

UNIVERSITY SCHOOL TO CO-OPERATE WITH BANKING HOUSES

(By Associated Press)
BLOOMINGTON, Ind., May 30.—Indiana university's new school of commerce and finance today announced a plan of co-operation with the Fletcher Savings and Trust company of Indianapolis, under which the Indianapolis business institution will become a laboratory for the study of modern banking and business methods by certain students. Dr. William A. Rawles, dean of the school of commerce and finance, said he hoped the development of the idea would make possible further expansion of the school into other lines of finance, industry and business, wherein students trained in the theory of business at the university might be given opportunity in undergraduate life to experience practical training as well.

Under the plan announced today, seven of the students in the school of commerce and finance, which now has an enrollment of approximately 300, will become employees of the Indianapolis trust company about June 1. In the case of five of the students, who are Juniors, the employment will continue only during the summer vacation, but in the case of two Seniors the employment probably will continue for a longer period. One of the Seniors is a girl, Miss Margaret K. Loflin of Bloomington.

The plan for direct co-operation between the school and the trust company was suggested some time ago by the trust company officials and is the first of the kind ever tried in Indiana on such an elaborate scale. It contemplates, Dr. Rawles said, the appearance of executives from the Fletcher Savings and Trust company's 18 departments, before the students of the school of commerce and finance during the next university year in a series of lectures on practical business methods.

Intricate Traffic Rules Displeasing to Shoppers

Evidence that the growth of a town into a big city does not always affect its trade favorably, is illustrated by the following story told by a local automobile dealer.

"I made a sale just the other day," he said, "to a man who had come to Richmond to shop for the first time. Traffic restrictions made necessary in another city, because of growth in population, had become bothersome to him, and he did not like to drive his car there."

"On the same day his wife, according to her statement, spent \$75 or more in the local stores, making the total amount spent in the city well over a thousand dollars. They both told me that they were not the only ones who had decided to come to Richmond to trade after this, because it was easier to get about the town."

"I could never have sold the machine, had he not started to come here to trade, as otherwise he would have bought all of his goods in the other city."

Italy has 4,800,000 lemon trees, which produce 1,260,000,000 lemons per annum.

DETECTIVE AGENCY OPENS OFFICE IN RICHMOND

Civil, Criminal and Industrial Investigating Bureau

G. R. Boval, President of the Boval Detective Agency of Dayton, Ohio, has opened an office in the Odd Fellows' Building and will occupy room 51. Mr. Boval will have a crew of men in his employ who are experienced in Secret Service in all branches, financial, industrial, commercial, civil and criminal investigation and special guards. Everything will be held strictly confidential. Mr. Boval asks that if anyone is interested to please call at office or Phone 1215 for private consultation.—Advertisement.

RADIO NEWS

Palladium Government Call is 9 ZAE — Fred Clark, Operator

Production of rain by radio is a recent suggestion of Marconi. He believes it possible to produce rain by electrical disturbance, and points to the fact that showers are often experienced in summer after a bolt of lightning.

Movies by Radio

Many amateurs have been interested lately in the announcement by Francis Jenkins of Washington, formerly of Richmond, that he has discovered a method of transmitting motion pictures by radio. This is a further development of the discovery some months ago, that photographs could be transmitted by wireless as they already had been transmitted by telegraph. The newest development forecasts the central movie with its program broadcasted for the benefit of all within a certain radius.

New Richmond Phone

Regular distance work is being conducted by Gerard Harrington, who has recently installed his new continuous wave and telephone set and has been securing very good results from it. This is the fifth telephone set to be established in Richmond. Harrington's set is of the same design practically as the set operated by Walter Schultz, which was heard in the Hawaiian islands.

Hess Offers Aid.

Local amateurs and novices also, as listeners who do no transmitting are called, will welcome the offer of co-operation made Monday by D. C. Hess, manager of the light and power plant.

Mr. Hess requests all who expect to erect antennae near the light or power lines to call upon him for consultation so that the best, safest and most satisfactory method of installing the aerial, may be planned.

The plant manager warns against careless installations, which through faulty position of the aerial, in relation to the power lines, not only may result in unsatisfactory noises, but also may be a source of danger and possibly loss of the set, as if wires come loose and touch the lines, they may short circuit through the set.

Erection of aerials which are attached to power line poles also involves danger for the amateur, as he must climb through high voltage lines.

POZ on Short Wave Set.
Charles Emrick of Eaton, experienced a sensation recently, when during one of the entertainment broadcasts on 360 meters to which he was listening, the broadcast station suddenly faded out and he heard POZ finish a message and sign off. This was immediately followed by two or three long wave stations.

Investigation disclosed the fact that the detector bulb filament had burned out and fallen over against the grid. The short circuit had put the transformer in circuit with the ground and antennae, making a perfect hook-up for a long wave receiver, exactly attuned to the stations which were heard.

New Eaton Set.
Fred Miles, of the Miles Battery Station, is building two new sets, one

for a long and one for a short wave, both with simple circuits.

Copp Licensed.
Warren Copp of West Alexandria has received his license and is ready to make full use of his new set.

Radio Weather Forecasts.

The use of radio in reporting weather observations from distant or isolated stations, and especially from ships on the ocean has been of immense importance in improving the forecasts according to the weather bureau. It is possible by these more numerous and frequent rapid observations, to check up the forecasts more closely, making them far more accurate and detailed.

The information as fast as compiled, is broadcasted through the weather broadcasting stations, of which 80 have been established, thus making it available to all the nations within the shortest possible time.

Arrangements have been made by

the U. S. Weather Bureau, to interchange reports from this country and Canada with Europe, receiving European observations in return. It is possible already through stations in communication with Washington, to chart reports in Washington by 11 o'clock, that have been taken in Japan, China and the Philippines at 8 o'clock the same morning.

Arctic Weather Reports

Another activity of the weather bureau is in co-operating with the Arctic expedition to receive from it reports on northern weather conditions. The bureau believes that conditions there have an influence on our own weather, and the observations will be compared to find what this influence is.

TO GIVE SCHOLARSHIP

EVANSVILLE, May 29.—A graduate of Evansville high schools will receive a scholarship to the Indiana State Normal school at Terre Haute, according

to H. K. Hemmer, superintendent of schools in Vanderburgh county. The selection will be made early in June.
