

THE GOOD JUDGE SEES HAPPINESS PERSONIFIED

**SMILES** like a basket of chips since he started using the *Real Tobacco Chew*. Fact is, men take to the little chew that satisfies like a duck takes to water—and how they talk about its goodness to each other.

A little chew of pure, rich, mellow tobacco—seasoned and sweetened just enough—cuts out so much of the grinding and spitting.

THE REAL TOBACCO CHEW IS NOW CUT TWO WAYS!!  
W-D CUT IS LONG SHRED. RIGHT-CUT IS SHORT SHRED.

Take less than one-quarter the old size chew. It will be more satisfying than a mouthful of ordinary tobacco. Just take a nibble of it until you find the strength chew that suits you, then see how easily and evenly the real tobacco taste comes, how it satisfies, how much less you have to spit, how few chews you take to be tobacco satisfied. That's why it is *The Real Tobacco Chew*. That's why it costs less in the end. The taste of pure, rich tobacco does not need to be covered up. An excess of licorice and sweetening makes you spit too much.

Notice how the salt brings out the rich tobacco taste.

#### PINEWOOD

Carl Meland returned Friday from Derick, N. D., where he has been the past few months.

S. M. Nelson sold his farm to M. Eastman of Waterloo, Iowa. The deal was made on Wednesday of last week.

Miss Marie Helgeson of Aure and Walter Johnson of Solway were married at the latter's home Saturday. The wedding dance was held in the hall near Scribner.

Among the persons from Solway who spent Sunday at Little Buzzle fishing were Mr. and Mrs. Nels Bye, Mr. and Mrs. Powers, the Misses Daniels and Campbell and Olaf Goldberg.

Charles Moller came home Friday to spend a few days.

A daughter was born to Mr. and

Mrs. A. K. Lockrem on Thursday of last week.

C. Hynes and O. Negaard were Bemidji callers Saturday.

A large crowd of young people from the surrounding country attended the wedding dance near Scribner.

On Friday last fire destroyed about one hundred and fifty cords of wood belonging to Herb Dodge. It is supposed the fire was caused by brush fires.

Nels Bye of Solway was a Pine-wood visitor Thursday.

Mr. and Mrs. W. W. Ward of Fertile arrived here Sunday. They will spend a few days here while Mr. Ward transacts business.

Miss Charlotte Bye left Sunday for Solway where she will spend a few weeks with her uncle, Nels Bye.

## PLANTING TREES AND SHRUBS

Federal Experts Give Advice For Various Localities.

WIDE RANGE OF CHOICE.

The Country Is Divided Into Five Sections and Suitable Varieties Are Suggested For the Various Divisions. Beauty of Shade Trees Depends Upon Normal Growth.

"What kind of trees shall we plant to beautify our grounds? What shrubs would be suited to our schoolyard?" asked a specialist in trees and shrubs of the department of agriculture.

The department specialists have prepared a list of trees and shrubs suited for general use in private grounds, streets, private parks and schoolyards for each of five general divisions of the United States. The divisions are:

First—New England states, New York, Pennsylvania, New Jersey, Ohio, West Virginia, Kentucky, Indiana, Michigan, Illinois, Missouri and Iowa.  
Second—Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Tennessee, Florida, Alabama, Mississippi, Louisiana, Arkansas, Oklahoma and Texas.

Third—Wisconsin, Minnesota, North Dakota, South Dakota, Nebraska, Kansas, Colorado, Wyoming, Montana and Idaho.

Fourth—New Mexico, Arizona, Utah, Nevada, western Texas, western Oklahoma and western Kansas.

Fifth—California, Oregon and Washington.

The specialists suggest in district No. 1, which includes New York and adjoining states, the following: Deciduous trees—Red oak, white oak, pin oak, American linden, American white elm, white ash, scarlet maple, sugar maple, green ash, Norway maple. Evergreens—White spruce, white pine, Scotch pine, hemlock, balsam fir, Colorado blue spruce. Shrubs—Lilacs, viburnums, philadelphuses, hydrangeas, Japan quince, flowering currant, cornus, spiraea, weigela, coralberry, snowberry, bush honeysuckle, wild roses, rugosa bush, Thunberg's barberry, corylanthus, Regel's privet, elders, sweet pepper bush.

In district No. 2, which includes Delaware and the southern states as far west as Texas, the department would plant the following: Deciduous trees—Tulip, sycamore, pin oak, white oak, black oak, live oak, red oak, white ash, bald cypress, Norway maple, red elm, American white elm. Kentucky coffee. American linden, catalpa, liquidambar hackberry, sour gum and southern section willow oak and laurel oak. Evergreen trees—Long leaf pine, magnolia, live oak, cedar of Lebanon. Shrubs—Golden bell, hydrangeas, lilac, cleome, lonicera, hibiscus, roses, Japan quince, calycanthus, smoke tree and viburnums, philadelphuses, cornus, jasminums, spiraea, weigela, coralberry, snowberry, Thunberg's barberry, crape myrtle, privets, hollies, evergreen, barberries, elders, rose of Sharon. South of Charleston, S. C.: Camellia japonica oleander.

"The beauty of a shade tree depends upon its normal and symmetrical growth," says a department official. "In order to insure this, before planting cut off the ends of all broken or mutilated roots; remove all side branches save upon evergreens, so that a straight whiplike stalk alone remains. Dig holes at least three feet in diameter and two feet deep in good soil and make them four feet across in poor soil. The sides of holes should be perpendicular and the bottom flat. Break up soil in the bottom of hole to the depth of the length of a spade blade. Place twelve or fifteen inches of good top soil in the bottom of the hole and use the fine top soil, free from soda or other decomposing organic matter, about the tree roots. On top of this bottom layer place the roots of the tree, spread them as evenly as possible over the earth, put in and cover with two or three inches of fine top soil. Tramp firmly with the feet and fill the hole with good earth, leaving the surface loose and a little higher than the surface of the surrounding soil. When the work of planting is completed the tree should stand about two inches deeper than it stood in the nursery.

"In order to insure symmetry of growth trees must be allowed unrestricted area for development. At least forty feet should be allowed between trees intended to occupy the ground permanently. Quick growing nurse or temporary trees may be planted between the long lived ones to produce immediate results, but as these are seldom removed as soon as they should be to prevent interference with the development of the permanent plantations the practice is not to be recommended."

Shower Baths For City Horses. Shower baths have been provided for horses in certain of the larger cities through the kindness of the humane societies. Arrangements have been made with the municipal fire departments by which the societies are allowed to tap the fire plugs and attach hose and spray, so that teamsters and others may give their steeds a bath by merely halting for a moment and turning on the spray. Water for drinking purposes may also be drawn.
