EARTH TO QUAKE

New York City To Be Destroyed by An Earthquake and Tidal Wave Friday, August 17.

WHOLE COUNTRY TO SUFFER

California To Be Made An Island—Prediction Made by a Professor Who Never Fails.

BEIGRADE, July 31.—Earthquake shocks have been felt at Macedonia, Old Serbia and Eastern Bulgaria.

Recent earthquakes in European and Asiatic Turkey, followed by the seismic disturbance in Tennessee, Missouri and Wisconsin, as reported in the telegraphic columns of the TRIBUNE, gives new interest to the prophecies of danger and disaster which have been made during recent years.

The matter, however, would not attract any special attention in this country but for the recent circulation of an alleged prophecy by Prof. Rudolph Falb, of Vienna and Berlin.

There has recently been published in some of the New York papers a statement to the effect that there will be a great submarine earthquake in July or August, 1894, which will overthrow the city of New York by a tidal wave, while Florida and California will be converted into islands.

These publications appear to have created some alarm since it is announced that in view of the terrible dispensations so lavishly to be dealt out a mass prayer meeting with room for 20,000 people, is advertised to be held every Wednesday afternoon at Guttenberg, New Jersey, at 3 o'clock.

The New York Herald takes up the matter and devotes a column to explaining Prof. Falb's method of prediction.

When the sun and moon are in conjunction, or are close together, their attracting or pulling power on the tides is greatest.

It is claimed for Prof. Falb that his predictions always come true, many instances having been cited.

It may also be supposed that the countries liable to be affected will be that part of southern Europe lying between the eastern coast of Asia, Japan, the East Indies and Australia, eastern South America, and the Atlantic ocean east of Newfoundland.

Directly contrary to Professor Falb's theory of earthquakes is that generally received by modern geologists.

They deny the possibility of upheavals from the generation of gases in the crust of the earth or from the formation of steam by the sea of water being brought into contact with the sea of fire.
