BUTLER, PA., THURSDAY, AUGUST 6, 1896.

No. 31

Constipation

Causes fully half the sickness in the world. It retards the digested food too long in the bowels and produces biliousness, torpid liver, indigestion, bad taste, coated tongue, sick headache, insomnia, etc. Hood's Pills cure constipation and all its results, easily and thoroughly. See All Druggists. Prepared by C. I. Hood & Co., Lowell, Mass. The only Pills to take with Hood's Sarsaparil.

Hood's Pills

Martincourt & Co. Always Lead.

Have you been looking at buggies and wondering how they could be made for the price the dealer asked you? If so, then call at our store and you will think the manufacturer stole the material to make them of, when you see good buggies for the price others sell shoddy for. We never buy a cent's worth on time. Have been in the business many, many years. We know what we are selling and tell you straight. "Never misrepresent or try to get rich off our customers," has always been our motto and has built up for us the largest trade in Western Pennsylvania. No difference what you want about your buggy, wagon or harness, come here and see the largest stock in our line you have ever seen, at prices below what any other firm does or can make. It won't cost you anything to try it and satisfy yourself.

Thankful for past favors, we are, S. B. Martincourt, S. B. MARTINCOURT & CO. J. M. Leightner, 128 East Jefferson St. Butler, Pa.

LATEST STYL! GOOD WORK BEST GOODS FAIR PRICES!

These are the things that have enabled me to build up a first-class tailoring trade during the last year. We have the most skillful, painstaking cutter; employ none but the very best workmen; handle nothing but the very best goods, both foreign and domestic; and guarantee you perfect satisfaction in each and every particular, and for all this charge you simply a fair living profit.

J. S. YOUNG,

Tailor, Hatter and Men's Furnisher, 101 South Main Street, opposite Hotel Lowry.

USEFUL ARRANGEMENT. How to Ventilate Box Stalls at All Seasons of the Year. Where box stalls are constantly in use there are many days, not only in summer, but in winter as well, when it is a serious problem to keep the inmates comfortable. There may be a ventilating shaft in each stall, and a small window, but even with these exits for overheated air there will be days when the inmates of box stalls will suffer for a fresh circulation of air, particularly in winter, when it is not always practicable to open stable windows.

THE WICKEDNESS OF SLEEPING.

Some of the notions which were entertained years ago. That idea is almost dominant in religious society of our age, and some times assumed forms which, if not ridiculous, were at least quaint. It was, for instance, held to be wrong to sleep in a chair, and to sit in a chair, not as is now vainly imagined, from any ignorant idea as to the injury done to the figure, but because "holiness" required that one should sleep in a strictly regulated time, which, according to modern hygienists, was too short, was a mark of sluggish self-indulgence, and it was held, therefore, with moral reprobation.

Washington's Old Spectator.

In examining the directory, one cannot help but notice the confusion of names of streets, and the confusion of numbers. For instance, there are four Pleasant streets in Washington, two Pleasant streets and Pleasant Plains thrown in. There are six Prospect streets, and six streets in various parts of the town, and Prospect hills are as numerous out in the District as Fairview school houses are out in Indiana.

Left One Thousand and Odd Descendants.

There may frequently be seen about the streets here a half-breed Indian who comes in from across the mountains, with a pack on his back, containing baskets to sell, says a Saranac Lake correspondent. His name is Maconber. The tribe to which he belongs holds a large tract of land in the mountains of the Five Nations. The reservation is known as Caughnawaga. His grandfather has died recently, aged 103, leaving a large family of grandchildren, great-grandchildren and great-great-grandchildren. The old Indian had been married three times.

What you want to know.

"What you want to know," said the publicist, "is whether you are a 'man' or a 'woman'." "I know it," was the answer. "It is depending on getting you to take this horse so I could come down out of the attic and do my work on the parlor floor hereafter." -Washington Star.

His Post of Danger.

"For three months during the war I occupied the most dangerous position in my company." "Indeed?" "Yes; every morning I carried the eight miles between our commissary." -Chicago Record.

He Hopes His Now.

"Does your papa get much practice?" asked the visitor of the doctor's seven-year-old son. "Oh, he doesn't have to practice any more," replied the boy; "he knows how now." -Tit-Bits.

They Agreed.

Warden—What did you do with the constipated papers of that burglar? Sheriff—Filed them away. Warden—So has the burglar. He has filed a writ through the window of his cell. -N. Y. World.

It Cost Him His Life.

Sympathetic friend—Your lawyer's charge was very high, I presume. Convicted Murderer—Yes; but the judge's charge was what finished me. -Chicago Record.

FARMERS WHO SUCCEED.

Three Types of Agriculturists Found in the Western States. Farmers are divided into three classes: First, those who take up with everything new in grains, vegetables, fruits and machinery without stopping to think or studying the demands of the market, the possibilities of their soil and the types of the climate. Invariably they fail. The second class are those who buy or produce anything new in the way of grain, etc., use the same implements as their fathers did, irrigate only when the spirit moves them, let their cattle run around the straw pile in winter, feeding them a few rubbins; make all their butter like summer and use the old dash churn. They are homely like a cow's tail, inasmuch as they are always behind.

The third class are those who think, study their market and soil, begin on a small scale and experiment until the problem is solved. If a new fruit is introduced, they first grow it on a small scale, and when they see the market prices they buy but one and see if it suits their soil and climate. They will not set out a peach orchard in a swamp or a plum orchard on a hillside. They will not underlay with gravel. This class is the one that is making money at farming—the other two are in the background. One and two are both bound for the same place, but seemingly traveling in opposite directions.

BETTER SHEEP OUTLOOK.

We have now more vigorous stock than we ever had before. The low prices of wool and the use of shoddy, with the introduction of large quantities of inferior wool from Argentine and the British provinces, have led the few sheep masters we have left to turn their attention more to the quality of their stock, and to the production of good mutton has led to the selection of the best breeds for this purpose. They believe in the more careful preparation of lambs and mutton sheep for the market.

It is Cheaply and Easily Made, and Not to be Overlooked.

I send description of a farm gate, cheaply and easily made, strong and not apt to sag. I have made several for myself and am well pleased with them. The hinge piece is 4 feet 6 inches long, 3 1/2 inches round at the ends, and banded to prevent splitting. A round rod three-fourths inch in diameter and about 5 inches long is inserted in each end about 3 inches; in the lower rod or pivot should have a flange welded on 1/2 inch from one end. At the foot of the post stick a block of wood (or stone) so that its upper surface will be level with the ground. In its upper surface mortise a hole about 2 inches square and 1 1/2 inches deep; in the bottom of this hole lay a piece of an old buggy spring 2 inches long; on it place a blank seven-eighths-inch nut. This will be a step for the gate to be pivoted on. Set the gate in the step; take a piece of plank about 18 inches long, bore a three-fourths-inch hole in the top, and pivot on the hole on the top of the gate post. Spike it securely to top of gate post. The gate swings in either direction, and does not pull on the post so hard as if hung on hinges. -Ohio Farmer.

AGRICULTURAL NOTES.

The Wisconsin station finds 100 pounds of wire produces as much pork as 15 cents worth of corn. A sheep grower says that when lambs are tormented with ticks they will drop down on the ground and try to bite their heads and bellies in the most frantic fashion. Prof. Shaw, of the Minnesota experiment station, cautions farmers to grow peas on land that has a clay subsoil, and states that they will not thrive on sandy soil.

Best Time to Sell Hogs.

When to sell hogs is a mooted question among farmers. One writer advises to sell hogs when the most money can be got for them at the least outlay. The ups and downs of prices we cannot control, but by careful attention to feeding and the use of hogs will make close to a profit or not, there ought to be a change of ration or an immediate sale of marketable stock. It doesn't do to hold beyond the time of profitable growth and fattening. Most successful farmers believe it pays best one week to sell hogs when the most money can be got for them at the least outlay. The ups and downs of prices we cannot control, but by careful attention to feeding and the use of hogs will make close to a profit or not, there ought to be a change of ration or an immediate sale of marketable stock. It doesn't do to hold beyond the time of profitable growth and fattening. Most successful farmers believe it pays best one week to sell hogs when the most money can be got for them at the least outlay.

Testing a Horse's Age.

"The popular idea that the age of a horse can always be told by looking at his teeth," said a veterinary surgeon on Michigan avenue, "is not entirely correct. After the eighth year the horse has no more new teeth, so that the tooth method is useless for telling the age of a horse which is more than eight years old. As soon as the set of teeth is complete, however, a wrinkle begins to appear on the upper edge of the lower jaw, and a new wrinkle is added each year, so that to get at the age of a horse more than eight years old you must figure the teeth plus the wrinkles." -Chicago Tribune.

Married Lady.

"Married Lady—That depends on whose mind it is.—Texas Sifter. Saw the Effects. Johnny—Mamma, why do they call it a man's party? Mamma—Ask your father—I think it is on account of the horns.—N. Y. World.

It All Depends.

Unmarried Lady—It must be a great thing when husband and wife are of one mind. -Chicago Record. He Has Him Well Trained. "What may I see to-day, doctor?" "Anything you like." "What may I like, dear Eulalia?" -Fliegende Blätter.

By Contract.

How dull are the tricks of life! Truly, most to equal one. Man dreams of a little wife And marries a tall one. -Chicago Record.

WEIGHT OF CATTLE.

It Has Steadily Increased Since the Beginning of the Century and the Reason is This. In the beginning of the century about to close cattle were dressed at the weight of 400 pounds net, or less. In 1850, as was shown by historical and statistical, they were killed at a weight of 450 to 500 pounds, at four years of age. In a few years from now the great heavy frame-bred carcasses of the Texas steer will have disappeared, and instead of these we will have the short-horns, the Angus and the Herefords, or their crosses.

It is surprising how early in life calves, when raised by hand, will learn to eat, or rather lick up. If a calf is weaned directly it has drawn the milk once or twice after birth, and is taught to drink milk from the pail, it has no further use for its dam than to have her furnish at first new milk, and, subsequently all the skim milk it can assimilate. At four weeks old it will lick salt, if taught, and dry lam. At six weeks of age a hand-fed calf, if properly managed, can be weaned, and so on until the calf is a year old. It is a baker's dozen of calves. They drink at proper age, all the milk in any shape, and then they were fed a half bushel of corn and cob meal, and I never saw a finer lot to turn out to pasture the next spring. They were large and in fine condition.

GOOD SUBSOIL PLOW.

How to Make One Which Does Perfectly Satisfactory Work. The following description of a home-made subsoil plow which does perfectly satisfactory work when made strong enough is condensed from the Country Gentleman: Some 15 months ago I had occasion to visit a brother gardener in the western part of the county late in the fall, and found him using a home-made subsoiler that exactly met my ideas of what such a tool should accomplish. It was a straight beam of hard wood three by four inches in size and about six feet long, supported with an ordinary plow-wheel at each end, and carrying on either side between the wheels a stiff steel shank, which in turn carried a steel wedge-shaped shoe. The shank of each shoe was a piece of moving-machine cutter-bar, about five inches of an inch thick and three or four wide.

MODERN STOCK BARN.

Novel Construction is Shown in the Design Here Illustrated. The silo has changed the entire conditions of feeding on many farms. Bulky material, such as hay, which the laborer cannot afford to buy much at the prices at which it retails; and yet the quotations run from \$2.50 to \$4.00; since it shows up on the farm at a lower rate than it does at present. The country butcher cart is seen in the lanes and on the farms as often as needed, and probably the farmers have beef at reasonable rates. Besides he can, if he manages correctly, have a lamb, a pig, or some fowls, and need not starve for want of fresh chickens. W. Murfield, in Journal of Agriculture.

PIG PEN PROVERBS.

When a sow proves valuable as a breeder do not part with her as long as she remains useful. By keeping a pen liberally supplied with dry earth, bad odors will be prevented and the value of the manure increased. So long as there is good pasture it is hardly an economical plan to confine the hogs in a close pen, even when fattening for market. When the pigs get to testing regularly, they should be taken out to feed more than they will eat up clean, unless the pens can be arranged so that the sows can be let in to eat up the leavings. In selecting a breeding sow or boar, always choose the pig with a long body, wide back, and whose back and belly or upper and under lines are straight and parallel. Such are much more apt to prove desirable than chunky ones, however smooth. -Colman's Rural World.

Best Time to Sell Hogs.

When to sell hogs is a mooted question among farmers. One writer advises to sell hogs when the most money can be got for them at the least outlay.
