

**A Poor Place to Sleep.**  
 Traveling in Africa is doubtless becoming more dangerous than in any part of the world. Wild beasts, men, poisonous plants, storms, and other sickness combine to make a formidable array. A recent traveler in Gwallah, a district in northern Africa, encountered a new danger. The vegetation is very luxuriant, and when a pitched camp he noticed that a number of dead birds lay on the ground. Before he had time to connect this fact with the dogs, which had been smelling around, he fell over and died within five minutes. It was supposed that they had eaten the poisonous plant, but this idea was dispelled when three of the natives who had slept on the ground, found dead next morning. Then it was discovered that there was a stream of deadly gas covering the ground to the depth of three or four feet. The traveler with his troupe had no time in getting out of that vicinity.

**About Telephone Cable**

Telephone cable consists of a bundle of ten, twenty-five, fifty and on up to six hundred pairs of copper wires, each insulated in its own paper wrapper and the whole sheathed in a coating of lead. It ranges in thickness from the size of a broomstick to that of a man's upper arm.

Without cable the streets of the larger cities and many towns would be black with wires, but buried beneath the city's streets or running in a single aerial strand, the telephone cable is practically "out of sight."

In the Bell System there is in use nearly 7,000,000 miles of cables and more than 500,000 miles are added each year.

**DRUNKS WERE BROKE.**

Six drunks were arraigned before Mayor Will H. Cole in police court Wednesday morning. None of them were able to pay their assessed fines and they were all ordered to clear out and stay out.

More than four million tons of ore a year are expected to be exported from iron mines in Algeria by French capitalists who have obtained concessions after more than ten years of effort.

**THE TRUTH ABOUT OLIVE OIL**

Canned at the place of production in Italy

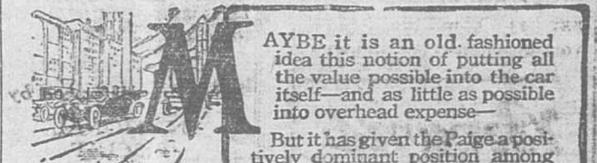

Spout arrangement fully patented. There are a number of "Pure" Olive Oils on the market to-day. All the pure olive oils, however, are not First Quality olive oils. Simply to know that you are buying an olive oil marked "pure" is not enough. The fact that an olive oil is pure does not necessarily imply that it is fit for human consumption. There are several different grades of olive oils, regardless of their purity. There is but one grade of olive oil that should ever be used for table use or for medicinal purposes; that is the first pressing of hand picked, carefully selected olives.

When you buy a can of OLIVESE, you secure the HIGHEST GRADE Olive Oil that can be had at any price.

"ALL THAT THE LABEL IMPLIES IS IN THE CAN."

**PAIGE**  
 Model Cleared "35"—Electric lighting and starting—\$1275  
 Model Brunswick "25" 5-passenger—Electric lighting and starting—\$975

MAYBE it is an old-fashioned idea this notion of putting all the value possible into the car itself—and as little as possible into overhead expense—

But it has given the Paige a positively dominant position among cars of medium price—

Ample capital for operating purposes—no bonded indebtedness—no excessive capitalization—no heavy overhead of any kind to be paid for.

Just a full dollar of car value for every dollar of the selling price.

Is it any wonder that the Paige is going to be oversold again this year in spite of increased production?
