Butler was the scene of an interesting little "strike," last week, that came about this way.

Geo. Shaffer, a non-union stonemason has been the contractor for the cellar walls of the I. J. McCandless house on South Main street, and also that for the wall in front of the Jefferson street school-building, and the masons he employed to help him with the jobs were all union men excepting William Barr, of the West End, who was employed on the Jefferson street job.

The Bricklayers and Stonemasons' Union of Butler had a meeting a few nights ago and resolved to "strike" unless Barr was discharged, and so informed Shaffer next day. Shaffer paid the Union men, and hired some non-union men to assist Barr finish both jobs, and on Monday work was progressing on both.

Shaffer says that Barr was the best mason he had, that some of the men who struck learned why they know of their trade under him, and that they expressed regret at leaving their work but said "our union says we mustn't."

Barr is an old stonemason who has lived in Butler several years, and he says he will finish both jobs.

Shaffer also has the contract for the foundation of the Patterson building, and is going ahead with it, and whether this will be followed by trouble with other bricklayers, carpenters, plasterers, painters, etc., remains to be seen.

NEIGHBORHOOD NOTES.

The New Castle Courier tells this story on a Lawrence county man: One of the citizens of Palauk township has been an extensive raiser of turkeys, and his method is somewhat peculiar. Early in the spring he sets in the neighborhood of 100 turkey eggs under the common barnyard hens. In nearly every case the eggs were hatched. When the "chicks" became old enough to take care of themselves, the owner of them chased his brood to the woods, where they thrived and grew fat on what they could pick up. The owner did not see the birds from morning, shortly before Thanksgiving, which is known as turkey harvest, the man referred to went out into the woods for miles around and chased all the turkeys he could find into his barnyard. He then counted out 101 and penned them up, chasing the others away. He had one hundred eggs in the spring and calculated that there ought to be one hundred turkeys. The extra one captured was for the trouble he had in driving them home.

During one of the recent thunder-storms, John F. Raney, aged 16, of Pardees, Mercer county, was killed by lightning while building a load of hay which his father and grandfather were pitching on the wagon. The men were slightly stunned, and one horse was knocked down. The boy was struck on the left side of the head, extending down his left side, tearing the clothes from his body.

Bradford was visited by a terrific hail storm last Friday afternoon, during which hailstones two inches in diameter fell. The roof of the St. James hotel was torn off and the house damaged. The loss in the town is estimated at \$50,000.

Jack Cooley the notorious outlaw of Fayette Co. was killed while trying to rob a spring house near Fairbairns, last Thursday night. The spring house had been loaded a gun with buckshot, and placed it in the milk-house, with the muzzle pointed towards the door, and the trigger connected by a string with the door. Jack was the first to enter the door and received the charge in his stomach. His companions carried him away and he died next day.

A recent circular from the State Board of Health gives the following hints and advice to be observed in hot weather.

Cholera morbus is caused by improper food and sudden chilling of the body after exposure to great heat. Certain substances will produce it in certain persons, such for instance as veal, raw milk taken with fish, or shell fish, and all dishes cooked with milk such as rice pudding, and even ice cream, when kept too long. Eruptive and over-ripe fruit, especially when taken with draughts of ice water, will cause it; but sound, ripe fruit is a natural food in hot weather, and wholesome. Avoid becoming chilled during sleep. In a climate as changeable as ours, a light blanket should always be at hand, to be drawn up in case it suddenly becomes cold during the night.

Persistent summer diarrhoea is usually caused by malaria, sewer air or impure water. The conditions liable to contain a mite and water, should be carefully sought out and remedied. The water can be rendered safe by boiling.

As dysentery is often epidemic, it is wise to consider every case as a possible source of danger to others and to disinfect the discharges with care.
