venient and cheap. This is very satisfactory to the grower. A pit of a high dry place, a few feet from the water, is essential. The pit should be lined all the better with a layer of straw, and a layer of earth. Where only a few plants are to be raised, a pit of a few feet square is enough, but it can be made as large as desired.

Dig out to a depth of about a foot, and throw the soil to a depth of about a foot so as to have it level on the sides of the pit as you dig. For the frame work use a few four inch planks, and for the sides use a few two inch planks. The end of the pits should be open, and should be made of the soil. The soil should be packed in with a trowel, and should be made of the soil.
