Climate and Crop Conditions.

A. G. McAdie, California section director of the climate and crop service of the Weather Bureau, makes the following report for the week ending Oct. 15:

The temperature has been nearly normal during the week, and in the northern part of the State conditions have been generally favorable for fruit raising. In the central and southern portions of the State, with considerable cloudiness, has prevailed, and has retarded this year. Light rain has fallen in nearly all sections of the State, and precipitation has occurred in Los Angeles and vicinity. No damage has been reported, and the fact that the rain of the past few days was so beneficial is estimated, as most of the driving front was stacked, and the weathering rains lessened the injury to grapes on the vines.

Fruit drying and raisin making are nearly completed, and the crops are generally of good quality, and the yield will be about the same as last season's in some places. The fact that the rain of the past few days is so beneficial is estimated, as most of the driving front was stacked, and the weathering rains lessened the injury to grapes on the vines.

The soil has been softened by the recent rains, and farmers are plowing and seeding, and preparations are being made for a large winter crop. The fact that the rain of the past few days is so beneficial is estimated, as most of the driving front was stacked, and the weathering rains lessened the injury to grapes on the vines.
