FROM THE PEOPLE.

Letter From a Distinguished Naval Authority on Our Coast Defenses.

The Bourbon Scheme for Pennington Inhuman Slave Catchers.

OUR COAST DEFENSES. Your admirable article of the twentieth in relation to our neglect to provide for our defense will meet with the approval of all thoughtful men, however little it may do so with those who throw back their heads and say, "We are the greatest people on earth, sir!"

Granted, if you choose, but is that a reason why we should not provide for our defense? What are the objects of a nation? Are they not to provide against external enemies; to provide against internal disorders; to establish a general economy whereby a people may enjoy the fruits of their labor in peace and prosperity?

In relation to your very plain statement as to our condition, and a criticism observed in an evening paper, it may be worth while to examine the laws of nations as expounded by Vattel, a book perhaps quite unknown to your commentators. On page 101 it is said: "Let us not proceed to a third division of the duties which a nation owes to itself—a third object of good government. One of the ends of political society is to defend itself with its combined strength against external assault or violence. If the society is not in a condition to repel an aggressor it is very imperfect—it is unequal to the principal object of its institution and can no longer subsist. The nation ought to put itself in such a state as to be able to repel and punish an enemy. This is an important duty which the law of nations imposes both on the state and its conductor."

"It is its strength alone that can enable a nation to repulse all aggressors, to secure its rights, and render itself respected and respected. It is called upon by every possible motive to neglect no circumstance that can tend to place it in this happy situation."

"The power of a nation is relative, and ought to be measured by that of its neighbors, or of all the nations from whom it has anything to fear. The state is sufficiently powerful when it is capable of causing itself to be respected and of repelling whoever would attack it."

Vattel will be entirely ignored by our enlightened congress and your ignorant critics. It is a delight in a food's paradise, but that will not meet the case when it arrives. He says: "But all this discussion of a naval attack on our seaboard assumes two improbabilities—a sudden outbreak of war and a failure on our part to secure it."

As a matter of fact, in case of a war, we could get all the ships and guns we wanted, and have what time was requisite to bring them here or where they would do the most good. The above hypothesis are wholly untrue. As an illustration of this, the fact will remember the Trent affair; it was "made amends without parley or suffer the penalty."

What assurance have we that a ransom will not be demanded by an enemy of our unprotected cities concurrent with a declaration of war, and that the ultimate result will be only to avert by an almost immediate compliance with whatever a powerful enemy may demand? It is as absurd to suppose that an enemy would give us warning, and thus enable us to make efforts of preparation as it is to believe that we could at such a moment secure a protective alliance.

Boasting of \$150,000,000 of revenue that may be thrown away, it is difficult to conceive anything more ignoble than to grudge whatever is necessary to our defense, and to insist on an advance to purchase a defender when danger arises.

Gen. Washington's advice that we should avoid entangling alliances is either unknown to or dismissed by your contemporary. He has the idea that a few ships purchased in haste, any day when the wind blows from the most good" would be all sufficient in addition to the alliance which the suggests could so readily be made. If desired, it should be made now, and styled by its proper name—a protectorate. Would you buy France as a protectorate, and have the power to order? Will you inform us under what neutrality laws we could be supplied with all that we require, and where the ships are to be found for sale when we require them?

If our legislators also dwell in a fool's paradise, let them consider what the late minister of foreign affairs of France said to one of their number: "But how about your defenses? Why, in the intelligence department of our war office we have a drawing of every military work of consequence on the whole American coast. With comments on their strength, and their is not a first-class fortification among them. Do you know how long it takes to build a first class modern gun?"

The American said he did not. Lacour said, in reply, "You are a whole year. It takes a whole year to shell and sack and lay under tribute while you are creating a navy, and how could you rebuild fortifications with 1,000,000 shells falling about the ears of the workmen?"

Be sure that your defenses are not a thoroughly well known and commented upon by every power in Europe that would gladly see you humbled, for, as I said, your property is a dangerous menace to all of them but France." KEIN MEHL, WASHINGTON, Feb. 21, 1884.

PROLIC AND FAMINE. To the Editor. The city of New Orleans is to-day holding high carnival. Thousands of soldiers are marching about in dress uniform, and the city is full of bands of music. Some of these bands are paid as much as \$500 for a day's work, and the city is in a state of excitement, from merriment to disgusting drunkenness. Alas! at the doors of these people the Mississippi is deluging the country, destroying homes and fortunes. Thousands of men, women, and children are crying to the necessities of life. The United States government will be compelled to keep starvation away from these people for the next two months, and they will furnish them with seed to plant for their next crop. Every city in this country will be and but little assistance to the necessities of these people. Yet the city of New Orleans, within sound of the appealing voices of its streets, gets drunk, and gives not one dollar to aid her nearest neighbors. J. A. D.

PENNINGTON SLAVE-CATCHERS AND OWNERS OF BLOOD HOUNDS. To the Editor. The pension bill over which there was such a struggle on Tuesday night in the house embraces some excellent features, particularly the pensioning of the soldiers who served in the Mexican war, but others which are abhorrent in their character. I have only time to notice one or two of the latter.

The bill proposes to pension any one who served thirty days or more in the Creek war or disturbances of 1835-'36, or in the Florida war with the Seminoles from 1835 to 1842. These were waged in the interests of the slaveholders to recover their fugitive slaves from the Creeks, Seminoles, &c. Especially was the state of Georgia interested in this war, and furnished large numbers of volunteers. She received at one time \$100,000 to pay her citizens for their slaves who had escaped to Florida, and subsequently a bill passed congress giving these claimants \$14,000 for the loss of their slaves. The soldiers who remained in bondage, and notwithstanding this, she insisted upon the prosecution of the war against the exiles, raised volunteers, and employed savages to do her savage work. Millions of money were expended by the government in this war, and it was accomplished. The best officers and soldiers of the regular army sent there were disgusted with the infamous work because it was a disgrace to the country and to the civilization of the age, and failing to conquer these exiles by the sword, would have other modes of warfare more foul and abhorrent were resorted to, viz. the employment of blood hounds from Cuba to hunt down the fugitives.

Under Gen. Jessup's advice and the urgent solicitation of the slaveholders, a Col. Fitzpatrick was sent to Cuba and obtained thirty-three blood hounds at a cost of \$150,720, when landed in Florida, in January, 1840. He also secured the services of a number of Spaniards who were accustomed to use the animals, which had been trained in the Spanish language, and with reasonable consent to the army of the United States the war was continued.

On the twenty-seventh of December, 1839 Henry A. Wise, of Virginia, by a resolution which he offered in the house, unseathed this diabolical scheme, which had been approved by a democratic administration, and its exposure to the country was one of the strong influences which caused the overwhelming defeat of the democratic party in 1840, and a vote to pension those blood-hound trainers, Indians, and Spaniards, engaged in catching fugitive slaves, as provided for in this democratic pension bill ought to overwhelm with infamy and defeat any northern man who votes for it. E. L. S.

REASONABLE IMPATIENCE. To the Editor. The republicans of the fourth congressional district of Alabama feel deeply interested in the contest between Judge George H. Craig and Hou. C. M. Shelby for a seat in the present congress, and are surprised that the principles of justice move so slowly. We were assured by the democracy that when they got in power justice should be administered without sale or delay, and yet, with one of the best law firms in Washington to attend to the case, it will establish the fact beyond a shadow of a doubt. Are our democratic friends about to sit in their ease and air the testimony? All we ask is a full, fair, and speedy trial. Judge Craig is a lawyer of acknowledged ability, a gentleman of education and fine standing. His opponent, the Hon. C. M. Shelby, is a member of the fourth Alabama district created more than twenty years ago, and was elected in the party since President Grant's first election. He received between 15,000 and 18,000 majority of votes for a seat in this congress. The evidence on file will establish the fact beyond a shadow of a doubt. Will not the true men of both sides do justice to the man who has been really wronged? SUBSCRIBER.

WILL VENEZUELA VINDICATE HERSELF. To the Editor. You would confer a favor on many solicitous subjects of this great government if you would stir up the pure mind of the department of state, by way of remembrance, touching that new commission which the United States and Venezuela were to organize for the purpose of adjudicating the claims of our citizens against the unjust claims of the government of Venezuela. An inquiry recently made of a subordinate of the state department elicited the response that it might be three years before any action was taken in the matter. It is surprising that Guzman Blanco's man Springer, knighted by the government of Venezuela, and published in 1876, was the basis of the resolution passed at the last session of congress, does not see to it that something is done by Venezuela, and done right speedily, to vindicate her character. We were told by her champion, Dr. Reylor, that the citizens of Venezuela was not only willing but anxious to be "undepicted awards." It begins to be feared that her anxiety has been so great that it has fatally paralyzed all her other faculties and powers. K.

A MINISTER IN LOWELL, MASS., has been obliged to give up teaching on account of trouble in his private life. Dr. Bull's Scotch Syrup he would have been a useful member of his profession.

WHAT MR. HEURICH THINKS. Opinion of a Prominent Brewer and Member of the Citizens' Protective League. Mr. Christian Heurich, the well known brewer, was asked by a REPUBLICAN reporter yesterday, concerning the organization of the citizens' protective league, and the temperance agitation in general.

Mr. Heurich said: "The protective league, as its name implies, is organized for the protection of American citizens. The temperance people are waging an aggressive war against the country, and are going to act on the defensive. The evils of drunkenness are many, and they are as old as history. As long as man exists the evil will prevail. I despise a drunkard as much as anyone, and am a true temperance man, but I do not mean a moralistic, moderate use of everything. The so-called temperance people cannot claim the word 'temperance,' because they are fanatics of the worst kind, and will not only confiscate your hard earned property, but will also deprive you of your rights." "You claim that the introduction of lager beer as a substitute for alcoholic liquors is in the interests of temperance?" asked the reporter.

"We claim," was the reply, "that the introduction and use of lager beer in this country has done more for real temperance than all those fanatics ever will or can accomplish. Look at the state of Maine, where not one brewer exists. Statistics show that there is more drunkenness there than in any of the other states. The prohibition does not prohibit. People in Europe can scarcely believe that in America we indulge in such nonsense as the so-called temperance reform. In Germany, where the wine and beer drunkness is almost unknown. A drunkard is a despised creature in that country. In these countries there are no temperance fanatics to shout before audiences and drink behind the door. Drunkenness is punished in both France and Germany. The so-called temperance people have had things their own way, so far. They are a well organized body all over the country. By their peculiar arrangement they present petitions to congress signed by people who live thousands of miles away from the cities, and they are going for some day the liberty-loving people of America will arise as one man and say to these temperance fanatics, 'Go no farther!'"

"Restaurant keepers," continued Mr. Heurich, "are respected as a class all over the world, except in the United States, and the suggestion made at a temperance meeting by certain reverend gentlemen to brand saloon keepers would surely degenerate and drive the best people out of the business. The idea of branding people, and expressing their contempt by the use of a black stain on the present enlightened generation. The license fee should not be increased. It would drive many men from the business who are disabled and unable to perform physical labor."

"The Citizens' Protective association regard the Sunday law?" queried the reporter.

"People will eat and drink on Sunday," was the reply, "and no law can deprive them of that privilege. Sunday laws cause more drunkenness than any other law. The reason is because when a man finds one place open he will drink until he is drunk. The true temperance advocates are beer and wine."

NORTHON injurious sneers into the composition of "Sweet Bouquet" Cigarettes. Gentlemen should try them.

For the Homeless Cases. The following names were drawn in the criminal court yesterday to complete the jury for the homicide cases soon to be called for trial: Levi Woodbury, Thomas H. Wiltberger, Thomas A. Watson, F. F. Mix, Charles Worthington, John Golden, and W. D. Wyvill. Messrs. Woodbury and Mix were returned on the list, and Mr. Wiltberger was reported as being on the grand jury. Judge Wylie did not examine them, and dismissed them until Wednesday, directing that three other names be drawn to fill the vacancies. The court said the reason for the withdrawal of Wiltberger's name should be entered, and added that a marshal informed him that it was not unusual for the same name to be drawn more than once from the same box. If this is so, the jury commissioners must act something like the district commissioners—independent of each other.

The clerk drew the following names to fill the vacancies: George Courtney, 213 E street northwest; George F. Stents, 1229 Fifth street northwest; and S. T. G. Morsell, 921 M street.

Give a Hard One Next Time. To the Editor. Will you kindly inform me how Schleich is pronounced? Please answer in Tuesday's issue. OMAHA.

As, as though spelled Skalki.

THE SCOURGE OF MANKIND.

A Few Reasons Adduced Why Consumption is so Fearfully Prevalent in This City.

Interviews With Prominent Physicians on the Cause of This Condition.

The alarming prevalence of consumption and other pulmonary diseases in this city, and the weekly presentation of the ratio of deaths from that cause, have combined to stir up considerable feeling in the matter to know the cause of this alarming mortality.

The following question was propounded to a number of physicians yesterday by a REPUBLICAN reporter: "What is the reason that lung diseases are so prevalent in Washington? The mortality statistics of the district show that deaths from consumption range from 20 to 35 per cent, while the mortality from all pulmonary diseases has ranged from 33 to 66 per cent of the total number of deaths?"

Dr. Harrison, deputy coroner, said: "The cause has no doubt been the changeable and damp weather. Pneumonia has been most prevalent, than any other pulmonary disease. I regard the increase as temporary, and a result of accidental causes. The winter has been an exceptional one here as well as elsewhere. Another cause of the increased mortality among pulmonary cases can be accounted for by the fact that advanced cases of consumption come here from the north, en route for Florida. Some of these cases die here. Another cause may be found in the fact that one-third of the population of Washington is composed of colored people, among whom the mortality is greater than among the whites. This is especially true of the mulattos, who are peculiarly prone to pulmonary diseases. I have no doubt that if the temporary increase in the death rate was analyzed it would be shown that it is confined largely to the above element of the population, and that it is one of the strongest arguments against immigration. Washington is a very healthy city, and the mortality from all causes is less than in any other city of its size. I am going to give Paris, Nice, and Rome for Washington."

Dr. Reylor said: "The increase in pulmonary diseases is due to the excessive use of moisture in the air. The weather has been cold and damp. The number of all respiratory diseases increases as you go up the Atlantic coast from similar causes. This season has been an exceptional one. The humidity has been very great, accompanied by cold blasts which are not permanent, it is climatic. For instance, during very hot weather, intestinal diseases prevail to a large extent. I think that the 'Potomac flats' improvements, when completed, will make this a very healthy city." In conclusion, Dr. Reylor said that the city and houses in Washington are saturated with moisture, and this city will soon be infested with malarial diseases. "We will be fortunate," he said, "to escape an epidemic of malarial fevers at the close of this damp spell."

Dr. S. J. Redcliffe said: "The climate of cases of pulmonary diseases has been among the colored people, especially the half-breeds. Consumption has almost been a scourge in certain parts of the United States during the past few years. Of the ninety-two persons who died from that disease in Washington during the month of January only 32 per cent were natives of this city. A great many people come here for a warmer climate, and die here. March and April are the trying months for consumptives. More of them die during those months than in all the rest of the year. This subject becomes interesting," he concluded, "when we take into consideration the modern theory that consumption is contagious."

Dr. E. A. Adams, of East Washington, said: "The excessive humidity and the very changeable weather of late I think account for the whole matter. Many people who came here for relief in previous years have failed to find it this year. The season has been phenomenal, and damp and oppressive weather has prevailed. The climate of the city is such that it is almost impossible to find relief. The excessive and continued cold and moist weather has tended largely to produce the results mentioned."

Several old citizens remarked that the winter of 1883-84 had been a most exceptional one. One of them said, "We have frequent hard frosts in one day during January and February."

It will be seen from the above interviews that the physicians quoted assume that the terrible mortality from consumption and other pulmonary diseases is a matter of recent occurrence. As a matter of fact Washington has had the terrible fame from its earliest history of being a favorite field for consumption. Any old resident can easily verify this statement from his memory of the mortality from pulmonary diseases in a matter of recent occurrence.
