

Your Christmas wish to appear well-dressed for the holidays can be gratified economically here. We have THAT clothing which is noticeable for the absence of queerly shaped pockets and cuffs, trousers with exaggeratedly broad bottom turn-ups, etc.—the kind WE have is the kind every self-respecting man will wear who desires not to be classed with the very young, inexperienced or the very ignorant man.

Watson-Tanner Clothing Co. 376 Twenty-fourth Street. "Where the Clothes Fit."

RECOUNT OF CENSUS IN OGDEN

There will be no material change in the census of Ogden, due to the recensus now being conducted by K. E. Leach, the expert special agent of the census bureau. Mr. Leach stated this afternoon that he would finish his investigations in this city tomorrow and that so far but few discrepancies in the work of the original enumerators have been found. Eight districts have been recensused and only one of these shows any faults of a grievous nature. In this district it is claimed that the census man made a mistake in the boundary line of his territory and included some names of persons living in another district. Just to what extent this duplication of names was carried is now being determined. According to Mr. Leach, however, it will affect the general enumeration of the city but little.

IN POLICE COURT

Charles Muhs, who was arrested on the charge of having stolen a bride, was arraigned in police court this morning. He pleaded not guilty to the charge of petit larceny and his case was continued. Muhs was placed under a bond of \$10. Charles Whitten was assessed a fine of \$5 for having been unlawfully drunk. He made no effort to deny the charge. Thomas Gallagher pleaded guilty to the charge of mendacity and a ten days sentence in the city's chain gang was doled out to him. A fine of \$5 was inflicted upon William Wilkenson, who allowed his horse to stand in the street without hitching.

EXCUSES FOR NOT GOING TO CHURCH

Rev. Hugh Birkhead, pastor of St. George's church on Stuyvesant square, tackles the problem of decreasing attendance in city churches from a new angle in his annual letter to his congregation which prefaces the new number of St. George's Church Year Book just published. He says that there are several obstacles to church attendance which appeal to people of understanding as legitimate excuses for not going to church on a Sunday, and these Mr. Birkhead says, must be faced frankly. "This is a downtown church," he says in his letter, "and there are hundreds of men who go downtown six days in a week and when it comes Sunday, for the sake of change, they prefer to turn their faces in another direction. I have been told this frequently. "Again, it is more possible today than it has ever been for people to get out of New York. The motor has provided another splendid excuse for not going to church; and the motor has come to stay. But the chief difficulty of all seems to me to be the growing conviction that exercise of the body is a legitimate excuse for the neglect of the soul. I find that many fathers and mothers encourage their children to play games or to go out of town on Sunday and consider their attendance at church scarcely worthy of consideration." New York Sun.

The Adventures OF HERCULES

ADVENTURE NO. 7. VICTORY OVER ANTAEUS.

A celebrated exploit of Hercules was the victory over Antaeus, Antaeus, the son of Terra, the Earth, was a mighty giant and wrestler whose strength was invincible so long as he remained in contact with his mother, Earth. He compelled all strangers who came to his country to wrestle with him, on condition that if conquered (as they all were), they should be put to death. Hercules encountered him, and finding that it was of no avail to throw him, for he always rose with renewed strength from every fall, he lifted him from the earth and strangled him in the air.

To be continued next Saturday evening. Sunday morning—children—remember, the boy or girl 13 years or under who comes to our shoe store first with the 9 adventures of the Hero Hercules will get a pair of our famous Hercules Shoes free. These shoes are noted for their strength, as was Hercules of old. Every pair guaranteed to be solid leather inside and out. They will stand the hard knocks the school boy and girl give them better than any other shoe at the price.

WEBER CLUB'S NEW BUILDING

Ground for the Beautiful Structure Is To Be Broken on Friday—J. P. O'Neill Awarded the Contract for Excavation and Foundation—There Will Be No Formal Program.

With every member of the Weber Club ready to handle one shovelful of dirt, the excavation for the new clubhouse will be started Friday afternoon at 1 o'clock. The civil authorities will also be invited to help break the ground. The contract for the excavation and the foundation work has been awarded to J. P. O'Neill and it is expected that this part of the construction will be completed during the winter. The contract for the building proper will not be awarded until after January 9, when the new administration of the club will be organized and seated. In view of the fact that the preparatory work of the clubhouse has been conducted under the supervision of the incumbent officers, they may lead to their re-election for another term. This, of course, must be decided by the vote of the club and it has been considered best by the building committee to wait until after the election before awarding the contract. There are to be no formal ceremonies on Friday afternoon and no program of speakers, has been arranged. It is probable, however, that some short talks will be given extemporaneously by the club leaders and the officials of the city. In breaking ground for the clubhouse on the day of the week which is usually associated with omens of misfortune, the club is taboos a superstition which still remains popular.

MOSQUITOES ARE KILLED

By Two New Methods Employed in the Hawaiian Islands

New York, Dec. 7.—Two new methods of exterminating mosquitoes which have been adopted with great success in Honolulu have been recommended by the New York health department by Ernest Mott Smith, secretary of the Territorial government, who is making his first visit to New York in five years. One of the new methods of combating the mosquito is by the use of gas. The other is the employment of mosquito fish. The first method, according to Mr. Smith, was discovered by accident. "We started using oil," he says, "but there was complaint that this galled the eyes of the fish. It was upon the use of calcium carbide. One day in cleaning his automobile lamps, he threw some of the calcium carbide into an old bucket in which were a lot of embryonic mosquitoes. The next morning he discovered that the wigglers were all dead. "He made some experiments and found that calcium carbide was almost as inexpensive as oil and more effective, so since then we have been killing mosquitoes by this method. They are little creatures from an inch and a half to two inches long. You can take a jar so black with wigglers that you cannot see through the water and put one of these fish into it and in half an hour there will not be a single wiggler outside the glass. The fish are as transparent as glass when empty, but after such a meal their bodies are black with the wigglers they have swallowed.

WHALEBONE AND ITS USES.

Whales may be divided into two well defined groups, the whalebone whales and the toothed whales. Of the latter the Irish shark is the sperm whale, the bottle nosed whale and the beaked whale. The former group, though toothless when adult, start life with rudimentary teeth. These are replaced by "a horny substance which grows from the upper jaw in long sheets of triangular plates." These are attached to the roof of the mouth and form that familiar article, whalebone. Some people, declares Dr. Scharff, still persist in believing that whalebone is made of whale's ribs, and others that it comes from the tail. The function of whalebone in the life of the whale is of primary importance. "The inner edges of the whalebone plates are frayed into innumerable hair-like processes, and the whole forms a sort of sieve by means of which the whale sifts out its food from the sea water. For the food of this gigantic creature consists chiefly of minute organisms, crustacea, mollusca, etc., floating near the surface. When the whale opens its mouth and moves along a great multitude of these find their way in. Then it closes its mouth and the water is strained out through

the whalebone sieve and the food is retained. The common uses of whalebone are known to every one, but Dr. Scharff mentions two which are probably not generally known. The fine internal fringes above mentioned are now employed in the making of barristers' wigs. They are light, and it is found that they retain the curl better than ordinary hair. Fine whalebone threads are also sometimes used to stiffen the tissue in high class silks. Other important use of the whale is in the production of oil. A full grown right whale may have a thickness of one foot of blubber beneath the skin, and a large specimen may yield 30 barrels of oil. Every particle of the carcasses of the whales captured in the Irish fisheries is utilized. And in addition to oil and whalebone, cattle food, guano and bone manure are obtained.—London Globe.

A HEBREW DICTIONARY.

It seems late in the day for the first appearance of an adequate dictionary of the Hebrew language. Yet up to now, says the American Hebrew, there has been no such work embracing all periods of the language. Biblical Hebrew has received almost exclusive attention from the lexiconographers. The Talmud is accessible in the dictionaries of Levy, Kohut and Jastrow. But for medieval and modern Hebrew nothing exists except isolated vocabularies on special lines. Above all, no attempt has been made to bring Bible, Talmud and modern Hebrew into one alphabet and treat the whole Hebrew language as a living organism with a recorded life of 3,000 years. This is now being attempted by Eliezer Ben Jehuda, who has prepared and is publishing a thesaurus of the Hebrew language of all times, which will run to twelve extensive volumes two of which have already appeared with commendable speed; so that there is every probability that the whole work will be concluded within a reasonable space of time. The author gives the meaning of each root in English, French and German, but naturally expounds the meaning and derivation of the word in Hebrew itself. His vocalization seems to be as extensive as could be wished for, covering all the works that can be reasonably regarded as within the living tradition of Hebrew speech, and sources and authorities are given for each word. Ben Jehuda, appropriately enough, lives in Jerusalem, and if enabled to complete his great work will have done a service to all Israel.

THE COTTON PICKING MACHINE

The machine itself is about as inspiring a sight as the gin was in the day of Whitney. It is a small gasoline traction engine, with two picking attachments swung under it and a pair of canvas bags hung out behind. It travels through the field about as fast as a man walks, taking the cotton plant between the wheels, where it is picked over by almost countless revolving discs of flint which catch the lint but leave the plant unharmed, so that the later bolls may mature. To leave the unripe bolls has been the great difficulty.

Piles! Piles! Piles!

Williams' Indian Pile Ointment will cure Bleed, Itching and Itching Piles. It soothes the tumor always itching at once, acts as a poultice, gives instant relief. Williams' Indian Pile Ointment is prepared by Dr. J. C. Williams of the private practice, Druggists, Mail Box 219, Williams Mfg. Co., Prop., Cleveland, Ohio. Dudson Pharmacy, Sole Agents.

FAVERSHAM

Supported by Miss Julie Opp and his company in The World and His Wife BY CHARLES FREDERIC NIRDLINGER NEW YORK TIMES: Creates a powerful spinal curer. A great play. DOROTHY DIX: Take the scandal-mongers to see "The World and His Wife." It will hold them for a while. SEATS NOW SELLING.

learned that his object was to place his services at my disposal. His doctor, he informed me, had ordered him to take a complete rest, or in any case to employ himself in some way that required absolutely no brain work. So he had decided to go upon the stage.—Charles Hawtree in the Strand Magazine.

Local merchants are warned by the postoffice officials to be on the outlook for money orders between the numbers 714 and 4800, inclusive. Blanks for such orders were stolen from the Willard postoffice on last Saturday night and it is expected that the thieves will endeavor to cash them in this vicinity. One and two-cent stamps were also stolen.

Mrs. A. A. McBride, her daughter Ruth and her mother, Mrs. Thomas O'Keefe, have gone to Ocean Park, Cal., for an extended visit. They expect to spend the winter there.

Supervisor G. E. Mains of Emmett, Idaho, having in charge the Payette forest, is in the city on detail work at the forest service offices. He will remain in Ogden a few weeks.

Forester E. A. Sherman has gone to Salmon City, Idaho, to attend to matters relating to the forest service. He will be gone until Sunday.

AIR BRAKE APPARATUS

Westinghouse Tells How the Idea Came to Him in 1867

New York, Dec. 7.—In his annual address to the American Society of Mechanical Engineers, George Westinghouse, president of the society, told last night how he invented the air-brake. "My first idea of braking apparatus was to be applied to all of the cars of a train came to me one day when a train, upon which I was a passenger, was delayed a couple of hours by a collision. My first notion was to connect the brake levers of each car to its draught, so that an application of the brakes to the locomotive, which would cause the cars to close up toward the engine, would thereby apply a braking force through the couplers and levers to the wheels of each car. The crudeness of this idea became apparent upon an attempt to devise an apparatus to carry the scheme into effect. "A while later, I read in a popular magazine of the tunneling of Mount Conto by machinery driven by compressed air conveyed through 3,000 feet of pipes. This convinced me that a brake apparatus could be operated by compressed air upon any length of train. I immediately started drawings of that apparatus and filed a caveat in 1867. "In Pittsburg I met Ralph Bagley, who volunteered to defray the cost of constructing the apparatus, and in 1868 a crude apparatus embodying my idea was put on a train of the old Panhandle railroad. On the very first run a horse and wagon were standing across the track when the train thundered out of the tunnel near the Union station in Pittsburg. The new brake averted an accident."

Metzger is at the Reed Hotel

With his wonderful Drugless Treatment, "Edisonia," theory developed by Metzger after years of study and experience, founded on scientific basis—originator of treatment. Now in Ogden. Declares if the body is whole, he can cure any functional trouble to which human being is the heir. Metzger desires to say to all who are contemplating taking a full course of Edisonia treatment, that the final opportunities to be enrolled for the course will be up to Saturday evening, Dec. 10th. As heretofore announced, Metzger's reason for traveling is to introduce Edisonia with the idea of establishing a national sanitarium. Let there be no misunderstanding. Offices will be maintained at the Reed Hotel for several weeks, completing all courses commenced, but during that time, after Saturday, no new patients will be enrolled, but the time will be taken to get the best results with those already listed. There will be no deviating from this rule. Do not imagine that you can come on Monday just as well, for if you do you will be disappointed. Office Hours, 1 to 6, and 7 to 9. Suite 301. Lady Agent, Consultation free

The FORTUNE HUNTER at the Orpheum tomorrow night.

SOCIETY LINCOLN CIRCLE.

Lincoln Circle No. 2, Ladies of the G. A. R., will meet at 2:30 o'clock sharp tomorrow afternoon at K of C hall.

All members of the circle are earnestly requested to be present, as matters of much importance are to be considered and acted upon.

LADIES' AID SOCIETY.

The Ladies' Aid Society of the Congregational church will hold an all-day meeting tomorrow at the home of Mrs. C. F. Conn, 813, Twenty-fifth street.

HORTON—BROWN.

A quiet wedding was held at the parsonage of Rev. P. A. Simpson in Salt Lake today, when Miss M. Lucille Horton of Salt Lake and W. E. Brown, Associated Press operator for The Ogden Standard, were united in the holy bonds of matrimony. Mrs. O. D. Day was bridesmaid and Mr. O. D. Day, best man. The bride is the daughter of J. C. Horton, traveling salesman for the Beer Liquor company, and Mrs. Horton, and has a host of warm friends in Salt Lake, while the groom is well known at various points in the west and equally favored with a long list of friends. He is the son of W. H. Brown, chief

TO OPEN UP THE KAIBAB FOREST

During the past summer the forest service department completed a survey of the Kaibab national forest in southern Utah and northern Arizona, for the purpose of estimating the available timber in that forest that could be disposed of for commercial purposes. The greatest object on the part of the forest officials has been to encourage the building of a railroad into that section.

Frank A. Dudley, representing the J. G. White interests of New York, has been negotiating with the government for this timber for a number of months, he having spent most of his time during the summer in this state and having personally gone over the forest. Mr. Dudley is a Niagara Falls man, and is thoroughly familiar with the manner of promoting large commercial enterprises, and it now appears that he is about to negotiate one of the largest railroad and reclamation projects of recent years in Utah.

Forester Graves has made a liberal offer of timber in the Kaibab forest to Mr. Dudley, and associates, and the general impression is that the offer will be accepted and that the construction of a railroad into the Arizona "strip" will soon be under way. A definite statement as to Mr. Graves' offer to Mr. Dudley cannot yet be learned, but it is estimated that the sale of not less than 450,000,000 feet of timber has been offered.

The timber is well worth the building of the road, but besides handling this large quantity of timber, a railroad would develop the semi-tropical Dixie land.

Assistant Forester Franklin Reed met with Mr. Dudley at Salt Lake yesterday afternoon and talked over the proposed sale of timber, but Mr. Reed is not prepared at this time to state just what understanding was had with Mr. Dudley. He states, however, that definite information will be received from Forester Graves within a short time, when it is more than likely the final details will be made public.

AUTOS ON THE OLD "PIKE."

A growing apprehension of the historical value of the old Cumberland road has induced the states through or less extensive repairs along the ancient thoroughfare. Pennsylvania is resurfacing her part of it, and many of the counties in Ohio and Indiana are doing what they can to mend the great highway, which in its day was by far the most important in this country. Hopes are entertained that the Federal government may be persuaded to cooperate with the states in a scheme for the reconstruction of the famous Pike all the way from Cumberland, Md., to its western terminus at St. Louis. Nearly 800 miles in length, and following an almost perfectly straight course from the Atlantic tidewater to the Mississippi river, it would furnish a magnificent pathway for automobiles.

If this shall be accomplished, with or without the help from Congress, the old road will again become a busy thoroughfare. Taverns will open hospitable doors at frequent intervals along its length as in the ancient days, and the echoes of the hills in the passes of the Allegheny mountains will be awakened by the cheerful honking of motor horns—just as in former times they responded to the pattering of the coach guards' trumpets. It would become the fashion for automobile parties to "do the Pike," the long straightway stretches of which would afford most attractive opportunities for speeding, while a trip over it in a gasoline car might well be deemed worth taking for the mere sake of the extraordinarily picturesque and beautiful scenery.—Technical World Magazine.

SWEATER COATS Most beautiful combination of color shown in Ogden for men and for boys. Prices range at \$1.00, \$1.25, \$1.50, on up to \$7.00. A new silk sleeve rest hold the attention now. Come see it. The Toggery Under Arlington Hotel.
