### MINERS WITH ASTHMA

are getting weaker every day, because tiny particles of dust that float through the air gradually choke the breathing tubes and finally affect the lungs.

For this reason every man who works in the mines should take a spoonful of Scott's Emulsion after meals, because it peculiarly benefits the breathing tract and soothes the irritated membranes, while its pure cod liver oil improves the blood, strengthens the throat and fortifies the lungs.

Scott's Emulsion is helping so many men suffering from Miners' Asthma that you should try it at once. It is Nature's strengthening food- tonic, free from alcohol or harmful drugs. Your druggist has it. Always insist on the genuine Scott's Emulsion.

Scott & Bowman, Bloomfield, N. J.

## LETTERS

Unclaimed at the Local Post-office Are Advertised by the Postmaster.

The following is a list of letters remaining unclaimed in the Clarksburg postoffice:

A. Abbott 2.

## AS A WOMAN SEES IT

By RHETA CHILDE DOBE.

Appropos of suffrage battles lost in Georgia this year, the children working in the cotton mills and other factories of Georgia will go on working for the present, the legislators having refused to provide for enforcement of the very mild child labor law passed last year.

Through desperately hard work done by the women's clubs, the suffragists, the child labor committee, the labor unions, and other friends of children, a law was squeezed through the Georgia legislature raising the working age of children from twelve to fourteen. The disgraceful exemption of those children whose parents "needed" the earnings of the little hands was made in the bill, and the law was one or two others. Still the majority of Georgia children were protected under the law, or they would have been had any adequate means provided for the law's enforcement.

The legislature charged the enforcement of the law on the state commissioner of commerce and labor, giving him two office assistants. In addition the commissioner was charged with the "collection, collation and dissemination of information and statistics concerning labor in its relation to capital, location and capacity; output of mills and factories; quantity of raw material used by them annually; location of a horsepower of valuable water powers, etc." When the commissioner had done all these things he was at liberty to go through the hundreds of mills and factories of the state and enforce the child labor law.

For years there has slumbered in the pigeon holes of some obscure committee of Congress a federal child labor law. It is a good law, and a deadly efficient one. It forbids interstate commerce in all goods made or packed or in any way manufactured, handled or sold by any child under fourteen years of age. The southern congressmen are very generally opposed to that bill. They say that it strikes a blow at the sacred doctrine of states rights.

So it does, and so does another bill that will be before Congress next year, the bill for a federal woman suffrage amendment. Both of these blows at the sacred doctrine of states rights will fall. Both bills will pass. Copyright, Evening Mail Syndicate, Inc.

## PUBLIC SERVICE TRAINING NEEDED

More and More is Assertion of Columbia University Professor in Address.

(BY ASSOCIATED PRESS)

CINCINNATI, Nov. 17.—The Association of Urban Universities in an annual convention here heard Professor Charles A. Beard, supervisor of the New York Training School for Public Service and professor of politics in Columbia University discuss the subject of "Training for Public Service." Prof. Beard declared the need for public service training was increasing far faster than the need was being met. Since the establishment of the New York Training School for Public Service, through the initiative of Mrs. E. H. Harriman, in 1911, there has been a widespread recognition of the movement by a number of universities, which Prof. Beard has summed up as follows:

"The University of Michigan led the way by the organization of a special program of studies in municipal administration opening immediately into the public service. The University of Texas, under the direction of Professor H. G. James, has also laid out carefully planned courses leading to the important branches of public service, such as those calling for training in law, engineering, sanitation and hygiene, education, finance and social science. Indiana University, in connection with the reference library at the capitol, which is under the able supervision of John A. Lapp, has made an important beginning by linking up academic discipline with practical training. Harvard University has made a special grouping of courses in municipal administration and allied subjects, which offers an ideal program for students contemplating a career in public service. In 1914, President Butler, of Columbia, appointed a large committee representing all of the various schools and charged it with the study of the

problems of public service in all of its relations to the university. That committee, of which I had the honor of being chairman, has reported recommendations that will no doubt carry weight in the formulation of future policies with regard to training for public service in that university. Minnesota University now has a committee which is making a similar study under the direction of Professor William A. Schaper. The College of the City of New York likewise has a committee on the relation of the college to the municipal service. The committee, under the chairmanship of Dr. F. E. Briethut, is making an intensive study of the civil service of Greater New York and will shortly report its findings to the president and trustees.

"For all these evidences of a quickened spirit, we should be truly grateful."

One handicap, however, which the movement met, was the refusal by some of the university authorities to grant credit toward an academic degree for field work in the study of public service. This was one of the things which the speaker deplored.

Setting forth what he believed to be the essential part of the program of those seeking to improve the public service by securing trained servants, Prof. Beard argued that a larger number of the exempt positions in civil service should be put on a merit basis; and that the residence qualifications as a requirement for admission to public service be abolished or seriously modified, thus widening the opportunities for careers in the public service by making it possible for able and devoted servants to move from city to city, or even from state to state.

"It is the function of politics," he said, "to determine what should be done, but it is the function of the trained experts to carry out the public will with all the instruments and methods which modern science, natural and social, can command."

## IRON ORE QUALITY FIGURES LARGELY

In Making United States World Leader in the Steel and Iron Industry.

(SPECIAL TO THE TELEGRAM)

WASHINGTON, Nov. 17.—The simple facts regarding the iron and steel industry in the United States are more fascinating than fiction and a true description of the methods and machinery which are in daily use for changing crude ore into the thousand and one finished forms in which iron and steel are used in our modern civilization reads like a fairy tale.

Few people realize how greatly the development of this colossal industry in our country has depended on water transportation. The fact that for years the United States has led the world in the manufacture of iron and steel is due, first of all, to the quantity and quality of the iron ores planned by nature in the Lake Superior region, and next, scarcely second in importance, to the cheap transportation for all ore which was, and is, furnished by the Great Lakes.

Exhibition and Lectures.

One of the most interesting special features of the twelfth annual convention of the National Rivers and Harbor Congress, which is to be held at this city on December 8, 9 and 10, will be the exhibition, accompanied by an explanatory lecture, of a remarkable series of moving pictures showing every step of the process from the time the ore is dug by steam shovels in Minnesota, out of vast open pits that are like the craters of dead volcanoes, until the finished product drops from the machines in Pennsylvania.

The first canal at the outlet of Lake Superior was opened to traffic sixty years ago last June. Since that time more than 900,000,000 tons of freight have been carried through this canal and its successors, and of this vast total more than 500,000,000 tons have been iron ore. Some of the ships that carry this ore can take fourteen thousand tons at a load, and the speed with which they can be loaded and unloaded is marvelous. On September 8, 1911, the Great Northern Ore Dock No. 4 put 19,529 net tons of ore into the steamer W. E. Corry in twenty-five minutes. On August 3, 1912, the P. A. B. Wiener came alongside a dock in Conneaut, O., with 11,913 net tons of ore in its hull. Two hours and fifty minutes later every ton of it had been taken out and put into cars for shipment to Pittsburgh.

Equal Development.

Special emphasis will be given at this convention to the fact that the greatest possible prosperity for our country can only be attained and maintained through the equal development and the harmonious co-operation of highways, railroads and

### GEORGE MORIARTY GETS HIS RELEASE

George Moriarty, captain of the Detroit American league baseball team, has been given his unconditional release by President F. E. Nevin. Moriarty is at his home in Woodstock, Ill. It is understood he has received several offers to manage minor league teams.

## Firestone Faith

The Firestone ideas of motor-ing are founded on a belief in the wisdom and common sense of the motorist—and this faith has been justified.

Firestone success has proven that the car owner wants safety, comfort and Most Miles per Dollar. He wants the quality that costs less to use.

The Non-Skid lettering is an imprint of safety. You need it always—but particularly at this time of year. It holds the standard for endurance and economy. The letters prevent spin or skid in any direction, they radiate the heat of road friction, insure perfect traction with gasoline economy, car-protection and maximum comfort. Everywhere experienced motorists praise Firestone performance.

	Case	Case	Case	Case
	Radial	Non-Skid	Non-Skid	Non-Skid
30x3 1/2	\$ 9.40	\$10.50	\$11.50	\$12.50

## NON-SKID TIRES

### FINDS GOLD.

SEATTLE, Wash., Nov. 17.—Tim Buckley, brother of a Seattle policeman, arrived from Rbby with \$20,000 in dust and nuggets. It was his first time out in thirteen years. He claimed to have taken out \$100,000 from a pay streak a mile long, of which he has worked only 400 feet during the four years since he staked it.

### DO YOU FEEL HEADACHY? LOOK TO YOUR STOMACH

It is an unusual thing for a druggist to sell medicine under a guarantee to refund money if it does not cure. Yet this is the way Wells and Haymaker, the popular druggists, are selling Mi-o-na, the standard dyspepsia remedy.

Never before have they had so large a number of customers tell them that a medicine has been successful as with Mi-o-na. People who a few months ago looked like walking skeletons have put on flesh and today are ruddy and vigorous with perfect digestion and good health.

There is no longer any need for anyone suffering or making their friends suffer on account of dyspepsia. Mi-o-na can always be relied upon. The percentage of cures is so great that there is little risk to Wells and Haymaker in guaranteeing to return money if the medicine does not relieve. And they stand ready to do so without any questions.

Headaches, all forms of indigestion, specks before the eyes, dizzy feelings, poor sleep, ringing in the ears and all forms of liver trouble are helped by Mi-o-na. A few days' treatment should show considerable gain in health while a complete cure often follows rapidly.

These days are the best in the whole year for the enjoyment of good health, and Mi-o-na will put you in such perfect condition that you can enjoy every minute of them.—Advertisement.

## The Smart Shop

Buy before the present stock is exhausted, as the unprecedented demand for furs has advanced prices which will affect all future orders.

### SHOOTS SKUNK

But Bullet Kills One of His Children and Wounds Another.

DOUGLASS, Ariz., Nov. 17.—Using a high powered rifle to kill a skunk prowling about his chicken coops at night, Fred Bommenschult, of Dos Cabezas, shot the animal, but the bullet also killed one of his children and wounded another. The bullet passed through the skunk, traversed the chicken house and penetrated the screen porch of the residence, killed the man's 7 year old son and wounded another child as they lay in bed.

England has a paper shortage.
