

## UNION RELIGIOUS SERVICE.

An Impressive Easter Celebration at the Opera House Last Sunday.

Classical Music Artistically Rendered By Local Talent—Details of Programme.

"In union there is strength," was admirably illustrated in the union religious service for Easter held at the opera house on Sunday. It was a union effort, not only of the various religious denominations of the city, but of many citizens who make no claim to being formal Christians; and while the stage, which was beautifully decorated with flowers and plants, accommodated the Choral society of nearly 100 voices the orchestra and the ministers of the gospel of all the sects represented here except the Catholic and Episcopal, the auditorium was thronged as it never was before by an audience comprising "all sorts and conditions of men," every one of whom was impressed with the solemnity of the occasion, so that it seemed that a deep religious fervor had possession of every heart when the service was fairly begun.

The perfection of the work of the Choral society was a surprise to everybody. The society was organized about six months ago through the zeal of Mrs. Rolfe, Mrs. Tracy, Prof. Jackson, and a few others, so that its time for practice and training had not been sufficient to warrant anyone in expecting a performance so even and artistic. Every member of the society is deserving of praise for the excellent work done on this occasion. In order to fully appreciate the merits of the undertaking the class of music performed must be considered. In Dudley Buck's grand anthem, "Christ the Lord is Risen Today," Miss Eva Connor sustained the soprano part with wonderful effect. This piece gave the assemblage a foretaste of what was to be expected and prepared the way for the earnest and spiritual invocation by the Rev. John Reid, Jr. The great compass and pure quality of Miss Connor's voice were given fuller scope in the opera house than she has enjoyed in any of her previous appearances in this city, and the other parts by Miss Iota West and B. H. Jones were also finely rendered. The chorus sang in perfect time and voice throughout this selection, and on any secular occasion would have received an encore such as would have cheered the hearts of professionals. Here perfect stillness reigned, and like an inspiration in the midst of peaceful contemplation came the opening prayer by Mr. Reid of the Presbyterian church which sank deep into every heart.

An anthem from Rossini's "Stabat Mater" was the next selection, Mrs. Rolfe leading with the soprano part. This lady had been indisposed for several days and left the house for this service against the advice of friends. But in spite of a slight weakness of voice due to illness she sang the number with touching pathos, showing by her artistic phrasing and execution that she possesses a finely cultivated voice. In this piece the chorus also distinguished itself, as did the accompanists, and orchestra.

Of the eighteen numbers on the programme five were hymns sung by the entire congregation. These were selected by Professor Jackson with special reference to their being the most familiar ones in the hymnal. They were sung with a spirit that did everybody good in that vast audience, the trained singers and orchestra aiding in each.

The other classical numbers were: Chappell's anthem, "Christ Our Passover," "An die Vater des Himmels," sung by Mrs. Rolfe; Sullivan's anthem, "I Will Mention Thy Loving Kindness," tenor part by Prof. Jackson; anthem from Gounod's "Redemption," and the "Hallelujah" chorus from Handel's "Messiah." Professor Jackson's sweet and finished tenor brought tears to many eyes. There is a pathetic strain about the voice which thrills all hearers, and while the professor's advancing years have diminished its strength and volume, its quality remains as clear as a bell.

One of the musical features of the service which was greatly enjoyed was the violin solo by Madame Ericke. She is an artist of rare ability, and the only regret was that an encore was not in order. The vocal and Chickering grand piano played by Mrs. Tracy and Prof. Lovillard added much to the effectiveness of the orchestral accompaniment, the vocalists especially lending a richness of tone such as could not be produced by any other instrument.

As a musical director Prof. Jackson has few superiors in this country. The complete artistic success gained by the Choral society in this beautiful service is admitted by all to be largely due to his careful training and the sympathetic interest that he has taken in the society. His direction was masterly throughout, leaving nothing to be desired in this respect.

The brief remarks by the Rev. J. D. Esild of the Congregational church on "Immortality" should have been heard by all present, but the speaker did not realize the size of the building and therefore failed to make himself heard by a large part of the audience. His remarks were calculated to set people to thinking of a better world than this, and to take them away from the sordid things of life to better thoughts and higher aims.

The service as a whole was a notable success, and will always be remembered with satisfaction by those who were present.

About 12:30 Tuesday night a fire was discovered in the outbuilding adjoining the Arlington hotel in North Great Falls. The fire had gained considerable headway when discovered and it took the united efforts of the employees and guests to save the hotel from destruction. As it was the end of the hotel next to the out-house was badly scorched. The damage is placed at \$100 and is fully covered by insurance. This is the second fire in North Great Falls this week and there is no doubt but both fires were incendiary and vigorous efforts should be made to capture the scoundrels.

## FOR GOLD AND GEMS.

A Company That Will Add to the Prosperity of Great Falls.

The officers of the Missouri River Gold and Sapphire Mining company, which has its headquarters in this city, held an adjourned meeting last Thursday evening for the transaction of business relative to operations the coming season.

The operations of this company will be watched with peculiar interest by the citizens of this section, as it is incorporated for the purpose of placer mining by hydraulic and other methods the numerous bars, both upper and lower, contained in the lands owned by the company which are situated in Cascade, Lewis and Clarke, and Meagher counties.

Some of the lands alluded to lay alongside the great English Sapphire company. The lands secured by this company have been very generally tested by the rocker process, and have been so successful that even by this crude method the ground will pay for gold placer working. These tests also showed in places the presence of sapphires, rubies, various forms of corundum, spinel, etc., showing it will be profitable to save these gems and thus add to the profits of working. The company intend to commence working these bars this season by improved processes for saving fine gold and gems which works will be under the immediate superintendence of Messrs. John W. Harvey and George Travis, well-known gold placer miners of over thirty years. This will be significant that the fans of the company will be judiciously spent in necessary workings and not wasted by inexperienced operators.

The lands owned by this company comprise a large area taken up under the mining laws of the United States, and extend from near Craig down below the town of Cascade. It is, therefore, essentially a home institution, having John P. Dyas as secretary and treasurer with headquarters at Great Falls. Fifty thousand shares of treasury stock is now for sale at the office of John P. Dyas at the nominal sum of five cents, price of same to be doubled in thirty days.

Prof. O. C. Morrison of this city, being interviewed regarding this company, stated: "I have examined the gem stones already found by this company, and they are true sapphires, rubies, and spinels, with two or three forms of corundum. They are of unusually good color and unfractured. I am well acquainted with many of the bars owned by this company, some of which can be worked by sluice, others by dredge, and still others by the McIntyre wheel. I see no reason why after high water the shares should not be dividend paying, and as I understand this company are going to prospect the various bars till that time. I am certain some rich pockets will be located by that time, that will astonish even old timers of the neighborhood. The gold is there, and the gems are there, it is only a matter of selecting the process to save them the quickest, and cleanest. It would be strange indeed if the Missouri canyon, whose river drains the richest gold fields in the United States, should not have left a large number of precious deposits, and it would be stranger still if gems were not found in large quantities, when we consider that only a few miles further up stream, the placer miners for 25 years had been dumping them in the river with the tailings from the various gulches."

### An Easter Dinner.

The Easter dinner at the Park hotel was one to surprise any sojourner in this part of the world. The bill of fare is given to convince the outside world that we are civilized out here.

H. A. Smith arrived here yesterday from Minneapolis to act as wheat buyer for the Royal Milling company. Mr. Smith has been employed in a similar capacity by the St. Anthony and Dakota Elevator company at Minneapolis. He is surprised to hear of the great yield of Montana lands, and says he will move his family out here as soon as he gets the elevator in working order and has time to look about a little.

## HIGH WATER DOWN THE RIVER.

Fortunate Escape of a Private Party on the Great Northern Road.

Narrative Given by One of the Company on Arrival at Helena.

A party of gentlemen arrived in Helena Sunday night over the Montana Central who had an experience the night previous they never will forget, says the Independent. The party was composed of H. C. Davis, assistant to President Oakes of the Northern Pacific railroad; O. H. Ingram of Eau Claire, Wis., president of the Empire Lumber company and of the Eau Claire National bank; Wm. Carson of Eau Claire, president of the Valley Lumber company of that city; T. H. Long of Eau Claire; A. W. Pettibone of LaCrosse, Wis.; Major W. H. Day of Dubuque, Iowa; Messrs. Gro. and Jas. Dulaney of Hamulba, Mo., and Mr. L. Oershel of Livingston. All the gentlemen save Mr. Davis and Mr. Oershel are heavy capitalists and lumbermen, and the party are on their way to the sound to investigate the feasibility of starting large industrial enterprises there. They left St. Paul via the Northern Pacific, traveling in the special car Minnehaha, which was attached to the regular train. Arriving at Fargo, they found they could not get through in their car, owing to a washout, so on arriving at Jamestown the car was transferred to a branch line and run up to the Great Northern, the intention being to continue west on that road.

During the past week high water has been prevalent along the line of both roads, but no great difficulty was experienced on the Great Northern in eastern Montana until Saturday. It was just 10 minutes after midnight Saturday when Mr. Davis and his party were awakened by a jar, and the next moment the car turned over. Those on the upper side were thrown out of their berths into a flood of ice cold water, and those on the lower side were submerged. The first man to get his head up was Mr. Davis, who was thrown into a corner. He got upon his feet as soon as possible and began to move toward the rear door. The water was rushing in through a broken window, as well as through the ventilators. Slowly and carefully picking his way along, sometimes with the water up to his hips and again with it up to his neck, cutting his feet at almost every step with broken glass, he at last reached the door. Fortunately the car was well built, being one of the heaviest and best in the country. In turning over the hinge side of the door was up, and Mr. Davis, after several attempts succeeded in getting hold of the knob and opening it. Placing a chair under it so as to keep it open, he got out, and went to the sleeper, distant about a hundred yards. He had on only a night robe and his feet were cut and bleeding from their contact with the glass and with the floating particles of ice. Some of the trunks took off the garment he had on and wrapped him in a blanket. He was so chilled he could hardly stand and his feet were cut so badly he could not walk back to the overturned car in which his friends were imprisoned, but he stood on the roof platform of the sleeper until they were all rescued. There were eleven people altogether in the private car, Mr. Davis' party and a colored cook and porter. The first person out after Mr. Davis was the cook. He came up through a window with the water dripping from him. Asked where the others were, he replied: "I see only one dead saved." Had it not been for the self-possession of two Missoula gentlemen and the hard work of the trunks, the colored man's statement would have proven true. Among the passengers on the train was Deputy Sheriff Woods and Will Murphy of Missoula. Mr. Woods, as soon as he could get through a window, dropped down into the icy cold water in the car, and standing in it up to his waist, he told the unfortunate out, who had on the roof in the water over half an hour, to climb on his shoulders and in that way they were rescued. Mr. Murphy stood at the car and assisted them as Mr. Woods aided them from the inside. They were all rescued, and strange as it may seem, none were seriously injured, cut feet and bruised limbs being their greatest misfortune. Most of the gentlemen in the party are 50 years of age and upward, and none of them yesterday showed any ill effects from their prolonged icy bath. The party left in the car in the way of money, watches, etc., about \$1,000, and up to yesterday they had not heard whether it had been recovered or not. It was a most miraculous escape without loss of life either from drowning like rats in heat, or from the effects of the prolonged stay in the water, which was filled with ice.

The place where the accident occurred was between Wolf Point and Oweego. All the water came from the backing up of the Missouri. The engineer was thrown from his seat and rendered unconscious, the front platform of the mail car was broken off and the front trucks of the same car were off the track. It is supposed the whole train jumped the track, and then by some peculiar freak all the cars save that

carrying the mail and the private coach in the rear jumped on again. The entire party with Mr. Davis unite in their praise of all the employees of the train for their kindness and consideration after the accident.

## THE MINNESOTA LEGISLATURE.

Again Looking After the Alum and Ammonia Baking Powders.

[St. Paul Pioneer Press.] A bill for an act in relation to the manufacture and sale of baking powders to prevent fraud and preserve the public health has been introduced in the legislature at St. Paul. The bill is intended to prevent the adulteration of baking powders with alum or ammonia, imposing proper penalties to enforce the law etc.

This shows an earnest desire on the part of our state representatives to protect their constituents.

The Chicago Tribune, referring to the question of legislation on alum and ammonia baking powders says: "It deals in a direct manner with an evil that must be cut down."

Dr. Chas. W. Drew, chemist for the Minnesota State Dairy and Food Commission, in his elaborate report of 1902, gives a list of one hundred and seventy-three different brands of alum baking powders alone sold in Minnesota.

Following is a list of the more widely known brands that Dr. Drew, as well as other chemists of high standing, have examined and found to contain alum, and some of which contain both alum and ammonia. Many of the alum and ammonia baking powders are labeled and advertised as "absolutely pure" to mislead the public.

"Calumet," "Forest City," "Grant's Baking Powder," "Globe," "Puritan," "Snow Ball," "Government," "Palace," "Royal," "Columbia," "Home," "Monarch," "Unrivaled," "Chicago Yeast," "Echo," "Zapp's Crystal," "Perfection," "White Rose," "Hatchlet," "Crown."

In addition to above list, there is a multitude of brands sold with a price. It is safe to reject all baking powders sold with a price as the tests show they are composed largely of alum and cost but a few cents a pound. Also refuse any baking powder sold for twenty five cents a pound, or less; it is sure to contain alum.

Surely nothing but cheapness could induce the public to experiment with these impure powders at the risk of health. Aside from the question of the health or wholesomeness of the condemned powders, and viewed from the standpoint of economy alone, a pure cream of tartar baking powder like Dr. Price's from its greater known strength and unquestioned purity will prove more economical to the user in every way.

## NEIGHBOR NEWS SUGGESTS.

No Lack of Life and Enterprise at the Belt Mountain Metropolis.

NEIGHBOR, April 1.—[Correspondence of The Tribune.]—C. P. Downing, E. G. Macley and P. M. Hughes of Great Falls came up yesterday's train.

E. J. Barker has been sick for several days with a severe attack of the grippe. After a flooding season of twenty consecutive weeks the fine weather of the past few days has caused the snow to disappear from our streets and wheel ed vehicles are once more seen.

Myrtle McDowell is sick with fever and George L. McGibbon is dangerously ill with an attack of pneumonia.

A musical entertainment is soon to be given by the amateur talent of the town under the direction of A. M. Lewis.

Twelve cars of ore were shipped this week, the Moulton sending out nine, the Queen of the Hill two, and the Galt one.

Prof. C. C. Lyon, who has had charge of the city schools for several months, has been compelled to resign on account of ill health and departed for his home in Minnesota a few days ago.

The night shift at the Moulton on Wednesday of last week broke all previous records at that mine by taking out 35 tons of first-class ore. They are now sinking on the main shaft and have reached a depth of 450 feet.

Supr. McAssey, of the Galt, yesterday exhibited a specimen of silver from that mine which many mining men of long experience pronounced the best that had ever come under their observation.

The parties who are negotiating for the purchase of the Broadwater, in which such a rich strike was recently made, have had a party of experts at work on the property for several days. Their report will be made public about the 15th of April, and there seems little doubt that the negotiations for the purchase of the mine will be brought to a successful issue.

Erick Damm, an old-time prospector, died on Thursday morning of pneumonia brought on by exposure. He had accumulated property of considerable value and had a policy of insurance on his life for \$2,000 in favor of his sister in Hamburg, Germany. He had held no communication with his family since he left home twenty years ago, and whether any of his relatives can now be found seems a doubtful question.

There seems to be no abatement in the efforts of our citizens to secure the erection of a quartz mill and another meeting will be held next Friday night, at which time several milling men will be present to submit propositions.

The Neihart Gun club had a shoot a few days ago, at which several of the members entered the contest for the prize—a gold lapel button. It was won by P. E. McEowan, who scored 22 out of a possible 25, which, under the rules governing the contest, was a remarkably fine score. Pete is a spile did shot, and will enter the contest at Helena in June.

## IS IT A FIREBUG?

Residents of North Great Falls are beginning to think that a fire-bug is at work in their town. The origin of the big fire of Monday night has not been discovered and on Tuesday night another fire broke out between midnight and 1 o'clock at the rear of E. J. Bourdon's hotel, which was extinguished with the greatest difficulty when it seemed that the entire hotel property must be destroyed. There is some hope, however, that the culprit can be caught, and a close watch will be kept for him from this time on.

## THE CHANGING STYLES.

Violates the Rage for Hat Trimming—A Dress and How to Make It.

Starting out to give the readers of The Tribune a weekly article which shall be in every way a lesson in dress, I begin with a hat, and a sketch of it is shown herewith. It is made of changeable brown and green velvet. On the brim, against the crown, a twisted roll of the velvet is put, while bows and loops of the same lie on the brim, which is a little narrower in the back than in

A BOUND VELVET HAT.

front. On one side there is a bunch of ostrich tips.

There seems to be almost a rage for violets as hat trimmings and they are frequently used so profusely as to compose nearly the whole hat. Violets and amaranth are a favorite combination. Sometimes there will be four bunches of the former set at the four corners of what is almost a square bonnet, and a fan-shaped arrangement of the mimosa in front. Such a bonnet will be made of black lace and jet, or the crown will be out of jet with a little fluting of lace sticking out therefrom. Jet is a great deal used in combination with colors. Sprays of jet will form the sides of a bonnet, the front of which consists of fern flutings of light black lace, little posies of cowslips being inserted back and front, or, perhaps, cowslips in front and tufts of violets behind. Pencil arrangements of this kind are preferred to straw bonnets, though straw crowns of some bright color, such as green, amaranth or old rose, will be set in a pompadour of white or black lace, the whole being finished by a cluster of velvet roses or other flowers in front, or fern flutings of lace, fastened by a brooch in which imitation emeralds, amethysts or rubies glitter.

The line of demarcation between the hat and bonnet is very slight, many of the former being hardly bigger than bonnets; still they always have a brim, however narrow, which overshadows the brow somewhat. There is a great fancy

A VISITING DRESS.

just now for black lace hats. The lace is supported on invisible wires, and the whole construction is as light and diaphanous as possible.

The dress of my second picture seems to be in prime style, but in reality it is separate skirt and waist. The material is black and yellow changeable satin tulle, dotted with yellow. The skirt is gored and the seams are trimmed with narrow rolls of sage-green velvet, and the bottom has three rows of black satin. The inside has a pink ruffle of black silk and the whole skirt is lined with silk. The waist comes over the skirt and is finished with a belt of sage-green velvet, very wide at the left side and gradually narrowing to the right. The lining looks in the middle but the stuff bodice looks at the left shoulder and side. For this reason quite a large space of the lining must be covered with the goods so that the former will not show. And part of the waist between the yoke and the belt has a folded piece of satin. The yoke appears only in front and is made of finely tucked d. satin tulle, finished with a band of black satin and trimmed with a lace ruffle and tiny bows of satin ribbon. The cuffs of the sleeves are tucked like the yoke, and the upper sleeves have a lining of sage-green silk draped with black silk net. At the elbow, falling on the cuff, there is a flounce of black lace tied with black satin ribbon. The armholes are also trimmed with a band of satin ribbon. The back is cut in one piece and shows no seam.

There is trouble ahead for the girl who sits on her foot if crinolines are to come in. It is bad enough now when we wear short petticoats with lace on the edge. As it is now, if a girl's heel does get caught, she can tear it free, but if she gets caught in a hoop and tries to kick down one side, won't it fly up on the other?

## The Allen-Hall Contest.

Allen, the puglist, arrived in town the other day from Helena, where he has been working hard to get into shape for his contest with Hall. He is in excellent form. Hall has not been overlooking anything in the training line and is in first class condition. A good, clean, scientific mill is guaranteed by St. George Manager Davenport of the Park theatre on next Saturday night. Ample arrangements are being made for a substantial crowd and give everybody a good chance to see the match.

## OUR GREAT IRON DEPOSITS.

Some of the Mines to be Opened up and Worked This Spring.

A Live Enterprise to be Set on Foot by Practical Men.

Another industry will soon be started in Great Falls which promises to exceed all others in importance and will furnish work for a great number of men. It bids fair also to return large profits to the owners, who are citizens of this city. N. P. Nelson, in company with J. B. Steffen, has discovered and located an iron mine 55 miles from Great Falls and only 14 miles from the Montana Central railroad. They have named their properties the Great Iron Mountain, North Star, Eureka and Bismarck. The ore has been assayed and turned out from 55 to 58 per cent, which is a remarkable showing, as this ore was taken from the surface, and experts claim it will make iron and steel equal to the Swedish product. The iron ore in Colorado assayed only from 25 to 35 of the same quality and it has been successfully worked and made to pay large profits and there is no reason why this cannot be worked so as to yield even larger profits to its owners.

The owners intend to erect a blast furnace this spring for the smelting of their ore into pig iron. All iron used in the northwest is now produced in the east, the nearest point being Lake Superior and Colorado, and as there is a very extensive market in the northwest—iron states and territories and British Columbia, which are now being supplied with eastern iron at large expense, which is a continual drain on western finances and if left here would greatly add to the wealth of Great Falls and surrounding country.

As there is a large market for iron and an unlimited supply of ore the prospects of getting a blast furnace this spring are very promising. Just where it will be located has not been decided yet, but it will be in the vicinity of Great Falls. As soon as erected and in operation the next move will be to establish a rolling mill and steel works for the production of bar steel, iron, etc.

It is claimed by experts that the cost of mining and putting on cars will not exceed \$1.25 per ton, and as there is an abundance of cheap fuel there is no reason why it will not be a paying business to its owners and a great benefit to Great Falls.

## SPRAY OF THE FALLS.

FROM TUESDAY'S DAILY.

J. W. Searles, live stock agent of the Great Northern, arrived in the city yesterday and will make this his headquarters.

A United States patent to Oscar Swanson was received yesterday for 100 acres of land in section 26, township 17 north, range 7 east.

A patent from the United States to Wilhelm Wiegand for 158 acres in section 2, township 20 north, and section 35, township 21 north, range 1 west.

The railroads have agreed on a fare rate for the round trip to the meeting of the Stock-Growers' association at Miles City Wednesday, April 10.

John Sinclair left for Chicago yesterday to make arrangements for exhibiting his collection of animal birds, at the world's fair. He will be absent about ten days.

Hilla, daughter of Samuel Larsen, aged 2 years and 6 months, died on Sunday and was buried yesterday in Highland cemetery. Mr. L. resides near the B. & M. smelter.

The new furniture ware room of A. P. Curtin & Co., corner of Third avenue North and Park drive, is being built by Geo. Goodall and will be ready for the storage of goods in a few weeks. The building will be 50x150 feet.

The Great Northern trains from the east have been delayed by high water in the vicinity of Brookway where the track has been submerged and the embankments undermined. A train got off the track on Saturday, but no one was badly hurt.

Benjamin S. Cory of Helena came in from Chinook yesterday. He represents the firm of S. C. Cory & Co. and says that business is showing signs of improvement in all parts of the state. Mr. Cory thinks that the season will be an active one for trade here, and that next fall will see flush times.

M. J. Maloney, aged 10 years, died at the Sisters' hospital yesterday morning of pneumonia. The deceased had been a resident of Great Falls for about seven months and was employed as roadmaster on the Montana Central between this city and Havre. The funeral will take place this afternoon from the Catholic church.

The foundations of the Townsite company's great power house at Black Eagle falls are progressing finely under the constant labor of a large force of men. The construction of these foundations is the most difficult part of the work as excavations have been made to the bed-rock and a portion of the river had to be displaced. It is expected that the Royal mills will be connected with this power by July 1.

There is not the least doubt now that the Burlington railroad will be pushed to Great Falls as fast as possible. Parties who are in position to know say that engineers are now running a line through the Crow reservation from Billings and that it will not be very long before a corps of surveyors will be at this end of the line making locations for depots, etc. The Burlington is coming, and don't you forget it. Hoop la!

## Wanted for Cash.

Second hand Household Goods, Etc. son & Harrington, First avenue south, bet. Fourth and Fifth streets.

Locks repaired, keys made and fitted in any part of the city. M. Spears, 300 Third avenue S., one block south of Millwaukee house.

Insure with Phil Gibson.

## All Other Baking Powders

Leave traces of Ammonia, Alum, Alkali or Acid in the Food.

## Dr. Price's Cream Baking Powder

Is the only Baking Powder that is free from any taint of adulteration or defect.

Dr. Price's is indispensable when perfect work and wholesome food are desired.

Its higher raising power and marvelous purity make it more economical than any other.
