DOG LICENSES ISSUED
 Up to the present time County Clerk Pearce Paton has issued a total of 1,723 dog licenses for the city and county owners of canines. The other afternoon a man who had secured a license a few moments before rushing into the Clerk's office, and throwing down a newspaper clipping, demanded his money back, saying the paper stated that the Legislature had passed a law allowing each person to have one dog free of license. Mr. Paton explained that the law had not been passed, and if it should be passed it would not go into effect this year.

Kansas Tip.
 You should be polite to the young boys you meet. Perhaps some day one of them will be superintendent of the poorhouse of which you are an inmate.
 —Altoona Tribune.

PIMPLY? WELL, DON'T BE
 People Notice It. Drive Them Off with Dr. Edwards' Olive Tablets

A pimply face will not embarrass you much longer if you get a package of Dr. Edwards' Olive Tablets. The skin should begin to clear after you have taken the tablets a few nights.

Cleanse the blood, bowels and liver with Dr. Edwards' Olive Tablets, the successful substitute for calomel; there's no sickness or pain after taking them.

Dr. Edwards' Olive Tablets do that which calomel does, and just as effectively, but their action is gentle and safe instead of severe and irritating.

No one who takes Olive Tablets is ever cursed with a "dark brown taste," a bad breath, a dull, listless, "no good" feeling, constipation, torpid liver, bad disposition or pimply face.

Olive Tablets are a purely vegetable compound mixed with olive oil; you will know them by their olive color.

Dr. Edwards spent years among patients afflicted with liver and bowel complaints, and Olive Tablets are the immensely effective result. Take one or two nightly for a week. See how much better you feel and look. 15c and 30c.

BRIGHTER EVENINGS

Just History

In '76
 The Colonial Dame
 Spun her cloth
 By Candle flame.

In 1860
 In Crinoline bright,
 She greeted her guests
 By Coal Oil light.

And later on,
 How time does pass
 Her home was lit
 By flickering Gas.

But the girl of to-day
 Who wants her home bright,
 Just presses a button
 And has Electric Light.

MOST AWESOME OF VOLCANOES

Kilauea in Hawaii Is Perpetual Show Place, Performing Day and Night.

LAVA IS CONSTANTLY BOILING

Crater Covers an Area of 2,700 Acres and is Eight Miles in Circumference—Paved Highway Leads to It From Hilo, 30 Miles Away.

Hilo, T. H.—On the Island of Hawaii—the big island, as it is called, of the Hawaiian group—is located the only tame volcano in the world. It is a perpetual show place, performing day and night and at times putting on a demonstration that is awe-inspiring in its grandeur and manifested power. On such occasions boat excursions are run here from Honolulu and other island towns. It was only last March that Kilauea belched forth a flood of molten lava that flowed in giant streams over the vast floor of the circular crater that surrounds the active pit of Halemaumau. The big crater covers an area of 2,700 acres and is eight miles around. The pit of constantly boiling, steaming and screeching lava and gas is situated almost in the center of the original crater. The active volcanic pit is more than three miles in circumference.

Has No Counterpart.
 From a topographical standpoint the volcano of Kilauea has no counterpart. There leads to the very rim of the crater a paved highway, all the way from Hilo, 31 miles. The only visible hint that is given one that a volcano is anywhere around is the white sulphur fumes that may be seen during the day and the glowing red of reflected fire from the live pit at night.

So easy is the grade of the highway that the rise from sea level to an altitude of 4,000 feet in less than thirty miles is scarcely noticed, except by the increased chilliness of the air. Then suddenly at a turn in the fern-lined road there bursts into view the black, undulating crater of Kilauea, and there comes to one's ears the hissing of the giant cauldron of gas and molten lava in the pit of Halemaumau. The automobile is run through a pass in the outer rim and out upon the hardened lava. The remaining short distance to the performing center is made on foot.

Owing to the accessibility this volcano is visited by hundreds of tourists every year. It is in such close contact with the every-day life of the people of the surrounding territory and the home visitors that whatever dangers there may be in its occasional overflows are lost sight of. During the eruption of last March some of the visitors came near being cut off by the streams of lava which flowed over the enormous sink that surrounds the main crater. Even small children ventured close to the lapping columns of molten froth that rolled out of the fiery pit.

Hotel at Crater's Edge.
 Upon the very edge of the big crater is built the Volcano house, a modern hotel where the guests may view the performances of the restless monster from the windows of their rooms or from the restful chairs upon the verandas. Many times during the day light tremors of earthquakes may be felt at the hotel, and on all sides of the building white fumes of sulphur constantly pour forth from cracks in the lava formation. For miles around the main crater of Kilauea are to be seen evidences of vast destructiveness wrought by the volcano in times past, all going to show that its present long period of comparative passivity may be only a prelude to another disastrous performance.

It is at Kilauea that the most thorough scientific study of volcanoes and earthquakes ever undertaken is in progress. This work is in charge of Prof. Thomas A. Jaggar, Jr. He conducts an observatory and seismological station upon the brink of the volcano, where every phase and movement of the lava pit and the earth tremors are recorded day by day. This research work has already resulted in many valuable discoveries, some of which promise to be of much practical value in the future, it is asserted.

For one thing, the conclusion has been reached that the underground fires of Kilauea may be used for industrial purposes. At the last session of the Hawaiian legislature a bill was introduced appropriating \$25,000 to make borings in the floor of the big crater to test the heat supply for power purposes. While this measure failed of final passage because of the rush of other measures that were deemed of more importance, it is regarded as practically assured that the next legislature will make the desired appropriation. It is stated that the use of this heat in a large power plant or piping it to sugar mills and other industries could be easily accomplished.

Power Possibility.
 "Volcano power for human use is a possibility," said Professor Jaggar, for heat is power, and volcanoes generate heat. Earth steam is used directly near Volterra in Italy. Vast stores of earth steam exist in Japan, Iceland, the Yellowstone and New Zealand. There is no steam pressure at Kilauea, but there is a furnace of oxidizing volcanic chemicals, with sulphuric acid and alum and

epsom salts as by-products, so that borings may discover very interesting temperatures and minerals. It is not proposed by boring to tap a steam jet, nor merely to discover hot rock; the bore-hole would immediately cool it off. The source of renewable energy in a volcanic boring is chemical process. Cracks near the pit of Halemaumau in Kilauea volcano have opened from time to time. They got hotter and hotter until they became glowing furnaces, emitting apparently merely hot air. If a boring will start such a furnace, then 20 holes at such a place will run a respectable-sized engine."

Rising to a height of 13,000 feet only a few miles from Kilauea is the great volcano of Mauna Loa, which has intermittent eruptions, the last one of great violence beginning in October, 1919, and continuing for five months, the flow coming from a split in the mountain far down upon its flanks. The black rolls of treacle lava flowed for miles through the sandflats, forests and bare rock slopes, finally emptying into the sea, where giant clouds of steam rose day and night. Myriads of sea fish were killed by the boiling water.

Scientific Possibilities.
 Speaking of results that may come from the research work which he is conducting, Professor Jaggar said: "Probably the most far-reaching use which can be made of the results of chemical and exploratory work dealing with the cores from Kilauea will be the application of the knowledge of mining. Ores of copper and the precious metals occur near volcanic rocks. Sulphur is closely associated with them. Copper sulphide has been found repeatedly in the glowing cracks of Hawaiian lava. Sulphides may exist underground in the hot region, and such discovery would be interesting to mining engineers."

Professor Jaggar's volcanic study at Kilauea has already reached the point where it is known that violent eruptions may be foretold almost to the minute, and in ample time to give warning to all persons who may be in danger of the outburst. The same is true as to tidal waves that may be produced by volcanic eruptions and earthquakes.

"Our little laboratory at Kilauea," he said, "was started by an unselfish group of business men of Hawaii. They are planting volunteer stations with earthquake instruments and will reap a crop of new discoveries. A similar group in Massachusetts, with the encouragement and publicity that the Springfield Republican could give, placed a man at Naples for volcanic research, and now they are helped out by Carnegie's great benefaction. The Carnegie institute also is extending its work to the earthquakes of California under a man who was formerly seismologist of the Hawaiian observatory."

VENICE PRISON FOR CONCERTS

Council Decides to Put Dungeons Built in Sixteenth Century, to Modern Use.

Milan.—All lovers of Venice will learn with regret that the municipal council has decided to turn the old prisons to some modern use.

The old prisons, which are connected with the Palace of the Doges by the famous Bridge of Sighs, were constructed in the sixteenth century by Giovanni da Ponte and were the scene of many historic episodes. Several high political personages were executed there under the Republic and later on patriots like Tommaseo and Manin were thrown into them by the Austrians. There is a proposal to make a concert hall of the old prison.

The prisons underneath the leaden roof of the Doges Palace, known as the Piombi, were destroyed in 1797. From the passage leading to the Bridge of Sighs a staircase descends to the Pozzi—dungeons with a torture chamber and a place of execution. The prisons built by da Ponte are the criminal prisons, which have been in use for ordinary criminals.

Heart on Man's Right Side.
 Hagerstown, Md.—Jacob Shaw, former garden trucker, now furnace man at the Seventh Day Adventist church here, has his heart in the right side of his body instead of the left. One day he complained of a pain in his heart, and placed his hand on his right side. His wife laughed and said: "Why, your heart is not on the right side of your body!" He insisted that it was, and his statement was confirmed by a half dozen physicians and by X-ray photographs.

Mother and Child Are Attacked by Hawk

Port Deposit, Md.—The largest chicken hawk yet seen in this section was killed on Main street. Driven by hunger into the town, it sighted in the yard of James Craig a large, fat hen, and had fastened its talons in the prospective meal. Mrs. Craig ran to the rescue with a broom. She was followed by her two-year-old son. The bird turned upon the mother and child. Their cries were heard by an out-of-town salesman, who, being told by Mrs. Craig where the gun was, procured it and killed the bird. It was half starved, but measured four and one-half feet from tip to tip of wings.

GET THE PEOPLE OUT

There are few things that stimulate a greater interest in town improvement than to have large numbers of citizens attending every meeting of the City Council.

It gingers up the members of the board, for when they know the eyes of their constituents are upon them at every meeting they will put forth greater efforts to make good in their undertakings. It becomes a matter of pride with them to measure up to public expectations.

It keeps the people posted as to what is being considered for the town, and this knowledge increases the common interest.

It brings out new ideas for the board to consider, for whenever a people are deeply interested in a subject they will consider and discuss it from every angle, thereby disclosing its weak points and emphasizing its good ones.

It is an interest stimulator and a progress breeder any way you take it.

Get the people out to Council meetings, and let 'em talk.

COLDS

"Pape's Cold Compound" Breaks any Cold in Few Hours

Instant Relief! Don't stay stuff-up! Quit blowing and snuffing! A dose of "Pape's Cold Compound" taken every two hours until three doses are taken usually breaks up any cold.

The very first dose opens clogged nostrils and the air passages of the head; stops nose running; relieves the headache, dullness, feverishness. "Pape's Cold Compound" costs only a few cents at drug stores. It acts without assistance, tastes nice, contains no quinine. Insist upon Pape's! (adv-T)

Begging the Question.
 Begging the question is assuming a proposition which, in reality, involves the conclusion. Thus, to say that parallel lines will never meet because they are parallel, is simply to assume as a fact the very thing that you profess to prove.

Golf may be a great game, but nobody ever heard of George Washington or Abraham Lincoln playing it.

WOMEN CAN DYE OLD FADED THINGS NEW IN DIAMOND DYES

Each package of "Diamond Dyes" contains directions so simple any woman can dye or tint her worn, shabby dresses, skirts, waists, coats, stockings, sweaters, coverings, draperies, hangings, everything, even if she has never dyed before. Buy "Diamond Dyes"—no other kind—then perfect home dyeing is sure because Diamond Dyes are guaranteed not to spot, fade, streak, or run. Tell your druggist whether the material you wish to dye is wool or silk, or whether it is linen, cotton or mixed goods. (adv)
