MRS. WM. ARCHER
 Tells Mothers What To Do For
 Delicate Children.
 "My fourteen-year-old daughter was
 very thin and delicate. She had a
 bad cough so that I became very much
 alarmed about her health. She was
 nervous and did not sleep well, had
 very little appetite and doctors did
 not help her. Having heard so much
 about Vinol, I decided to give it a
 trial. It has helped her wonderfully.
 She can sleep all night now without
 coughing once; in fact, her cough is
 gone. Her appetite is greatly im-
 proved and she has gained in weight.
 Vinol is a wonderful medicine, and I
 wish every mother knew what Vinol
 will do for delicate children." Mrs.
 Wm. Archer, 223 Broadway, Long
 Branch, N. J.

This delicious cod liver and iron
 preparation without oil is a wonderful
 body-builder and strength-creator for
 both young and old. We promise
 to give back your money in every
 such case where Vinol does not
 benefit. This shows our faith in Vinol.

CURIOUS MANX LAWS.

Food and Drink Alone Are Taxed and
 Debtors Are Imprisoned.

In some respects the Isle of Man is
 one of the most backward portions of
 the British empire. All the revenue is
 raised by taxes on food and drink.
 There are no death duties, no property
 tax, no land tax. The working
 classes are unprotected as well as over-
 taxed. No factory laws exist, and no
 attempt has ever been made to limit
 the hours of shop assistants, although
 Manxland is essentially a nation of
 shopkeepers. Then, although usury is
 forbidden by law, imprisonment for
 debt is still legal and is commonly re-
 sorted to.

Yet Manx laws although backward
 in some respects are in other ways
 well advanced. Every woman widow
 or spinster, in the Isle of Man, is the
 owner, occupier or holder, enjoys the
 parliamentary franchise. Every wid-
 ow enjoys half her husband's personal
 estate and has a life interest in his
 real estate, and she cannot be deprived
 of this by will.

The sale of firearms and intox-
 icants is prohibited in Manxland.
 Man for years before such a prohibi-
 tion was enforced in England. The
 fishermen have long held a monopoly
 money lenders. The highest interest
 that can be charged in the island is
 per cent, and that has been the law
 for over 200 years. (London News)

**Pleasant Relief
 from Constipation**

R. L. T. is the perfect laxa-
 tive. Composed of vegetable
 extracts from roots and herbs it
 goes at once to the liver and
 bowels, acting immediately
 without nausea or griping.

FOLEY'S KIDNEY CURE
 Makes Kidneys and Bladder Right

THE HUMAN SPINE.

Science Says It Is Imperfect Because
 Man Walks Upright.

According to the osteopathist, you do
 not have a perfectly formed spinal col-
 umn, for he is firmly convinced that
 no person in the world has a back that
 is perfect. His ideal is a spine of a
 particular curve, whose twenty-four
 bones are at equal distances apart, of
 the same formation on both sides and
 equally distant from the sides of the
 body.

The child's spine is much nearer nor-
 mal and far straighter than the adult's
 and the society woman who does no
 work is more likely to have a back
 whose curve comes nearer the ideal
 than the college athlete. The spines of
 strong men, such as the laborer or
 pugilist, are most defective, for the
 reason that constant pull and strain
 on the spinal column accentuate its
 weaknesses. The females, strong as
 they are, have weaker and more crook-
 ed spines than civilized men.

The spines of lower animals are
 stronger and more normal than ours
 and consequently are not so readily af-
 fected by disease. If man had de-
 cided to walk on all fours his spine
 might be just as good as his cat's or
 dog's. Spinal trouble started when
 our ancestors determined to walk up-
 right, and even after untold centuries
 it seems that the human spine has not
 thoroughly adjusted itself to our meth-
 od of going about. Spencer wrote:
 "That all important organ, the verte-
 bral column, is as yet but incompletely
 adapted to the upright posture. Only
 while the vigor is considerable can
 there be maintained without appreciable
 effort those muscular contractions
 which produce the S-like flexure, and
 bring the lumbar portion into such a
 position that the line of direction falls
 within it."—New York Sun.

AGGRESSIVE REPTILES.

King Cobras and Mambas Are the
 Worst of the Snake Tribe.

The majority of snakes are not, as
 most people suppose, aggressive in
 their habits, but like the British viper,
 far more anxious to get out of the way
 of the human intruder than into it.

But there are a few famous, or infam-
 ous, exceptions, and the mamba
 one of the largest of the cobras and a
 native of Africa—is said to be the
 most dangerous reptile in the world.
 It will fly at anything and anybody,
 goes out of its way to pick a quarrel
 with every passerby and has been
 known to come down from a tree
 where it was resting, apparently fast
 asleep, to try conclusions with a man
 armed with a gun. The only snake
 that at all approaches the mamba in
 ferocity is the great king cobra or
 mandrill of the east, which is larger
 than the mamba and generally quite re-
 ready to interfere with any living crea-
 ture that comes within its ken. It has
 been known to chase a man on horse-
 back, and so fast can it travel that it
 is said none but a swift footed animal
 has any chance of escape.

The poison of both these snakes is so
 powerful that, as some one once stated
 in an examination paper on reptiles,
 "even a scientist when bitten by either
 of these ferocious creatures ceases to
 be interested in the matter after the
 space of a few minutes." Among the
 Australian cobras, the pit vipers of
 America and the great west African
 vipers, there are certain species that
 prefer the offensive to the defensive
 method, and in most cases it is the ag-
 gressive varieties that carry the most
 poisonous fangs. (London Globe)

Lead and the Teeth.

A tendency of the teeth and gums to
 absorb lead has been observed by Vik-
 tor Hinz, a German dentist, among the
 workers in an accumulator fabri-
 catory. The teeth all had much tartar,
 that scraped from the teeth of one
 man affected with anemia and other
 symptoms of poisoning was found by
 analysis to contain about one-half of 1
 per cent of metallic lead. Extracting
 the seventeen teeth still retained by
 this man, the metallic lead in the
 crowns was shown to be 0.038 per
 cent and 0.032 per cent in the roots—
 sufficient to give continuous lead intox-
 ication. The tartar was removed from
 the teeth of the other workers, and
 this was followed by marked improve-
 ment in the condition of gums and gen-
 eral health.

The Greater Attraction.

A correspondent of the Boston
 Transcript says that "in looking over
 some memoranda made by John Whit-
 tier of East Haverhill (father of the
 poet) I find this item, made under date
 of Feb. 13, 1810: 'First snowstorm of
 the year.' This is possibly the storm
 his son commemorates in 'Snowbound.'
 The lad was then in his twelfth year.
 The item immediately preceding the
 one I give above is dated May 9, 1810.
 'An elephant came to town.' As Pres-
 ident Monroe 'came to town' that same
 day, it is odd that his coming is not
 also chronicled as equally memorable."

He Knew.

"You say that a straight line is not
 the shortest distance between two
 points?" exclaimed the grouch. "Why,
 you must be an idiot."
 "No, I'm not," replied the stranger.
 "I'm a taxi driver."—Cincinnati En-
 quirer.

Sounds Plausible.

"Pop, why does the moon get full?"
 "I don't know. Don't bother me."
 "Pop, I guess if the moon would only
 stick to the Milky way it wouldn't get
 full, would it?"—Lippincott's.

Nothing of worth or weight can be
 achieved with half a mind, with a
 faint heart and with a lame endeavor.
 Isaac Barrow.

To Cure a Cold in One Day

Land Value Almost Doubled

WHEN a Lee county, Illinois, farmer
 bought a run down 40-acre farm,
 his neighbors thought he had made a
 bad bargain. After three years' soil
 treatment by scientific methods, he
 raised more than eighty bushels of corn to the
 acre on land that produced less than thirty
 bushels the first year he farmed it.
 It is no longer unusual for us to get reports
 from farmers who have been using manure
 spreaders consistently for periods ranging from
 three to five years, to the effect that their land
 is regularly raising so much more produce that
 the value of the land is almost doubled.

I H C Manure Spreaders

are made in various styles and sizes to meet
 all conditions. The low machines are not too
 low to be hauled, loaded, through deep mud or
 snow. I H C spreaders are made with trussed
 steel frames in wide, medium and narrow
 styles; all of guaranteed capacity. There are
 both return and endless aprons. In short,
 there is an I H C spreader built to meet your
 conditions and made to spread manure, straw,
 lime, or ashes as required.

I H C spreaders will spread manure evenly
 on the level, going up hill, or down. The
 wheel rims are wide and equipped with Z-shaped
 lugs, which provide ample tractive power. The
 rear axle is located well under the body and
 carries most of the load. The apron moves
 on large rollers. The beater drive is posi-
 tive, but the chain wears only one side. The
 I H C dealer will show you the most effective
 machine for your work. You can get cata-
 logues from him, or, if you prefer, write

BURNED BY COLD.

Liquid Air Will Produce a Worse
 Wound Than Intense Heat.

Whoever has applied a moistened
 finger to a piece of frosty metal in
 winter well remembers the painful ex-
 perience thereby gained of the fact
 that cold as well as heat can blister
 the skin.

During some experiments in the pro-
 duction of excessively low tempera-
 tures, the French investigator,
 burned himself with cold several times,
 and the effects were so remarkable that
 he deemed them worthy of description
 to a body of scientific men.

It appears that there are two kinds
 or degrees of cold burn. In the case
 of the less severe "burns" the skin at
 first turns red, but becomes blue the
 next day. The inflamed spot swells,
 and a period varying from a month to
 six weeks elapses before the wound
 heals.

When the contact with the cold sub-
 stance is longer and more complete a
 burn of the second degree is produced.
 A malignant and stubborn wound is
 formed, and the process of healing is
 very slow.

A drop of liquid air falling on Pic-
 tois's hand produced a cold burn which
 did not completely heal in six months,
 while a scorch from heat accidentally
 inflicted on the same hand and nearly
 at the same time was healed in ten or
 twelve days.—Harper's Weekly.

A DAINTY TABLE FEAT.

Victor Hugo's Wonderful Orange and
 Sugar Combination.

In "My Autobiography" Mme. Judith,
 the great French actress, tells a story
 of Victor Hugo.

At a dinner which Judith attended
 with Alexandre Dumas somebody quot-
 ed Alfred de Musset, and Hugo was led
 to express his opinion on his illustrious
 fellow author.

"Yes," he said, "he has immense tal-
 ents. He even boasts that there are
 some who consider him as good a poet
 as I am."

Dumas jugged Judith's elbow, and it
 was all she could do to keep from
 laughing.

"At the end of the meal," our author
 relates, "Hugo treated us to a very
 strange exhibition. He put a whole
 orange, rind and all, into his mouth
 and then managed to thrust as many
 pieces of sugar as possible into his
 cheeks. This achieved, he began to
 scrunch it all up with his lips tightly
 closed. In the midst of this operation
 he swallowed two Hageny glasses of
 birch and a few minutes later opened
 his mouth wide. It was empty! No
 one made any attempt to imitate him,
 possibly because no one else had teeth
 good enough for such a feat."

SCHOLAR STATESMEN.

England's Distinguished List, From
 Bacon to Morley.

For nearly three centuries there has
 been a close association between
 scholarship and statesmanship in En-
 gland. From the time of Francis Ba-
 con to that of Lord Morley of Black-
 burn there have seldom been wanting
 among the conspicuous leaders of one
 or the other of the great parties some
 men who were deeply interested in
 learning or letters and some who had
 earned distinction as writers or stu-
 dents.

England's political history is rich in
 names, like those of Sir William Tem-
 ple, Bolingbroke, Pulteney, Carteret,
 Burke, Fox, Canning, Derby, Glad-
 stone, Beaconsfield and Salisbury, not
 to mention those of Swift, Addison,
 Grote, Macaulay and Mill, whose own-
 ers would be remembered, or had at
 least the power to make themselves re-
 membered, if they had never taken an
 active part in public affairs.

PLAINING SPONGES.

Methods of Making Them Grow in Use
 on the Florida Coast.

Biscayne Bay, Sugar Loaf Bay, An-
 cote Keys and Key West, on the Flor-
 ida coast, are the principal places in
 this country where experiments in
 sponge culture have been made. The
 various methods are as follows:

"Seed" sponges are cut into small
 pieces and, after having been attached
 by wiring or suture to circular or tri-
 angular cement blocks, are dropped or
 lowered depending upon the depth to
 rest on the ocean bottom, where they
 remain for a year or two until they
 reach a size proper for commercial pur-
 poses. They are then taken by the
 hook, when new cuttings are attached
 and the cement blocks let down again.

Another method was to string them
 on a wire held horizontal by stakes
 driven in the bottom. In doing this,
 however, various difficulties arose. The
 sponges became loose and rotted on
 the wire, enlarging the hole made
 through them, and the action of the
 salt water corroded and destroyed the
 wire until, after many trials and ex-
 periments, a lead wire with a copper
 core was successfully used.—St. Nich-
 olas.

Paint That Makes Good

Our Stag Paint has the
 largest covering capacity
 and greatest durability.
 It is made in beautiful,
 strong, brilliantly toned
 colors, of great permanency.
 It is the ideal paint for all
 work. And now is the time
 to paint. Come and see
