"OLD CODGER" IN HARD LUCK
 Like the Most of Us, He is Being
 Rendered Uncomfortable
 by the War.

"Well, squire, how does the war
 look to you now?" inquired a fore-
 most member of the village board of
 strategy.

"To tell the truth, Lester," replied
 the Old Codger, "I am a good deal
 discouraged over the outlook at
 times, and then I remember that I
 come of a long line of hardy ances-
 tors and on that account the chances
 are pretty fair for my surviving it.
 You see, my nephew is home from
 the state university with the latest
 curlicues and contortions in the pro-
 nunciations of foreign names and
 places, and as my education was of
 the poor-but-honest variety we sel-
 dom see any important word in the
 war news from the same viewpoint.
 I am too old to learn learning and
 he is too young to learn manners,
 and consequently we are divided up
 into hostile bands nearly the whole
 time. He seems to flourish under it,
 but I'll confess that it is wearing on
 me to be continually defeated and
 put in the wrong."—Kansas City
 Star.

PUNCH REMAINS ON THE JOB
 London's Humorous Publication Re-
 fuses to Be Depressed by the
 Conflict of Nations.

London isn't permitting the war
 to interfere with its solemn good
 humor, as expressed in Punch. Here
 are a few clippings: The London
 museum is open again. The curator,
 we understand, would be glad to
 add to his collection of curiosities
 any Londoner who is still in favor of
 a small navy. . . . An eclipse of
 the sun took place on Friday last. It
 is supposed to have been an attempt
 on the part of the sun to prevent the
 Germans finding a place in it. . . .
 "Thousands of young men without
 ties," complains a writer in the Ex-
 press, "remain indifferent to the call
 of their country." We are afraid
 that this is true not only of those
 without ties, but also of some who
 wear expensive cravats. . . . A
 gentleman writes to the Observer
 to mention that an American sur-
 geon, on bidding him farewell the
 other day, remarked, "Blood is
 thicker than water." This statement
 coming from a medical man, who
 ought to know, is extremely valuable.

GOOD REASONING.

A certain young man's friends
 thought he was dead, but he was only
 in a state of coma. When, in ample
 time to avoid being buried he showed
 signs of life, he was asked how it
 seemed to be dead.

"Dead!" he exclaimed. "I wasn't
 dead. I knew all the time what was
 going on. And I knew I wasn't
 dead, too, because my feet were cold
 and I was hungry."

"But how did that fact make you
 think you were still alive?" asked
 one of the curious.

"Well, this way: I knew that if
 I were in heaven I wouldn't be hun-
 gry. And if I was in the other
 place my feet wouldn't be cold."—
 Tit-Bits.

THEN THEY SLEW HIM.

"No wonder," said the Cheerful
 Idiot, "that the Germans are hard
 to force back."

"Why the 'no wonder'?" asked
 the other boarder.

"Well, as the Germans are not
 given to treating, why should they
 take kindly to re—"

But we draw a veil.
 There is too much bloodshed in
 the papers now anyway.

IN THE WEE SMA' HOURS.

She (at the top of the stairs)—
 "What's all that noise down there?"
 He (in the hall)—"I guess it must
 be the dawn breaking, dearie."

A MILD CORRECTION.

"This is the train I am going to
 take to New York."

"Now, if I were you, I'd let the
 engineer attend to it."

HIS DEVOTION.

"How devoted your husband is to
 continued stories!"

"Yes, he even begins the day with
 a cereal."

THEIR PLACE.

"How shall I class this—'Corre-
 spondence of a Coquette?'"

"Certainly; among the belles-let-
 tres."

DAIRY

SELLING HEIFERS FOR BEEF
 System of Depletion of Breeding Stock
 is Going on Continuously—
 Money for Feeder.

Notwithstanding the general scarcity
 of cattle in the country, which is con-
 ceded by every cattleman of intelli-
 gence, there continue to appear in all
 the stockyards daily journals reports
 of carloads of extra fine yearling
 heifers that brought the top price for
 the day, etc., says Twentieth Century
 Farmer. Of course, these reports are
 true. It is an absolute fact that car-
 loads of the very best heifer calves
 have been bought, fattened for the
 baby beef market and shipped back
 and sold to the packers for slaughter.

This system of depletion of the
 breeding stock of the country is going
 on continuously in the face of what
 might be termed a cattle famine.
 When will it stop? Not until these

Good Dairy Foundation.

heifer calves will bring more for
 breeding demands than they do now,
 or will bring as feeders. As long as
 the feeder can afford to buy this class
 of cattle and make his feeding venture
 profitable, or more profitable than by
 using other kinds of cattle, he will
 keep right on buying and feeding
 these choice heifers, calves and year-
 lings. There may be a little sentiment
 in this business with some people, but
 there are so few of this kind of per-
 sons in the beef-making industry that
 they are lost sight of in the scramble
 for gain of the almighty dollar.

PROPERLY BALANCED RATIONS
 Report of Results of Tests Made by
 Illinois Station—Digestible
 Nutrients Saved.

(By H. R. FLINT, Minnesota Experiment
 Station.)

A balanced ration is "one in which
 each of the different food materials or
 nutrients is present in just the right
 proportion and amount to meet the
 needs of the animals," says Bulletin
 159 of the Illinois agricultural experi-
 ment station. Tests indicated that
 cows fed balanced rations yielded a
 pound of butter fat for each 17 pounds
 of total nutrients consumed, while
 21 pounds were consumed to a pound
 of butter fat when an unbalanced
 ration was fed. The use of the balanced
 ration thus saved four pounds of di-
 gestible nutrients for each pound of
 butter fat produced, or a pound and a
 quarter of butter fat was produced by
 the same number of pounds of digesti-
 ble nutrients in balanced rations as
 was required for a pound of butter fat
 when the unbalanced ration was fed.

Not only was the butter fat more
 economically produced, but the cows
 given a balanced ration finished the
 test with better appetites and in much
 better flesh and general physical con-
 dition than the others. It is not spe-
 cially difficult to gain the profit re-
 sulting from the balanced ration.

Supplemental Cow Feed.
 For green feed to supplement the
 pasture during the latter part of
 summer and early fall, one acre for
 15 head of cows should be planted.
 Have one large field, and drill the
 corn the long way of field. Be sure to
 have the ground finely pulverized and
 rolled; the field can then be quickly
 planted and early cultivation given.
 Corn is the best crop to grow for green
 feed for the silo, or to cure for winter
 feed.

Building a Silo.
 It is not economical to build one for
 less than eight or ten cows. Those
 expecting to build should correspond
 with the college of agriculture of their
 state to secure plans, bills of the ma-
 terials required and any other infor-
 mation that they may desire.

Produces Creamy Butter.
 Churning at too high a temperature
 or churning too long will produce a
 greasy butter in which the grain is in-
 jured.

Increases Capacity of Farm.
 The capacity of the farm may be in-
 creased by building up the silo so as
 to make each acre yield more.

Cleaning Dairy Utensils.
 After the dairy utensils have been
 cleaned, invert them in the pure air
 and where the sun will strike them.
