Seeing the Difference BETWEEN THE DE LAVAL And Other Cream Separators

THE difference between a modern De Laval and any other cream separator is apparent at first sight. And if you will take five minutes to compare the separating bowl construction, the size, material and finish of the working parts, particularly those subject to wear, the manner of oiling, and everything which enters into the design and construction of a separator as a simple durable machine, you will still further see the difference.

Then if you go a step farther and turn the cranks of the two machines side by side for fifteen minutes, running milk or water through the bowl, you will see still more difference.

And if you will run the two machines side by side in practical use, as any DeLaval agent will be glad to have you do, the De Laval one day and the other machine the next, for a couple of weeks, you will see still further difference in the work of the two machines.

We will consider it a privilege to show the difference between the De Laval and other separators and to afford every prospective buyer the opportunity to try out and prove the difference to his own satisfaction, if on first examination he feels the slightest doubt about it.

If you decide to buy a De Laval, we will give you plenty of time to pay. Terms to suit yourself. We have all sizes on hand.

Bring in your cream. We pay the highest cash price.

Geo. E. Broughton has resigned as town treasurer and Leon Bishop has been elected to succeed him. Mr. Broughton expects to leave Ronan about the 20th, and expects Mrs. Broughton to join him here before that date and together they will make a trip to the coast before returning to Brodhead, Wis., where Mr. Broughton will assume the duties of cashier of a bank.

Farmers all over the big flat are using the water to irrigate their fields of grain and hay. The change the water has wrought in that portion of the valley in the past five years is so marked as to be almost beyond belief. At that time it was predicted that water would never be used beneficially in that section, but today the actual irrigation contradicts that statement to the benefit of every farmer who turns out the water. In a very short time that section will be pointed to as the granary and dairy of the state of Montana.

Miss Alma Kaiser of the Big Flat was a Ronan visitor Tuesday.

R. A. Jensen came home from Butte Monday. He says that all kinds of business is paralyzed in Butte by the Teamsters' strike and those who have gone out in sympathy. A cooks' and waiters' strike was imminent at the time he left that city.

Henry F. Boucher, who has a farm near Round Butte, but who has been living in Minneapolis for the past four years, arrived here Friday last and will make an extended stay. He has disposed of his interests in Minneapolis and is undecided just where he will again engage in business.

The farmers in the vicinity of the Round Butte are busy these days hauling wheat to Dixon. Last Monday over a dozen heavily loaded wheat wagons were seen on the road and it is stated that between 1800 and 2000 bushels are being daily received at the elevators at that station. Two weeks ago it was estimated that 50,000 bushels of wheat still remained in the bins of the elevators of the Round Butte farmers.

DON'T carry around a great amount of currency. If you do you are beset by two great evils. One is the temptation to spend readily. A man with \$100 in currency in his pocket is freer to spend than the man with little currency. He is more apt to break a ten dollar bill than he is to draw a ten dollar check.

The other evil is the bait offered to thieves. A man who is known to carry a large sum of money in his possession never can tell when he will be set upon by a highwayman. The wealthiest men in the country seldom carry large amounts of cash. When you accumulate a goodly amount of currency deposit it in the bank at once.

THAT IS THE SAFEST PLACE FOR IT.
