

ELLIOTT TO TAKE UP CASE OF VETERAN, VICTIM OF SHOCK

The case of Charles Joseph Bartlett, University of Pennsylvania graduate, veteran of the World war and a native of Belleville, Ill., who is at Reid Memorial hospital suffering from the effects of shell shock, will be taken up through the British embassy at Washington by Rep. R. N. Elliott, it was announced Friday. Bartlett is being cared for under the direction of Harry Ray Post, American Legion.

Bartlett is subject to periodic attacks of nervousness as the result of injuries sustained in the war. He entered the police station Thursday evening and asked for help. While there he became so ill that he was removed to the hospital on recommendation of Dr. W. G. Huffman, city physician, who was called by Ray Weisbrod, member of the American Legion and Veterans of Foreign Wars. Reports from the hospital Friday were that Bartlett was extremely nervous and would have to be kept in bed for several days at least.

Bartlett is an educated man, about 30 years of age. He was penniless when he struck Richmond Thursday. According to his service record, he enlisted with the Royal Fusiliers Oct. 5, 1914, and served four and one-half years, and was discharged as unfit for service May 1, 1919. He was regimental sergeant-major of the Coldstream Guards when discharged.

Although he received a pension when he left the army, it was withdrawn about two years ago, he said. His last help from the British government came in October, 1920.

Efforts will be made by Congressman Elliott to have Bartlett's name placed on the pension list once more. The case will be taken up through the British embassy at Washington.

Bartlett claims he had no relatives except a brother, who was killed while serving in the American army in the Argonne.

Democratic Men, Women To Meet at Cambridge

Both men and women voters will attend a meeting of Democratic voters of western Wayne county to be held at Cambridge City Friday evening, starting at 7:30 o'clock. Frank McFall, county chairman, will attend the meeting with a number of Democratic workers from this city.

Robert Watt Graduates From Technology Institute

Robert H. Watt, son of Mr. and Mrs. Frank N. Watt, 69 South Fifteenth street, was graduated Friday morning at Carnegie Institute of Technology, Pittsburgh, with a degree of Bachelor of Science in mechanical engineering, college of engineering.

The graduating class numbered 365, one of the largest in the history of the institution. The speaker at the commencement exercises was Dr. John Huston Finley, an editor of the New York Times, and formerly New York state commissioner of education.

Mr. Watt graduated from the Richmond high school in 1917 after which he spent a year in Earlham. At the time of the S. A. T. C. he was enrolled in this service at Miami university at Oxford, Ohio, but when the unit there was disbanded after the signing of the armistice, he completed the year's school work at Earlham. He has spent the last three years in Carnegie Institute. Watt will drive home and probably will arrive in Richmond Saturday night or Sunday.

CORNS

Lift Off with Fingers

Doesn't hurt a bit! Drop a little "Freezone" on an aching corn, instantly that corn stops hurting, then shortly you lift it right off with fingers. Truly!

Your druggist sells a tiny bottle of "Freezone" for a few cents, sufficient to remove every hard corn, soft corn, or corn between the toes, and the callouses, without soreness or irritation. —Advertisement.

Uncle Sam's Junk Business

By FREDERIC J. HASKIN

WASHINGTON, D. C., June 16.—America's real work in the naval disarmament program is being started in earnest. The conference itself is history and the men who reduced to writing the agreements are engaged in other affairs. The actual scrapping of the ships of war is just beginning. It is a job which is making the United States the seat of the biggest junk industry the world ever has known.

Dismantling a battleship is a task second only to building one. A battleship is designed to withstand destruction. In war it is its function to endure the pounding of the heaviest shells which the ingenuity of man has invented, to say nothing of the pounding of the seas. And now, under the disarmament treaties, a whole fleet is to be destroyed.

Practically all of the work is to be done in private yards of junk men or shipbuilders. A Philadelphia firm made the government a proposal to take over the entire fleet scrapped by the treaty, but as a matter of public policy it was decided not to give the entire job to one company. However, this company has obtained the job of scrapping several battleships and a number of smaller vessels. Among the important warships to be scrapped at Philadelphia are the battleships Missouri, Wisconsin and Maine, the cruiser Columbia, the cruiser Raleigh, which was with Admiral Dewey at Manila Bay, and the Monitor Monterey. The junk company's yard is on the waterfront and it now is dredging a channel deep enough to receive these great ships.

The most useful implement in the destruction of an armor-clad battleship is the oxy-acetylene torch. This is a device which shoots a flame of extremely high temperature into a mass of steel and cuts it as a knife cuts bread. These torches are used in cutting the huge armor plates into commercial shapes and sizes. The pneumatic drill and the chisel are used in the dismembering of lighter parts, and a ponderous hammer—something between a trip-hammer and a pile-driver—is used to crush and break up large blocks of metal into smaller, more workable chunks.

Material for Automobiles
Battleships are made of the best quality of material and therefore have a large value as junk. Armor plate is made of the finest nickel steel. This is cut into billets and sold to automob-

bile manufacturers who remake the material into engines, springs and other parts requiring great strength. The heavy machinery used in operating gun turrets is sold to manufacturers of farming implements or to iron foundries. There is much copper, brass, gun-metal, bronze, lead, zinc and manganese on a battleship. These are all used in shipbuilding as well as in other lines of manufacturing. When taken from the battleship they are sorted and sold to dealers or direct to manufacturers.

All the material is as carefully sorted and graded as new metal. It is stacked in neat piles and classified by shapes and sizes. Experience has taught the junkmen the best forms in which to convert their materials to attract buyers and the big modern junkyard looks more like a department store than the ordinary backyard junk piles of small dealers. To make the required sizes, crocodile shears are used. These have jaws which cut with a ten-ton pressure. Also, tangled fragments of lighter material are pressed into blocks in a sort of mould on which an enormous pressure is exerted.

While great fighting ships of the navy will be reduced absolutely to scrap some of the lesser craft will be dismantled only so far as fighting equipment is concerned. The hulls will be used for merchant ships new interior arrangements being effected to make them suitable for the carrying of cargo. Three old destroyers, the Truxton, the Worden and the Whipple, which were retired some time ago, have been rebuilt as merchant ships and now ply in the fruit trade between the United States and tropical America. Many of the destroyers are fast, oil-burning ships and are easily susceptible of conversion into passenger or cargo ships.

A modern battleship costs \$30,000,000 or more; as junk it brings not more than one-hundredth part of that sum. The battleship Maine was bid in as junk for \$48,000. There are not many persons or companies who are in the market for secondhand battleships and the buyer must regard as

part of the price he pays the enormous cost of the wrecking. While the seller of the second-hand fighting ships gets little in proportion to original cost, the ultimate cost to the junkman is many times what he pays for the complete vessel. Almost as many men are required to take a ship apart as to put one together.

More than half a million tons of the American navy are being scrapped under the disarmament treaty and the junk is to be handled in such a way that many people will ride in automobiles, sail in ships, use electrical appliances and use tools which formerly constituted parts of the great ships.

Other Junking Enterprises
It is the greatest and most spectacular junking enterprise which has followed the war but there are many others. The government bought a tremendous quantity of material of all sorts and built many buildings especially for war use. Many of these are all being scrapped. In every big city in the country can be found important evidences of this vast industry which was so much stimulated by the war.

Washington is a typical example. A business man purchased or leased a portion of Camp Meigs, the temporary camp where the war garrison of Washington was quartered. Using the camp as a junk yard, he proceeded to scrap the camp buildings as well as other temporary buildings erected in Washington in the emergency of war. In such deals, the purchaser at second hand of a building takes everything in it—lumber, bricks, steel, plumbing, lighting fixtures and all other materials which go to make up a house. This results in the accumulation of stock for a sort of department store of the building trade. Builders can find in such yards almost anything in the way of materials for any sort of building.

This industry is thriving in many cities, especially those near which great army camps were located during the war. The process of reducing to

workable material and selling to the public for peaceful purposes the ships, buildings and many other objects used is going on constantly and will continue for some years before all the war material will be absorbed. Many people will be using, unconsciously, in automobile, house, knife and fork at table, or almost any other conceivable object, some souvenir.

The process of destruction and junking goes on always but is accentuated by war because then it is accelerated. John Stuart Mill, the eminent English economist, pointed out that every five years practically the whole tangible wealth of a nation is destroyed. More buildings are torn down every month, in peaceful processes of improvement, in many American cities, than were shelled down at the siege of Antwerp. Last year's wheat crop is totally destroyed. Nearly all of last year's cotton is consumed or soon will be. The destruction of war is more spectacular and therefore regarded as more disastrous, but in an economic sense, the loss is not greatly different from the ordinary peace-time destruction deliberately undertaken as a measure of progress.

Use of Air Guns In City Prohibited, Says Eversman

"Use of air guns within the city limits is prohibited by city ordinance, and is punishable by a fine of \$1 and costs," said Chief of Police Eversman Friday. Two boys were lectured at the city hall after they had been brought in on complaint of the neighbors, who said they were using the guns too much.
