Ice Cream and Hot Pie.

"Well, I've waited on gentlemen, la dies and children for twenty-five years," said a waiter in a Broadway restaurant the other day, "and I've seen some queer dishes and some people with queer tastes in that time, but I never saw any one do a thing like that," and mark. "It looks like ice cream." "Ice cream it is, 'said the waiter, "sure enough. But what do you think is

under it?" "Give it up." was the reply. "And well you may, sir," said the man with the swallowtails and napkin, "for you might have guessed for a week and not hit if. "It's a piece of apple pie made as hot as can be in the oven. He scooped the ice cream over the top of the pie and it almost hissed. Then he began to eat the mess with a spoon before the cream could melt more than just a little, and he really seems to revel in it. It beats all what people will do to their insides," and the waiter bustled forward to seat a young woman, pretendget into his overcoat without assistance. -New York Tribune.

Railways' Consumption of Timber.

The round total of timber ties in use on railroads in the United States is nearly 516,000,000, and 80,000,000 are annually required for renewals. Including bridge and trestle work the annual consumption of timber on railways is computed at 500,000,000 cubic feet, requiring the cutting of the best timber from over 1,000,000 acres of forest land per annum. To meet this demand, under our present wasteful management of timber land, the area to be preserved for this purpose would probably exceed 50,000,000 acres, or more than 10 per cent. of our present forest

Usefulness of India Rubber. Rubber enters largely into the man-

ufacture of artificial flowers, considerable quantities of which are made in this country, and artificial limbs owe much of their flexibility and adaptability to this material. It is the only substance that imitates the ankle tion of the human foot, and rubber hands are made so perfectly that many cripples are able to write by their use. The manufacture of smokeless powder has hitherto had most injurious effects on the health of those employed in it; but now the men have been provided with rubber masks, which protect them from the fumes thrown off by the chemicals entering into the composition of the powder. One of the most admirable uses to which rubber has been put is for horseshoes; it is not only light and durable, but it markedly improves the hoof.-New York Commercial Advertiser.

Reading During Meals.

To read during meals is commonly reckoned as physiologically erroneouswe won't say as absolutely injurious. The theory is that, as the stomach and other organs require and exert nervous power during digestion, it is better to allow nothing to interfere with their work. We do not say this can be borne out, but the feeling of satisfaction that follows a meal, and which is often ac-companied in good health by drown-ness, probably indicates that a certain amount of nervous exhaustion oc during digestion. The pleasant ch a dinner party is probably of physiologically as supplying a mental stimulus, without making severe demands on brain and a If any evidence exists at all on the ject, we think it tends to discourreading at meals. -Herald of Heal
