preparations of the government are not to be for a short war, or a war marked by half way measures. Nothing is to be taken for granted. A complete program, has been prepared so that everything done will be carried out in a systematic and orderly manner.

The exact measure of American participation in the war is not expected to be revealed until after the president addresses congress and until public sentiment crystallizes. So far as is known no political alliance with the entente allies as well as naval cooperation is possible and the government will be unsparing in both money and supplies for the allies.

The president has not yet written his address to congress. He is expected to be specific and to make clear that the American government and people have no quarrel with the German people, but cannot tolerate the acts of the German government.

Whether an army will be sent abroad is one of the questions of the future. It would take many months to train an army for such service and many things may happen in that period. But this possibility is being taken into consideration and the government proposes to be ready for it as soon as practicable.

**HEALTH TALKS**  
BY WILLIAM BRADY, M.D.  
Factors of Asthma

A young woman had what she called a "cold" and a few weeks later experienced her first attack of asthma. Upon being questioned she stated that her coryza had been attended by a profuse purulent discharge, which led to a careful examination of the nose.

A chronic ethmoiditis was discovered. The ethmoid cells are air spaces in the roof of the nasal cavity, lined with mucous membrane continuous with that of the nasal cavity. When inflamed, at the time of the alleged "cold," there had been retention of bacteria and absorption of their protein, which was sufficient to explain the asthma.

A woman was subject to seizures at the time of the menstrual cycle. It was found that she had a chronic abscess in the pelvis, and the congestion incident to the period served to prevent drainage and thus to cause absorption of bacterial proteins, which caused her asthma.

A man developed asthmatic seizures every time he dined in a certain restaurant. Naturally, some article of food was supposed to be the cause—sensitization to some special food protein. But it was finally discovered that at a cat which was kept in the restaurant was the actual cause, and by merely changing his eating place the man found relief.

A physician who had suffered from asthma for fifteen years had gallstones. The gall-sac was surgically drained. The operation gave marked relief to the asthma, and the patient was free from asthmatic seizures while the gall-sac was kept open for drainage, but had a seizure as soon as it was allowed to close. Evidently the focus from which the bacterial protein came in his case was the chronic gall-sac inflammation.

A woman who adopted a milk diet as a remedial measure for some digestive trouble, developed a severe asthmatic seizure which lasted for several days. It was the first in her experience. Some months later she again went on a milk diet, and promptly suffered another severe asthmatic seizure. She had always taken small quantities of milk or cream in her tea and coffee, but never more. The excess of milk seemed to supply the protein which produced anaphylactic reaction in her case.

A peculiar sensitization to some protein substance seems to be the cause.

## HAND LABOR IS BEING DISPLACED

### American Machinery Is Now Used in Europe in Enormous Quantities.

LONDON, March 24.—The use of machinery, particularly American machinery, in place of hand labor, is being widely discussed as one of the large problems to be met with after the war. Under the stress of war enormous quantities of American machinery have been brought into England, France and other countries at war, for manufacturing harness, shoes, guns, shells, and the whole range of war equipments. At Havre the Belgian government factory, employing 12,500 workmen, has 90 per cent American machinery. Going through these works, an Associated Press representative noted at every hand the machinery bearing the name of American firms—Bridgeport, Providence, Boston, Philadelphia, Cincinnati and many other points. The harness factory, for turning out cavalry and artillery supplies, was entirely equipped with American machinery.

The manager of the works said English machinery was good only on the huge, ponderous machines, but that American machinery was practically alone in the field on fine automatic work replacing the dexterity of hand work. He estimated that the heavy English and French machines, chiefly in the foundries and machine shops, were under ten per cent of the plant, all the rest being American. Some of the American machines were pointed out as having an ingenuity almost human. One of them, used in polishing the discs of shells, employed a magnetic current to hold the discs firmly while the emery wheels did the polishing. To the Belgian worker this was little short of magic, as he had always held the discs in his hand, while now the touching of a button gripped the discs until the work was done. There is the same influx of these labor-saving machines all over England, France and undoubtedly Belgium, and in fact all over allied Europe.

### Eyes of British.

Besides doing the war work of all kinds, this new use of machinery has opened the eyes of producers as to what machinery could do for increasing British production when normal conditions are restored. It has been argued as one of the chief weapons to combat the revival of German manufacturers and another "Made in Germany."

**Nothing Like It On the Market**  
For Colds in Head, Nasal Catarrh, Catarrh of the Throat, Headaches.  
One simple tube will convince you.  
**Benetol Catarrh Jelly**  
absolutely without equal, pleasant and effective. The only one of its kind and germicidal catarrh jelly ever offered. Sold at all druggists in 25 cent tubes, packed with full directions to Red Cartons. Try it.

factor in asthma. It may be the protein material of bacteria, a food protein, or the emanation of some species of animal or bird. Constipation often precipitates an attack in a sufferer. Changes of weather seem to have no influence, or at least only a good influence upon asthma.

### QUESTIONS AND ANSWERS

**Lime Not a Cause of Hardening of Arteries.**  
Kindly give me a diet for one afflicted with hardening of the arteries. I am afraid to drink milk on account of the lime in it. (W. W.)

ANSWER.—It will be very difficult for you to keep alive if you exclude all food which contains lime. Lime in the food or water has nothing to do with the condition of the arteries, rather, lime in the food is quite essential to health and longevity. The only general suggestion I can make is that the diet should be a minimum maintenance diet, and it should be principally vegetarian, but including milk and cheese and butter. Hardening of the arteries is not a condition for which a definite diet has been prescribed, without a personal study of the patient. I mean that if I had it I certainly would not adopt any cut-and-dried regimen recommended for all such cases.

### Mucous Colitis.

Kindly tell me whether there is a cure for mucous colitis. Do you approve of inoculation with colon bacilli? What is the best diet? Just what is mucous colitis, and what causes it? (Mrs. B. N.)

ANSWER.—Mucous colitis is inflammation of the colon including spasm of the colon and irregular attacks of colic and great nervous tension, with the expulsion of mucus and shreds and sometimes in casts of the bowel. It may be due to colon bacilli activity, if you mean vaccine treatment, yes, I approve of it. Generally a diet which leaves a large residue and one including plenty of oils or fats is helpful—vegetarian foods. Bowel washes are also helpful. The mucous tenacity may be removed by mental hygiene, rest, change of environment.

### A Baby's Rupture.

My baby was ruptured when three months old—a bulging at the navel, which went down when he strained or cried, and would apply a belt with a round pad or knob padded with cotton. The baby wore a rubber band around his neck. He is now six months old, and the bulging no longer shows. Is it advisable to keep the treatment up to the present time? He is now six months old, and the bulging no longer shows. Is it advisable to keep the treatment up to the present time?

ANSWER.—The doctor who applied it would be the one to decide that. However, it is a good idea to keep the rubber band on for a few weeks, so it may be advisable to remove the support now, unless there is a certain relief from the pressure and support of any appliance tends to weaken the natural strength of the abdominal wall, which is able if not necessary to prevent bulging of the weak place.

## SHAKE UP YOUR SHOES

Allen's Foot-Ease, the antiseptic powder to be shaken into the shoes and sprinkled in the foot, relieves the itching, burning, redness and takes the sting out of corns and bunions. Use when you put on rubbers or heavy stockings. Allen's Foot-Ease is a certain relief for swollen, callous, tired, aching feet. Sold by druggists everywhere. Always use it to Break in new shoes. Special price, 50c. FREE. Address, Allen S. Olmsted, Le Roy, N. Y.

many" campaign. One expert has shown that most of the factories in England were equipped in the days of steam, and have taken no account of electricity as a new motive power. He figures out that this old-time equipment cannot possibly compete with American and German production. This view is widely held, and besides the American machinery is already here furnishing its own argument in the war work.

At the recent labor congress at Manchester the delegates referred to this new use of machinery as one of the chief after-the-war problems, as it would limit and compete with the hand labor of men returning from the army to civil occupations. But while recognizing it as a danger, they appeared to accept the increased use of machinery, particularly American machinery, as one of the assured facts brought out by the war. One of the resolutions passed called on the government to give special attention to the needs of workmen resulting from machinery.

### MUCH EXTRA WORK IN MARCH

It's between seasons now, when few persons perspire as much as health demands. The result is double work for the kidneys, for the kidneys must throw out waste matter from the system that is eliminated through the pores when persons perspire. Overworked, weak or disordered kidneys need help now. B. H. Stone, Reading, Pa., writes: "Whenever I need a kidney remedy I rely on Foley Kidney Pills. They have been worth their weight in gold to me." A. R. McIntyre Drug Co.—Advertisement.

## GUGGENHEIMS ARE IN A SNOW SLIDE

WALLACE, Ida., March 23.—Simon Guggenheim, head of the American Smelting and Refining company, accompanied by several other officials of the big metal concern, including E. L. Newhouse and Edward Brush, were aboard a Northern Pacific train which was caught between two snowslides on the mountain divide between Idaho and Washington, according to word received here late this afternoon. The slides occurred about 10 o'clock this morning. A slide 500 feet in length occurred ahead of the train, while a 100 foot bridge was torn out to the west.

A special train has been dispatched to bring back the party, as well as the 200 other passengers aboard. There have been constant snows in this region for the last four months, with only slight thaws. An exceptionally heavy snowfall during the past sixty hours tumbled off into a rain added to the possibilities of slides. Several mines in the hills are covered up. One man, Earl McCarthy, was caught in a slide at Mullan and buried. Men and their families are being brought from the canyons into Wallace until the danger passes.

A dozen houses have been demolished by slides.

Coming, "The Escape." Watch for announcement.

## Princes Will Pour Their Wealth Into the Treasury of War.

### TO CRUSH GERMANY

### Conflict Expected to Continue Eighteen Months Longer—Teutons Misjudged India.

GWALIOR, India, Feb. 1.—(Correspondence of The Associated Press.)—The Maharajah Sindhia of Gwalior, one of the wealthiest and most powerful of the Indian princes, today told a correspondent of The Associated Press that he and the other rulers of India were prepared to pour all their resources into the common war effort until Germany was crushed. The Maharajah said that the world conflagration, by furnishing a common platform upon which all India could work, had done much to encourage co-operation among the Indian states and also to emphasize the essential unity of aims between them and the government of India.

Gwalior, whose people he rules, under the British government, is one of the central states of India, with a population of between 2,000,000 and 3,000,000. The Maharajah is a major general in the British army and gave his personal services with the British expeditionary force to China in 1901. During the present war, affairs of state have precluded his leaving Gwalior, but from the beginning he has been making great contributions to the British army. His troops have been in France, are fighting in East Africa and Egypt and are helping with the Indian frontier from Quetta and Bannu.

How much he has donated he will not know until after the war is over and the final accounts are in, but he has thus far expended somewhere in the neighborhood of 300,000 pounds (\$1,500,000) outside the upkeep of the hospital ship "Loyalty." To this great contribution, he modestly calls himself only a subscriber but, as a matter of fact, during the two years and more the ship has been in commission, he has financed itself and spent on it nearly 300,000 pounds. He is also expending 1,000 pounds a month for the upkeep of a convalescent home for officers and soldiers which he established at Nairobi, Africa, at the beginning of the war. The Maharajah gives where he thinks the need is most pressing, depending on the daily papers and on his agents in London for information. Thus if he learns that war material of any sort is wanted badly he immediately cables his donation to supply or help to supply the deficiency.

Today's interview took place in the palace and during the conversation his highness talked freely of many subjects. Regarding Germany he was most uncompromising.

"I believe that the war will continue for eighteen months longer," he said, "and I hope, for my part, that it will go on until Germany has been crushed. I am sure that all India feels as I do about this matter, quite the reverse of what he thinks the need is expected from us at the outbreak of hostilities."

"Germany firmly believed that India would join the Central allies. What led the Teutons into this error I cannot say, but they certainly misjudged the situation here badly. There never was a chance that India would turn against Great Britain."

"I don't mean to say that there is no sedition in India. There is, just as there is sedition to some degree in America or in any other country, but those who are plotting against the government are negligible in number, and they are no more representative of India as a whole than were the New York bomb throwers three or four years ago representative of the American people."

"By Germany's thought, for some reason or other, that we were ready to sever relations with Great Britain and banked on our support in the struggle. Long before the war began, Germany was busy trying to stir up sedition in India. I cannot prove this statement to you at this time, but I know it to be true."

"The attempts failed and today Hindustan is standing loyally with the rest of the British empire and will continue so to stand until the last gun is fired."

"In ordinary times we princes grouse and grumble ourselves a good deal—and sometimes, I think, we have had reason for it—but when the big crisis came it found us all rushing to tender our support to the king-emperor. That is only natural."

"This war has done India a great deal of good. By furnishing a common platform for us to work upon, it has drawn the princes closer together and, I hope, the government of India to them. Mind you, there was never any question of disloyalty among the princes, but they had not been given a chance like this before to show their devotion to the king."

"We worked along our own individual lines mostly. But the great common cause has changed all this and I hope for good. The recent conference of princes in Delhi, when forty of us met to discuss matters pertaining to the welfare of our states, was an evidence of this change."

"The past months of war have done more to strengthen the feeling of sympathy between the states and the government of India than anything else could have done."

The correspondent referred to the fact that at the time of the recent conference of princes in Delhi, when forty of us met to discuss matters pertaining to the welfare of our states, was an evidence of this change.

## OUCH! PAIN, PAIN. RUB RHEUMATIC, ACHING JOINTS

### Rub pain right out with small trial bottle of old, penetrating "St. Jacob's Oil."

Rheumatism is "pain only." Not one case in fifty requires internal treatment. Stop drugging. Rub soothing, penetrating "St. Jacob's Oil" right into your sore, stiff, aching joints and muscles, and relief comes instantly. "St. Jacob's Oil" is a harmless rheumatism cure which never disappoints and can not burn the skin.

Limber up! Quit complaining! Get a small trial bottle of old, honest "St. Jacob's Oil" at any drug store, and in just a moment you'll be free from rheumatic pain, soreness, stiffness and swelling. Don't suffer! Relief waits you. "St. Jacob's Oil" has cured millions of rheumatism sufferers in the last half century, and is just as good for sciatica, neuralgia, lumbago, backache, sprains.—Advertisement.

ference of princes in Delhi there was some talk that the conference might ultimately develop into a council of princes who should have a direct voice in matters of imperial importance.

"What would happen in India, your highness, if the British government suddenly should decide to grant absolute self-rule to British India, should constitute the princes absolute sovereigns and should withdraw entirely from the country?" the correspondent asked.

"Who would be king?" countered the Maharajah quizzically.

"By that your highness means that there must be a supreme head."

"Exactly. If you should take away our British sovereign someone else would have to rule. Who would it be? That is hard to say, but it would be a case of the survival of the fittest. If the British were to withdraw from India altogether the country would be plunged into chaos."

"But, of course, the British government will not withdraw and no one excepting perhaps a handful of hair-brained agitators, wishes it to withdraw. We want the British government to stay, for it is the greatest and best government in the world. We have a true devotion for our king-emperor and for his government, and all we ask is that we may be allowed to remain a part of the empire and do our share."

"The query was raised as to what the effect would be on India if the entente allies brought the war to a successful conclusion and Constantinople was allotted to Russia, as has been suggested."

"Your question involves the matter of religious sentiment," asked his highness.

"The correspondent replied in the affirmative."

"Such a settlement would have no effect on India," said the Maharajah. "I myself am not a Mohammedan, but I think I know the feeling of the country. Many people in India are extremely sorry that Turkey has placed herself in her present position, but no one is likely to exhibit active sympathy for her as she is ranged against the British government and their allies."
