We have some nice chrysanthemums, some grown, at the Green house, come and get them fresh. 1242 Doud avenue. Phone 166 2t 10 24

ABILITIES THAT ARE LATENT

Few Realize to the Fullest Extent the Intellectual Powers They Have at Command.

How many times have you been forced to undertake some piece of work which you did not believe you could perform, only to find yourself agreeably surprised at the creditable way in which you finally accomplished it? You discovered latent abilities which only come to light through the driving force of necessity. There is no doubt we all have possibilities which we do not suspect. All that is needed to develop them is self confidence and initiative.

Many people never succeed because they never try. They lack faith in themselves. The habit of saying "I can't" is an easy one to acquire, and it grows stronger with time, but it does not tend to accomplishment. It does not put our faculties to work to overcome the perplexities of the job which confronts us. Many people feel that unless they can solve some problem easily they lack the ability to do it at all. They do not realize that the performance of anything worth while requires much hard work and hard thinking.

Don't allow yourself to become conceited or to get into an overconfident frame of mind in regard to your ability, but nevertheless do not give up trying to achieve some goal until you have brought every faculty into play. If you concentrate strongly enough on the effort you will be surprised at the results.—Exchange.

None of the Apple Goes to Waste.

The thoroughness with which the apple is now worked over and utilized by some manufacturers makes it comparable with the packing-house pig that leaves only a futile squeal. In many of the apple-using factories the apples are first pressed to produce cider, which may be sold as such or may be manufactured into vinegar. After thorough pressing the pomace is treated with hot water to remove the pectin, which, after purification, is sold in either liquid or solid form to manufacturers of jellies and similar products and to housewives. The much wasted and squeezed residue is dried, ground and sold as cattle food.—Department of Agriculture Bulletin.

CALLED ON FOR MUCH WORK

Amount of Labor Performed by the Human Heart Is Almost Beyond Power of Description.

The heart of one man in a lifetime pumps as much blood through the body as the blood weight of the 10,000,000 men killed during the war, according to Dr. J. Plesch, a professor in the Berlin Medical school, an authority on blood circulation and the first man to perfect a system for measuring the blood content of the human body.

"The heart of a man weighing 133 pounds and living sixty years," he said, "pumps during the course of his life 161,500,000 quarts of blood. The World war cost 10,000,000 lives. Estimating the average weight of a man's body at 133 pounds and the weight of the blood content at 5 per cent of the total, some 21,400,000 quarts of blood were shed during the war."

Professor Plesch used this illustration to show how much more powerful is this marvel of nature than the destruction which mankind with the most ingenious instruments of warfare was able to inflict upon itself in five years of desperate effort.

Mixed Religions.

Doctor Grenfell after amputating the limb of a Roman Catholic patient wrote an appeal for a wooden leg to enable the man to move about. This was published in the Congregationalist and read by a Baptist woman whose husband, a Methodist, who had worn a wooden leg, had just died. So the Methodist leg given by a Baptist woman in answer to a Congregational appeal is now being used as a perfectly good interdenominational understanding.—The Christian Advocate.

CATHOLIC CIRCLE NO. 4

WILL MEET TOMORROW
Catholic Ladies Circle No. 4, Mrs. John Richards chairman will meet Wednesday afternoon at the home of Mrs. P. McLaughlin, 917 America avenue and all members are requested to be present.

KNIGHTS OF COLUMBUS TO

MEET WEDNESDAY NIGHT

The regular meeting of the Knights of Columbus will be held Wednesday night at 8 o'clock at the K. C. Hall and all members are requested to be present. Arrangements will be made at this meeting for a class of candidates for initiation at Thanksgiving time, and it is especially urged that there be a large attendance.

MISS LORD ENTERTAINS

Fifteen girl friends were entertained by Miss Margaret Lord at her home, 903 Beltrami avenue, Saturday evening in honor of her birth anniversary. Halloween decorations were used throughout the rooms and a very pleasant evening was spent in music, games and dancing. Also fortune telling. A bountiful birthday lunch was served by Mrs. Lord during the evening.

Points of the Moon.

The "points" or ends of the crescent moon always point away from the sun. When the moon is new the setting sun, or sun recently set, is on the west of it, which sends the points to the east. As the sun sinks farther below the horizon the points of the crescent moon point more in an upward direction; for the convex part of the crescent must always be toward the sun. When the moon is waning the sun is on the east of it, which, of course, sends the points toward the west. The moon is always a sphere; the crescent is merely that part of its illuminated side which we are in a position to see.

FIRST CALF MOST VALUABLE

One Reason Is That Heifer Devotes Her Time to Nourishment and Growth of Youngster.

There are numerous reasons why the first calf from a heifer may be more valuable than succeeding calves, and one of these reasons is that the sole duties of a heifer are to grow and nourish her first-born, while her duties of future years include the production of milk and butterfat and these take toll from her and the food she receives in proportion to the magnitude of her production.

Kimberley's Wealth.

Kimberley, which is but 60 miles from the new South African diamond field, is one of the richest mines in the world. Its yearly output is placed at \$4,000,000. Ninety-nine per cent of all the diamonds produced in the last 20 years are said to have come from South Africa.

MOOSEHEART LEGION TO

MEET WEDNESDAY NIGHT

The women of the Mooseheart Legion are requested to be present at the regular meeting Wednesday evening at 8 o'clock at the Moose hall.

BLIND MAN SEES WITH NOSE

Making Up for the Loss of Sight, Nature Increases Power of the Olfactory Organs.

A blind man can "see with his nose." So, at least, writes a blind man who has made a study of his own faculties and those of his companions in darkness.

"The sense of smelling among the blind," he says, "grows exceedingly sharp, and we utilize it instinctively for our purposes, for which the normal man naturally uses his eyes. The smell, in particular, helps us in creating a sense of locality, and enables us, in a region in which we are at home, to find the way as easily and surely as if we could see the world around us with our eyes. It is relatively easy for the nose, as there are not two streets that have the same odor."

"Not only has each street its particular odor, but also the various parts of the same street; nay, each house has its characteristic smell, and the blind man knows in a street through which he often comes where he is. For the recognition of human beings the sense of smell is likewise invaluable. Besides the special smells of cigars or perfumes, there are many delicate scents by which he can recognize men. Every material of clothing has a definite odor, and with a little experience the blind man can 'see with his nose' whether one wears wool, silk or velvet."

Liquid Air to Crack Hard Nuts.

The chicka nuts from South America have some excellent qualities, but it has never been found possible to crack the shells without damaging the meat at the same time. United States government authorities applied liquid air to the problem. They did not freeze solid a piece of rubber and use it as a hammer, as is done in the classic experiment in physics, but they simply immersed the nuts in liquid air for 30 seconds and cracked them easily without damage to the kernels. Now the physicists are trying to find out whether this method can be applied commercially on a large scale. Chicka nuts were used during the war to make charcoal for gas masks and the oil from the kernels is a valuable food similar to copra.

Mean Man.

Mrs. N. Parker came bursting in to see her new neighbor, and found Mr. Jones reclining in an armchair. "Well, Mr. Jones, and what's Mrs. Jones doing?" Mr. Jones sucked his pipe with evident enjoyment. "Ah, poor soul, she's dying!" Mrs. Parker was horrified. "What? You brute! Why don't you do something?" Just at that moment Mrs. Jones walked in. Mrs. Parker spluttered: "But—but you said she was dying!" "Yes," said Jones quietly. "So she is—to see you mind your own business."

IMPORTANT IN CHICKEN YARD

Health of Fowls Depends Largely on Kind of Feed That is Given and How It is Served.

The health of our family depends largely upon the kind of feed that is given them and the way it is served. It is just as important to feed right in the chicken yard. Have the right kind of feed and see to it that it is of good quality, and not tainted in any way.

Various Kinds.

"There are all sorts of wives—the domestic kind and the ones who smoke excessive!" "Yes, we have the Kitchenette and the Humiditress, so to speak."—Louisville Courier-Journal.
