Wonderful Progress. The census returns have brought out many facts that are astonishing the statisticians, and so much more surprising still to be the average thinker. Probably the most surprising fact developed by the census was the progress that the manufacture of clothing for men and boys had made. In the great city of New York, with its thousands of millions invested in manufacture, this branch of industry exceeds by a million and three-quarters that of any industry in the city; and all this has been accomplished in the space of ten years. In no country in the world can any similar rapid progress be shown in any branch of manufacturing that is dependent on its resources, unless it is absolutely a progressive industry.
