HOW TO COOK AND PREVENT DISEASES AT AUCTION!

Recommendations of the Sanitary Conference.

American Republics to Take Measures Against Fever and Plague.

WASHINGTON, Dec. 4.—The sanitary conference of American republics, which has been in session here since Tuesday, came to an end to-night. Santiago de Chile was selected as the place of the next meeting, which will occur March 15, 1904.

The mosquito came in for a good share of attention during the closing session and several resolutions bearing on the subject of infection were adopted. One of these, offered by Dr. Arthur H. Reynolds of Chicago, urged the different governments to study in their respective territories the geographical distribution of the mosquito...

The measure of prophylaxis against yellow fever shall be based on the fact that up to the present time the bite of certain mosquitoes is one of the most effective means of the propagation of the yellow fever; that the Governments represented in this conference approve the measures employed in Havana for the prevention of the spread of the disease on land for the isolation of cases and the fumigation of buildings...

A resolution was adopted reciting that typhoid fever and Asiatic cholera are caught by swallowing food or drink contaminated by the discharges of previous cases, and that the international sanitary bureau of the American republics for a report at the next meeting.

Whereas, the bubonic plague and other diseases are spread by rats, mice and other lower animals to a great extent and sustenance in animal and vegetable wastes commonly called garbage; therefore be it Resolved, That the garbage should be kept separately on the premises until it can be removed unmixed with anything else and destroyed.

A resolution was adopted reciting that typhoid fever and Asiatic cholera are caught by swallowing food or drink contaminated by the discharges of previous cases, and that the international sanitary bureau of the American republics for a report at the next meeting.
