Line-Loss in Tuberculosis

In the Journal of the American Medical Association (January 27, 1914) it has been many times stated that in tuberculosis an increased amount of calcium (lime) is lost, both in the urine and feces. In fact, a demineralization has been thought to be a forerunner of the development of tuberculous disease.

Always we have urged users of Eckman's Alternative to attend strictly to matters of food. In addition to rest and proper diet, some effective remedial agent seems to be needed, and in numerous cases of apparent recovery from tuberculous and kindred throat and bronchial affections Eckman's Alternative has supplied this need.

STOMACH MISERY QUICKLY VANISHES

Your money back if you want it is the way in which Wells-Haymaker Co., the popular druggists are selling Mi-o-na the great dyspepsia remedy. This is an unusual plan, but Mi-o-na has so much merit and is so almost invariably successful in relieving all forms of indigestion that they run but little risk in selling under a guarantee of this kind.

Do not be miserable or make your friends miserable with your dyspepsia. Mi-o-na will help you. If it doesn't tell Wells-Haymaker that you want your money back and they will cheerfully refund it.

A chance for the better will be seen from the first few doses of Mi-o-na and its continued use will soon start you on the road to perfect digestion and enjoyment of food.

Mi-o-na has been so uniformly successful that every box is sold under a positive guarantee to refund the money. If it does not relieve, what fair proposition could be made?

Wells-Haymaker give their personal guarantee of "money back if you want it" with every box of Mi-o-na that they sell. A guarantee like this speaks volumes for the merit of the remedy.—Advertisement.

HORSE INJURED

As a Result of the Absence of Warning Lights at Stealey Heights.

A fine driving horse owned and driven by R. E. Foust, of the Hazel Atlas Glass Company was severely cut about the legs when it became entangled in a wire cable stretched across the west end of Duff street at Stealey Heights, Tuesday evening.

The wire was only a few inches from the pavement and in the dark was not visible to the driver, there being no lights nor other indications that the street was closed which could be seen. The officials of the various corporations would do well to profit by the complaint made by Mr. Foust, thereby avoiding expensive damage suits which can be filed if carelessness, such as related herein, is allowed.

mission heard has its origin in the East and its greatest activity in the middle West, especially in the large cities where the pro-German element is considerable in numbers.

Members of the commission have made no secret of their annoyance and the wide spread activities of pro-German sympathizers nor of the belief that the agitation is inspired.

Officials of Wall street's big financial institutions heretofore classed as pro-German have no sympathy with these attacks. It became known, and are said to be in a receptive mood, towards participating in the flotation of the loan.

SUGGESTIONS TO FARMERS BY THE AGENT

Concerning the Curing of Hay and Filling the Silo, and Other Farm Matters.

(By W. D. Zinn, county agent, U. S. Department of Agriculture.)

The cow peas and soy beans may be cut anytime after blooming. The following method should be observed in curing the hay:

Cut the beans or peas down and let them lay on the ground three or four days, if it rains on them a time or two it will not damage them much, rake them up when they are damp with dew, leave them in windrow a day or two and then put them in tall slender shocks and leave them in shock two or three days.

Do not put the corn in the silo until it is fully ready to cut and put in shock.

When filling the silo see to it that the light and heavy silage is uniformly distributed. Keep the center of the silo full and well tramped. Cut the silage not longer than one-half inch, shorter will be better. Place some saw dust, cut weeds or grass on top of the silage. Make this covering from one to two feet thick. Unless the fodder is very dry use no water in filling the silo but turn on two or three barrels of water after the silo is filled and the silage covered.

Rye may be sown anytime between August 15 and November 15, but the best time is September. Sow two bushels per acre if sown for hay or to be turned down but where grass or clover is seeded with the rye one and one-half bushels per acre is sufficient.

It will pay on almost any kind of land to apply 200 pounds of acid phosphate per acre. If farmers fill a silo for the first time it will let me know by mail or phone about when they expect to fill it. I will visit as many as possible at that time.
