

WIRELESS TELEGRAPHY  
SUCCESSFUL IN NEW  
DIRECTION.

Transmits Portraits Without  
Aid of Any Connect-  
ing Medium.

Special Dispatch to The Call.  
NEW YORK, June 16.—You can have your picture taken now by wireless telegraphy.

You can have it waited through space on the crest of an electrical wave without the intervention of even a wire as a medium, and faithfully reproduced in a few moments for publication in your favorite newspaper.

You can even have your physiognomy hurried through an eight-inch brick wall with the speed of a series of lightning flashes and received in good condition for recognition on the far side of the wall without serious detriment to your cherished lineaments.

All this can be done, for the Herald has demonstrated it in a series of experiments, concluded yesterday, whereby it has successfully applied the principles of wireless telegraphy to accurate transmission from a point to point of portraits, sketches, maps and other pictures.

Portraits were yesterday transmitted from a room situated in a distant part of the Herald building through space and thence through a brick wall to the receiving instrument situated in a room of the Herald building, which The Call occupies as its office.

In the practical application of wireless telegraphy to the conveyance of intelligence the Herald and The Call have been pioneers in America ever since they utilized Signor Marconi's services in reporting the international yacht races two years ago.

With the recent announcement of the Herald's purpose to revolutionize maritime news-gathering by the establishment of a wireless telegraph reporting station on board the Nantucket wireless telegraph, some forty miles out at sea, interest in the fascinating subject has been renewed and further research into its possibilities and limitations has been stimulated.

These modern miracles were brought by the aid of an instrument much like a phonograph in size and appearance, which its inventor, E. A. Hummel of St. Paul, called a telegraph.

Its mechanism and method of operation were fully described at the time. Since then it has been practically utilized for transmitting to Boston illustrations of international yacht races and on many other occasions of general interest, but the possibility of utilizing it except in connection with a regular telegraphic wire circuit had not yet been demonstrated, and, indeed, was hardly conceived.

The same marvels of wireless telegraphy and the rapid strides made in its development, culminating in wireless reports of the international yacht races sent by Signor Marconi from a point at sea to the Herald, thence to The Call business office on Market street, with but one relay, via the wire of the Call's New York office in the Herald building.

It was an ingenious combination of the possibilities of wireless telegraph with the mechanical motor of a telegraph or picture telegraphing machine, which resulted in the marvelous joint application of the two devices witnessed in the Herald building yesterday.

W. J. Clark, general manager of the United States Electrical Supply Company, assisted by the Herald's electricians and telegraphers, conducted the experiments to a successful issue.

In addition to his exposition of the utility of wireless telegraphy in the transmission of pictures, Mr. Clark also demonstrated the feasibility of employing wireless telegraphy for the starting and stopping of trolley cars, the lighting and extinguishing of incandescent lamps from a distance and in the discharge of artillery by firing sparks by means of pushing a key with his thumb.

The circuit of the car was connected with a mechanical motor so that when the motor closed this circuit in response to electric waves generated from the transmitter, the car started or stopped as desired.

Electric incandescent lamps were next lighted or extinguished at 100 by pressing the key of a portable transmitter.

A far more startling possibility of warfare of the future is suggested, and it may not be an idle dream, Mr. Clark says, the time will come when by pushing a key, and releasing powerful electric waves from a wireless telegraph transmitter, the machine of a enemy's ship can be successfully exploded at sea.

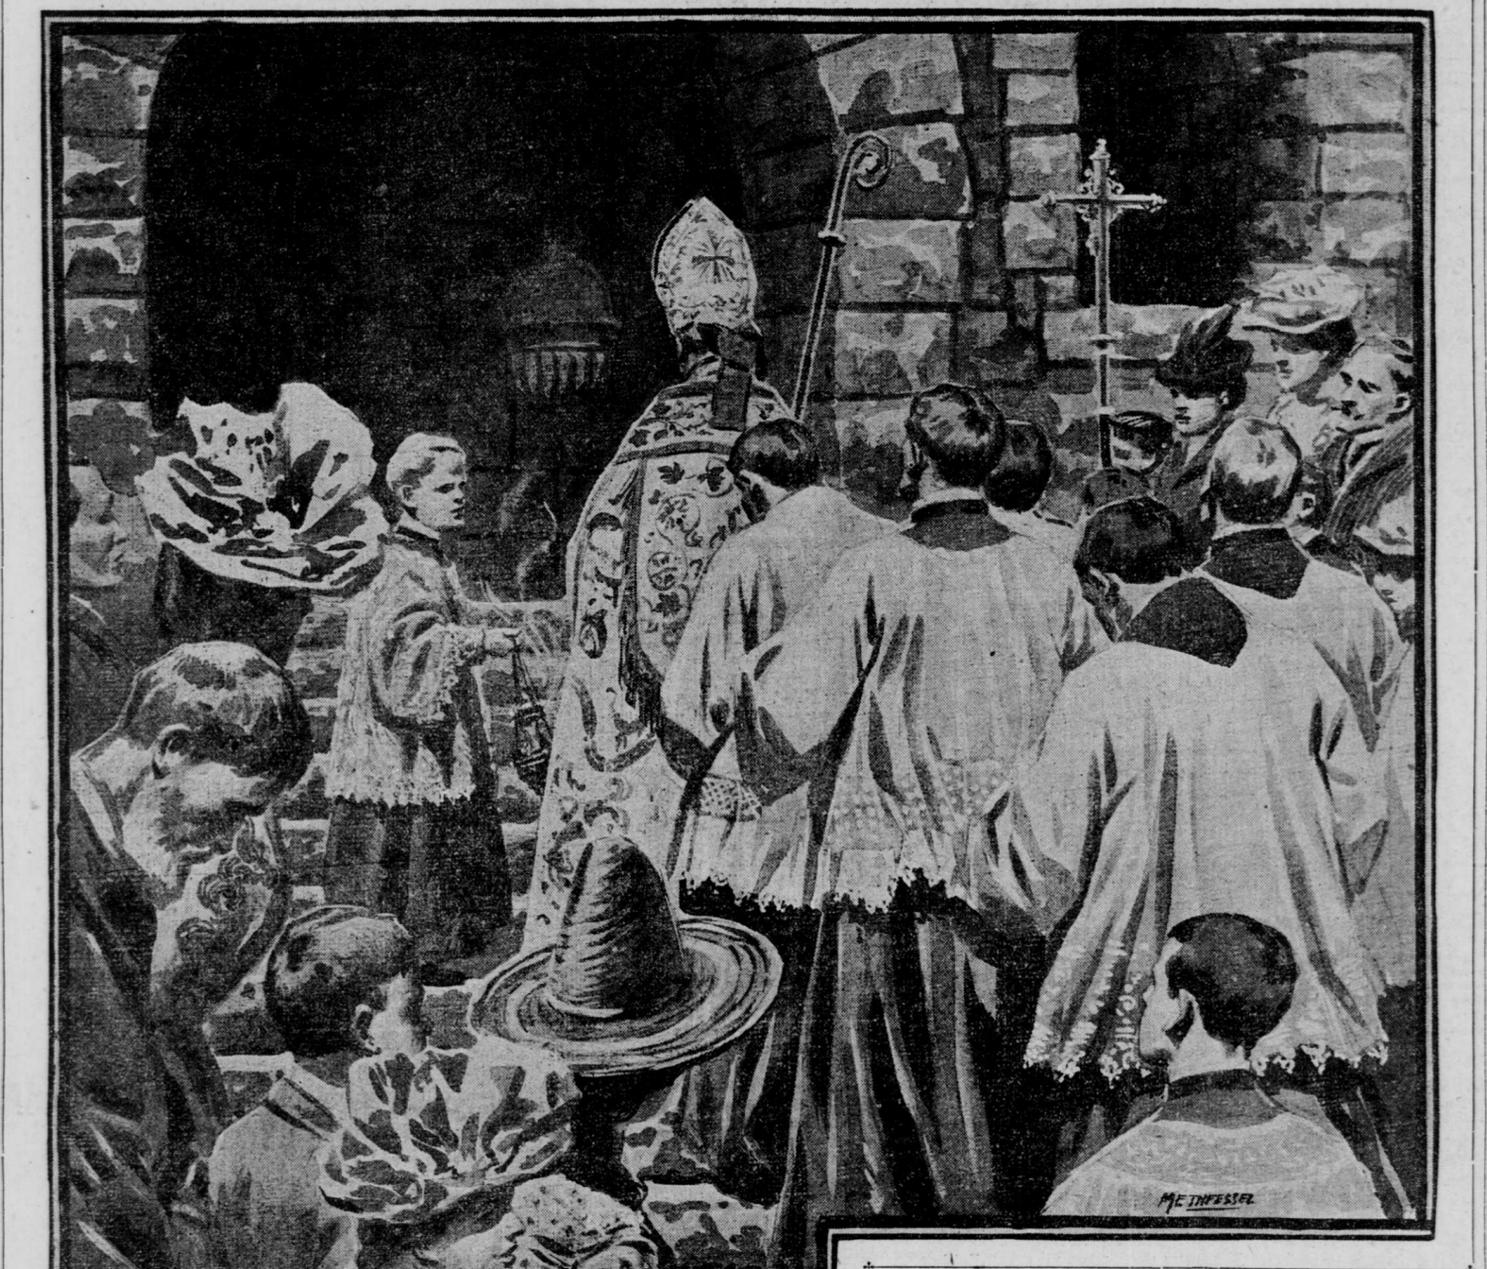

Communicates With the Shore.  
LONDON, June 16.—The steamship Lucania, the first of the Cunard vessels to be fitted with the Marconi system of wireless telegraphy, made communication with the shore when twenty miles from Liverpool.

Sons of Hermann Picnic.  
SAN RAFAEL, June 16.—The Sons of Hermann of San Francisco held their thirtieth annual picnic and outing at Schuetzen Park to-day. Two thousand people attended.

PRESTIS MOVE IN SOLEMN PROCESSION  
WHILE THE ARCHBISHOP BLESSES EDIFICE

Devout Worshipers Gather From the Towns and Fertile Valleys of Marin County and San Franciscans Journey Northward to Tomales to Witness the Very Impressive Ceremony at the Dedication of the Beautiful New Church of the Assumption

ARCHBISHOP RIORDAN IN SOLEMN PROCESSION OF CLERGY ENTERING NEW CHURCH OF THE ASSUMPTION AT TOMALES, DURING THE CEREMONY OF DEDICATION.

Tomales, June 16.—The beautiful new church of the Assumption was dedicated to-day with full and impressive ceremony by Archbishop Riordan. Solemn processions of priests between ranks of devout worshippers with bowed heads, swinging censers and the solemn blessing of walls and altars brought into this prosaic little town of the Marin county hills a touch of romantic medievalism that filled the hearts of simple and devout parishioners with religious fervor.

The procession moved down the aisle and back again while the Archbishop sprinkled holy water in blessing upon the side altars and the walls of the interior.

Upon the return of the procession to the main entrance the archbishop recited the prayers of the ritual, and the surplined priests moved up around the altar, the priests reciting the Psalms and the archbishop sprinkling the walls with holy water.

After the close of mass Archbishop Riordan delivered the dedicatory address. He said in part: "I must claim your indulgence for a few moments, although the hour is late and this ceremony has been long. I could not permit this congregation to depart without extending my heartfelt congratulations, both to the pastor and to the people of this parish, upon the completion of this magnificent church."

Archbishop Riordan delivered the dedicatory address. He said in part: "I must claim your indulgence for a few moments, although the hour is late and this ceremony has been long. I could not permit this congregation to depart without extending my heartfelt congratulations, both to the pastor and to the people of this parish, upon the completion of this magnificent church."

Next is the congregation, and I thank you also for this church. The pastor could not have builded it except for your generosity. But it should be remembered that this beautiful church and all the externals of our parish have no value except as they lead us to God, who is a sanctuary to be worshipped in spirit throughout the State.

The high altar of marble, one of the special glories of the new church, was the gift of Charles Martin, the Chileno Valley capitalist and rancher, as a memorial to his wife. Its cost was more than \$1000.

I could not permit this congregation to depart without extending my heartfelt congratulations, both to the pastor and to the people of this parish, upon the completion of this magnificent church."

FEELS EXHAUSTED. That your pastor has been able to build this church and not only does not feel exhausted, but on the contrary stands ready to undertake the building of another, is a cause for sincere congratulation.

The south transept window—the Sacred Heart of Christ—and the north transept window—the Sacred Heart of the Blessed Mother—are both rose windows. They were provided for in a bequest left by Mrs. Allen Griffin of Tomales.

Four art Gothic windows also adorn the transepts. They represent St. Matthew, St. Luke, St. Mark and St. John. The one representing St. Matthew was donated by Mrs. McGreevey; that of St. Luke by Owen Burns; that of St. Mark by Mrs. Fitzgerald; and that of St. John by Mrs. M. Callen.

Among those whose generosity made the erection of the new church possible are: Patrick Carroll, Charles Martin, E. J. Callen, Mrs. M. Callen, P. Roche and Mrs. Bloom.

MUSIC OF THE SERVICES.

The choir, specially organized for this occasion, consisted of the following: Miss Nellie O'Brien. It was composed as follows: Sopranos—Mrs. Clara McGowan, Mrs. Noonan, Miss Mollie McDermott, Miss Nellie O'Brien; Tenors—Dr. James E. Smith, Mrs. William Durham.

Organist—Miss Kate Byrne, Miss Cora McDermott, Miss Anna Grezler. Basses—William Morgan, George Connolly. Organist—Miss Kate Byrne, Miss Cora McDermott, Miss Anna Grezler.

Of the two side altars, the Blessed Virgin altar was donated by Mrs. C. A. Keys of Tomales. It is of Italian marble, and the front is handsomely carved in panels. St. Joseph's altar is likewise of marble from Italy, and is similarly decorated with handsome carving. It was donated by Mrs. S. McGreevey of San Francisco.

The handsome sanctuary lamp in solid silver, the work of a New York silversmith, was the gift of J. S. Phillips of Tomales. Its cost was \$250. It hangs from the stone arch above the sanctuary.

The stations of the cross were donated by Michael Kirk, the well-known attorney, and one of the oldest residents of Tomales. The stations are set in niches of the wall, with a gold mosaic as background. The cost of the gift was \$750.

The stained glass windows were all made in Munich. Their coloring is exquisite and the composition most excellent.

HURON WROUGHT  
SEVERAL HOMES AND MUCH  
FARM PROPERTY ARE  
DESTROYED.

Ten Persons Injured, Three  
of Whom Are Very  
Likely to Die.

HURON, S. D., June 16.—Ten persons were injured, three perhaps fatally, several houses were demolished, many cattle were killed and much farm property was destroyed by a tornado that struck at a point thirty miles from this city last night and swept for a considerable distance through the southeast corner of the county. Three inches of rain fell.

The injured are: Mr. McCormack, wife and three children; Mr. Gardner and wife and three unknown persons. The storm was preceded by a heavy downpour of rain and dense darkness. A balloon-shaped cloud suddenly formed, and in an instant the McCormack house, with the entire family, was picked up and carried several yards. The house was smashed into kindling and the family thrown against a barbed wire fence.

A schoolhouse a half-mile from the McCormack house was totally destroyed. The residence of Gardner, five miles from McCormack's, was next demolished. Gardner was injured slightly and his wife was severely hurt. The loss includes about all their household goods and much farm machinery. Further on the Palmer house was struck. One person was severely hurt and much property destroyed.

The Gillespie home was partly destroyed and two persons injured, one man having his leg broken. Other farmers suffered smaller losses. Many cattle and horses were killed by lightning.

SHOOTS THE STRANGER  
WHO BUMPS INTO HIM

Workingman in Stockton Resents an  
Accidental Collision and  
Opens Fire.

STOCKTON, June 16.—Donald E. Reede jostled J. W. Travis in passing him on the sidewalk this afternoon, and received a bullet from the man he bumped into. Travis was quickly arrested by Policeman Finnell and charged with assault on murder. Reede was taken to the Receiving Hospital and was treated for a wound in his left cheek. Both men belong to the working class and are strangers in this city.

Reede had been to the Red Men's picnic at Goodwater Grove and was returning to his lodging-house in the southern part of the city. He was somewhat tipsy after the picnic. As he was passing a saloon on Center square, Travis came out of the barroom and Reede struck heavily against him. Travis jumped back, pulled out a revolver and shot once. The bullet struck Reede near the point of the ear, and he ranged along the left jaw, coming out at the ear. Travis coolly put his gun in his pocket and returned to the saloon, where he called for another drink. He was arrested while swallowing the liquor.

DEATH CALLS KLONDIKE PIONEER.

TACOMA, June 16.—At Dawson on May 31 occurred the death from heart disease of Chris Sonnikson, who had resided in the Yukon mining camps for fifteen years. He leaves a wife and five children, living at Dawson, together with property valued at \$75,000. Sonnikson came to the United States when a boy from Denmark and lived for several years in San Francisco before he went to Juneau, about 1885.

Mrs. McKinley in Depressed Spirits.

WASHINGTON, June 16.—Mrs. McKinley's condition to-day continues about the same. The rainy weather of the past three days has had a depressing effect on her spirits, but she has been having no unfavorable developments.

Diseases and  
Weakness of  
MEN ONLY

THERE IS NO SUCH CONDITION AS weakness in a man under fifty years of age, other than general debility. Prematureness, loss of vitality, etc., are but symptoms of some disease of the reproductive system, caused by a contracted disorder or early distipation. In looking for the location of this damage we generally find an enlarged, swollen and inflamed prostate gland. As this gland is the very center of the reproductive system it can readily be understood that inflammation of it must cause disordered function. These cases are promptly benefited by proper treatment. The essential point in all of them is the necessity of the cure of the focus of the trouble in the prostate. Many men have unsuccessfully treated for a weakness and become discouraged, when, in an antiplostatic plan of treatment had been adopted instead of tonics, a cure would have been the result. In our experience there is no drug, the Pharmacopoeia, taken into the stomach, that will even benefit this class of cases. Our plan of treatment is entirely a local one, and most results are obtained, as indicated by increased circulation and return of natural vigor. Our colored chart, which we mail on application, is interesting to any one wishing to study the anatomy of the male.
