POSTS BECAME TREES.

Straight Row of Beautiful Catalpas That Had Been Division Line Stakes.

"People talk of the wonderful growth of the tropical jungle," said a traveler to a Washington Post man, "but they rarely think of the wonderful vitality and swift growth of our own domestic trees in this country."

"There is the poplar, for instance. Rip branches from a tree, thrust them into the ground without any care whatever, and inside of three months every one of those branches will have sent out a mass of roots and be developing fast into a tree.

"I have passed through a thicket of poplars in New York State where trees of about 15 feet in height stood so close together that a man could barely push his way between them. They were all flourishing, healthy young trees, with thick trunks.

"To my surprise, I learned from my guide that this whole little grove had sprung up from branches stuck into the ground after a windstorm had torn them from other trees along the road.

"A still more wonderful tree is the catalpa, known to most boys on account of its long bark, which some of them use for smoking after it is dry. The catalpa has such a remarkable vitality that even a tree has been cut down and sawed into lengths again and again, to strike root and sprout, and finally grow up into good trees.

"I saw a fence in the middle west that consisted of a straight row of beautiful catalpas, each of them nearly 20 feet high. The row was so mathematically straight that I wondered how the trees had grown so, especially as the row was nearly half a mile long. So I rode over to them and discovered that barb wire was stretched from tree to tree, evidently as a division fence. Later I met the owner of the land, and he explained to me how the trees had come to grow in so perfect a line.

"About ten years ago," he said, "I wanted to raise a barb wire fence along the line of my property, to prevent my cattle from straying. I went into the woods, and we chopped down a lot of small catalpas, about sapling size. We chopped the roots off, leaving a pointed end at the base, and sawed the crowns off clean, thus making stakes about eight feet long. These we drove into the ground in the row that you saw, and attached our barb wire to them. Inside of six months every stake had begun to sprout, and since then the fence stakes have grown into trees."

THE JOY OF FEELING RICH

Even for a Little While It Is Very Comforting, Says the New Club Member.

"It's a queer thing, this belonging to a club," said a man who had just paid his first dues, relates the New York Sun. "But it's fine to feel rich, even once in awhile.

"Take the simplest thing in the world—going into the house. All my life I've been used to fishing around for a latchkey, wriggling out of my own overcoat and hollering to know who was home.

"But when I go into my club—notice 'my club,' I can say it easy now—when I go into my club, as I say, I don't even push open a door. Some one in livery does that and bows as I stalk past. I am allowed to lift my hat off, but that's about all. And everyone says 'Sir' to me until I feel as if part of Wall street was mine.

"Same way if I eat there. Takes a head waiter and at least one every day waiter to get me into a chair. And as for wondering what we're going to have for dinner and if Sunday's roast of beef isn't about finished—why, I can have roast beef fresh every day.

"You can do all that in a fine hotel or restaurant, but you don't get called by name unless you're more of a rounder than I am—and what's worse is that you're not expected to sit around and be waited on unless you're spending money in such a place.

"Oh, it's great to feel rich now and then, and I don't know that it makes home seem any worse."

Not for Self.
The lights of this world are not doing their shining before mirrors.—Chicago Tribune.

NOVEL USES OF CEMENT.

New Jersey Man Makes Stoves, Ice-boxes and Dog Kennels of It.

W. N. Wight, of Westwood, N. J., has made for use at his home a cement stove, cement ice box, shelves and dog kennel which have attracted much attention. Mr. Wight says, reports an eastern exchange, that any ingenious man can duplicate them with a little woven wire, a few boards and some cement and water.

The stove is one of the most novel of the products of Mr. Wight's genius. It is not exactly such a stove as one would put up in his parlor for use in heating it, but it serves its purpose well. It was built for heating purposes. Mr. Wight says it radiates a mild and equable heat, such as it is not possible to secure from an iron stove. Stoves of this material are said to be especially serviceable for use in cellars, greenhouses and on farms for cooking feed. Mr. Wright's stove is cubical with a hinged door in front.

A fruit cupboard is another of Mr. Wright's cement devices. While comparatively light in construction, its shelves will support a ton's weight. Against the side of the house outside the door is an ice chest of the same material. The interior is provided with cement shelves, scarcely thicker than wooden shelves would be, but much stronger.

He has a kennel for his dog, which is attractive in appearance, having the ordinary projecting eaves, door casings and other parts in imitation of the usual wood building. The walls of this house are two and a half inches thick and possess great strength because of metal reinforcements. Horse blocks, hitching post, carriage houses, stables and a mushroom cellar testify to Mr. Wright's fondness for cement, for of this material are they built. There are other articles which would be found useful to a man living in the country that could be made from cement. Drinking troughs, stationary washtubs, receptacles for retaining rain water and cooling tanks for milk might not be beyond the farmer's ingenuity to construct with his own hands.

Lightness and great strength are secured by the use of woven steel netting. This prevents the concrete from cracking and gives ten times the strength which would otherwise be obtained. In making these articles, which were all constructed of Portland cement, the cement was mixed with sand and cinders, in proportion of one, two and five parts. The only other ingredient in mixing the compound was water. Such structures will never need to be painted. They are quickly, smoothly and permanently finished by covering the surface, as soon as the mold is removed, with a coat of cement.

Virtue in Work Cure.
The men and women who do not regard their work as drudgery and who realize, with Carlyle, that the individual who does not work is in some sense either a beggar or a thief, never lay any little ills they may have to their work, until they are sure that their habits of living and eating are in accordance with the simple rules of health. Physically, mentally, morally, work is a saving grace. Shirking is a sin against the sinner and willingness to do one's share is half the burden lifted. The "work cure" should fill a long felt want.—Duluth News Tribune.

Trunkless Elephant.
"Mr. Skinner is an elephant on my hands," remarked the landlady confidentially. "I can't induce him to settle."
"Why not seize his trunk?" suggested the star boarder.
"He hasn't any," replied the landlady.—Chicago Daily News.

The Rub.
Mrs. New—Do you believe everything the fortune teller told you?
Mrs. Blue—No; she said Jack and I would never quarrel again, and I know my new winter suit is going to cost at least \$50 more than I've ever paid before!—Detroit Free Press.

Same Thing, Generally.
When a woman doesn't want her husband to gamble she means she doesn't want him to lose.—N. Y. Press.

RUINED BY A RASH WAGER.

A rash wager has ruined many a man financially, but this wager ruined a man physically. He was proud of his strength and wagered that he could lift a ship's anchor. He won the wager, but the strain was too great for him and he broke down in health from that day.

There's many a man or woman who undertakes too great a task for the strength they possess. They won't give up, so they break down. The woman drudges in the house, the man toils in the store. They don't break down by one tremendous strain, but by a steady over-draft on their strength.

People who are run-down in health, deficient in vitality, worn-out or worked out, will find new life and strength in the use of Dr. Pierce's Golden Medical Discovery. It cures diseases of the stomach and other organs of digestion and nutrition, and so enables nourishment of the body. It purifies and enriches the blood, and builds up the body with sound muscle and solid flesh.

"When I commenced your medicine my health was completely broken down," writes Mrs. Minnie Lampman, of Porcupine, Wis. "At times, generally after eating, was taken with terrible distress in stomach. Words fail to express what I suffered. My right arm was almost helpless—liver very much affected, and my nerves were so bad I was almost in hysterics. I was treated by two doctors, but all to no avail, for I was no better. I felt dreadfully discouraged, but thought I would try once more to find relief. I began to use Dr. Pierce's Golden Medical Discovery and 'Favorite Prescription.' I gradually began to improve each day, and grew strong all over."

Accept no substitute for "Golden Medical Discovery." There is nothing "just as good" for diseases of the stomach and blood.

Dr. Pierce's Pleasant Pellets cleanse the bowels and stimulate the sluggish liver.
