AMERICAN TOBACCO INDUSTRY HIGHLY SPECIALIZED.

WASHINGTON, D. C., April 13.—Each important tobacco district of the United States produces a type of tobacco for special purposes of manufacture or export. The methods of growing and handling a crop must vary according to the type of leaf desired, and therefore according to the particular districts where it is grown. The U. S. Department of Agriculture has just issued a bulletin on "Tobacco Culture," which recommends methods for the production of various American types.

The bulletin emphasizes the fact that overproduction in a constant menace in all the established centers of tobacco growing and that the development of the industry in new sections on a large scale is hardly advisable at present. Another reason why tobacco culture in untried sections may result in failure is that the leaf produced will not be quite right in type, and therefore it will not find a satisfactory market.

The commercial value of tobacco is influenced to a greater degree by particular soil and climatic conditions than is that of almost any other important crop. This has caused the industry to become highly specialized and the trade looks regularly to well-defined areas for the various types of leaf it requires.

As tobacco grows readily over so large an area it is strange that many farmers experiment with it and often secure seeming success. That is, the plants grow readily but when it comes time to sell the crop the farmer can find no market.

"I have grown five acres of tobacco," a farmer writes from a district where tobacco is not grown for the commercial trade. "But there seems to be no market. Can the Department of Agriculture help me?"

The Department can only advise this farmer that conditions are such that even though his product appear to be of good quality he will probably be unable to market it, as the trade does not recognize his section as a tobacco-producing area. Here we have the difference emphasized between tobacco and a crop like corn for which a market may readily be found no matter where it is grown if the quality is good.

There are three general classes of tobacco described in the new bulletin:

- (1) Cigar tobaccos.
- (2) Export tobaccos.
- (3) Manufacturing tobaccos.

By manufacturing tobaccos are meant all types used in manufacture other than cigars. The manufacturing and export classes, however, have much in common as regards cultural methods, and some types are used for manufacturing and for export; therefore these two classes are considered together as distinguished from the cigar tobaccos.

Each of these three classes of tobacco may be subdivided into types, depending on their special uses, methods of growing and curing, or on the variety of seed used. In the case of cigar tobaccos there are three principal types, corresponding to the three parts of the cigar—wrapper leaf, binder leaf, and filler leaf. In the manufacturing and export tobaccos are such types as the flue-cured, Virginia sun-cured, White Burley, dark fire-cured, etc. These various types are produced on certain specific types of soil and according to definite methods of growing, curing and handling the crop. In some cases the variety of seed used is also an important factor. The special uses of the principal type embraced in the three fundamental classes of tobacco are brought out in connection with the cultural directions for the more important types.

A typical district for the culture of cigar tobacco is the Connecticut valley. The new bulletin outlines briefly the best cultural methods for this region. Detailed instructions are given on care of the seed bed, preparing and fertilizing the land, transplanting and cultivating and harvesting.

The export and manufacturing types of tobacco are grown mainly in Kentucky, Maryland, North Carolina, Virginia, Tennessee, West Virginia, Southern Ohio and Southeastern Indiana. Best methods for the culture of the various types are explained in the new bulletin.

One of the most troublesome and expensive features of tobacco culture, particularly in the Southern districts, is the control of numerous insects, which if not combated would oftentimes completely destroy the commercial value of the crop. Among the important insects attacking the tobacco plant may be mentioned the tobacco flea-bettle, the tobacco "wire-worm," cutworm, the hornworm, or "green worms," are usually the most destructive.

For detailed information regarding insects attacking tobacco and methods of combating them the reader is referred to Farmers' Bulletin 120, entitled "The Principal Insects Affecting the Tobacco Plant." The new bulletin "Tobacco Culture" is Farmers' Bulletin 571, and either of these publications may be obtained free by application to the U. S. Department of Agriculture, Washington, D. C.

FIRST CLASS SERVICE AT FREEMAN'S BARBER SHOP.
 Having engaged the service of Louis Livers, an experienced barber, I am now prepared to handle my trade and give the most thorough satisfaction. Give me a call and be convinced.
BUCK FREEMAN.

The average rounder doesn't care how dirty his collar is as long as he has a roll in his pocket. But the minute he goes broke he begins to worry about his front.
AND BLOOD CLEANSER
 Flush out the accumulated waste and poisons of the winter months; cleans your stomach, liver and kidneys of all impurities. Take Dr. King's New Life Pills; nothing better for purifying the blood. Mild, non-gripping laxative. Cures constipation; makes you feel fine. Take no other. 25c. at your druggist.
 Bucklen's Arnica Salve for all hurts.

Asia, which is the largest of the continents, has an estimated area of 17,057,666 square miles.

When a man says he would die for a girl and then marries her he doesn't mean that she should buy an automatic and set up a target range in the cellar.

STRENGTHENS WEAK AND TIRED WOMEN.
 "I was under a great strain nursing a relative through three months' illness," writes Mrs. J. C. Van De Sande, of Kirkland, Ill., "and Electric Bitters kept me from breaking down. I will never be without it." Do you feel tired and worn out? No appetite and food won't digest? It isn't the spring weather. You need Electric Bitters. Start a month's treatment today; nothing better for stomach, liver and kidneys. The great spring tonic. Relief or money back. 50c. and \$1.00 at your druggist.
 (April)

Never roast your fool friends. They are the only ones who will lend you any money.

The wise man does his duty and lets the other fellow do the explaining.

SPRING LAXATIVE AND BLOOD CLEANSER.
 Of all interpretations of various roles last season in New York City, none received higher commendation than that of Madame Nazimova for her portrayal of "Mrs. Chepstow," in James Bernard Fagan's adaptation of "Bella Donna." In the delineation of this somewhat unpleasant heroine by the distinguished Russian actress she has scored a positive triumph. Chas. Frohman has made an elaborate and handsome production for "Bella Donna." With her New York company of capable players, Nazimova comes to the Lexington Opera House Thursday, April 16.
